

AWS Certified Solutions Architect - Professional (SAP-C02) Exam Simulator - SAP-C02 Free Demo & SAP-C02 Training Pdf

BONUS!!! Download part of Prep4sures SAP-C02 dumps for free: <https://drive.google.com/open?id=1YP79qDLFPoG8mLbZ2h9KyRjGUABu5sE>

As we all know that, first-class quality always comes with the first-class service. There are also good-natured considerate after sales services offering help on our SAP-C02 study materials. All your questions about our SAP-C02 practice braindumps are deemed as prior tasks to handle. So if you have any question about our SAP-C02 Exam Quiz, just contact with us and we will help you immediately. That is why our SAP-C02 learning questions gain a majority of praise around the world.

The AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) PDF dumps are suitable for smartphones, tablets, and laptops as well. So you can study actual AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) questions in PDF easily anywhere. Prep4sures updates AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) PDF dumps timely as per adjustments in the content of the actual Amazon SAP-C02 exam.

Our experts update the SAP-C02 training materials every day and provide the latest update timely to you. If you have the doubts or the questions about our product and the purchase procedures you can contact our online customer service personnel at any time. We provide the discounts to the old client and you can have a free download and tryout of our SAP-C02 Test Question before your purchase. So there are many merits of our product. Read the introduction of the characteristics and the functions of our SAP-C02 practice test as follow carefully before you purchase our product.

The AWS Certified Solutions Architect - Professional (SAP-C02) exam is designed for individuals who have already achieved the associate-level certification and are looking to validate their advanced technical skills in designing and deploying scalable, highly available, and fault-tolerant systems on the Amazon Web Services (AWS) platform. AWS Certified Solutions Architect - Professional (SAP-C02) certification is ideal for experienced AWS professionals who have a deep understanding of AWS services and their interdependencies.

Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q250-Q255):

NEW QUESTION # 250

A company stores and manages documents in an Amazon Elastic File System (Amazon EFS) file system. The file system is encrypted with an AWS Key Management Service (AWS KMS) key.

The file system is mounted to an Amazon EC2 instance that runs proprietary software.

The company has enabled automatic backups for the file system. The automatic backups use the AWS Backup default backup plan. A solutions architect must ensure that deleted documents can be recovered within an RPO of 100 minutes. Which solution will meet these requirements?

- A. Create a new backup plan. Update the KMS key policy to allow the AWSServiceRoleForBackup IAM role to use the key. Implement a custom cron expression to run a backup of the file system every 30 minutes.
- B. Create a new IAM role. Use the existing backup plan. Update the KMS key policy to allow the new IAM role to use the key. Enable continuous backups for point-in-time recovery.
- **C. Create a new IAM role. Create a new backup plan. Use the new IAM role to create backups. Update the KMS key policy to allow the new IAM role to use the key. Implement an hourly backup schedule for the file system.**
- D. Use the existing backup plan. Update the KMS key policy to allow the AWSServiceRoleForBackup IAM role to use the key. Enable Cross-Region Replication for the file system.

Answer: C

NEW QUESTION # 251

A company has multiple AWS accounts that are in an organization in AWS Organizations. The company needs to store AWS account activity and query the data from a central location by using SQL. Which solution will meet these requirements?

- **A. Use a delegated administrator account to create an AWS CloudTrail Lake data store. Specify CloudTrail management events for the data store. Enable the data store for all accounts in the organization. Query the data in CloudTrail Lake.**
- B. Use AWS CloudFormation StackSets to deploy AWS CloudTrail Lake data stores in each account. Specify CloudTrail management events for the data stores. Keep all other settings as default. Query the data in CloudTrail Lake.
- C. Create an AWS CloudTrail trail in each account. Specify CloudTrail management events for the trail. Configure CloudTrail to send the events to Amazon CloudWatch Logs. Configure CloudWatch cross-account observability. Query the data in CloudWatch Logs Insights.
- D. Use a delegated administrator account to create an AWS CloudTrail trail. Specify CloudTrail management events for the trail. Enable the trail for all accounts in the organization. Keep all other settings as default. Query the CloudTrail data from the CloudTrail event history page.

Answer: A

NEW QUESTION # 252

A company's interactive web application uses an Amazon CloudFront distribution to serve images from an Amazon S3 bucket. Occasionally, third-party tools ingest corrupted images into the S3 bucket. This image corruption causes a poor user experience in the application later. The company has successfully implemented and tested Python logic to detect corrupt images. A solutions architect must recommend a solution to integrate the detection logic with minimal latency between the ingestion and serving.

Which solution will meet these requirements?

- A. Use an S3 event notification that invokes an AWS Lambda function.
- B. Use an S3 event notification that invokes an AWS Step Functions state machine.
- C. Use a Lambda@Edge function that is invoked by a viewer-response event.
- **D. Use a Lambda@Edge function that is invoked by an origin-response event.**

Answer: D

Explanation:

This solution will allow the detection logic to be run as soon as the image is uploaded to the S3 bucket, before it is served to users via the CloudFront distribution. This way, the detection logic can quickly identify any corrupted images and prevent them from being served to users, minimizing latency between ingestion and serving.

Reference: AWS Lambda@Edge documentation:

<https://docs.aws.amazon.com/lambda/latest/dg/lambda-edge.html> You can use Lambda@Edge to run your code in response to CloudFront events, such as a viewer request, an origin request, a response, or an error.

NEW QUESTION # 253

A company is running multiple workloads in the AWS Cloud. The company has separate units for software development. The company uses AWS Organizations and federation with SAML to give permissions to developers to manage resources in their AWS accounts. The development units each deploy their production workloads into a common production account.

Recently, an incident occurred in the production account in which members of a development unit terminated an EC2 instance that belonged to a different development unit. A solutions architect must create a solution that prevents a similar incident from happening in the future. The solution also must allow developers the possibility to manage the instances used for their workloads.

Which strategy will meet these requirements?

- A. Create separate OUs in AWS Organizations for each development unit. Assign the created OUs to the company AWS accounts. Create separate SCPs with a deny action and a StringNotEquals condition for the DevelopmentUnit resource tag that matches the development unit name. Assign the SCP to the corresponding OU.
- **B. Pass an attribute for DevelopmentUnit as an AWS Security Token Service (AWS STS) session tag during SAML federation. Update the IAM policy for the developers' assumed IAM role with a deny action and a StringNotEquals condition for the DevelopmentUnit resource tag and aws:PrincipalTag/ DevelopmentUnit.**
- C. Create separate IAM policies for each development unit. For every IAM policy, add an allow action and a StringEquals condition for the DevelopmentUnit resource tag and the development unit name. During SAML federation, use AWS Security Token Service (AWS STS) to assign the IAM policy and match the development unit name to the assumed IAM role.
- D. Pass an attribute for DevelopmentUnit as an AWS Security Token Service (AWS STS) session tag during SAML federation. Create an SCP with an allow action and a StringEquals condition for the DevelopmentUnit resource tag and aws:PrincipalTag/DevelopmentUnit. Assign the SCP to the root OU.

Answer: B

Explanation:

Reference:

Passing session tags in SAML assertions

Using tags for attribute-based access control

NEW QUESTION # 254

A company is running a web application in the AWS Cloud. The application consists of dynamic content that is created on a set of Amazon EC2 instances. The EC2 instances run in an Auto Scaling group that is configured as a target group for an Application Load Balancer (ALB).

The company is using an Amazon CloudFront distribution to distribute the application globally. The CloudFront distribution uses the ALB as an origin. The company uses Amazon Route 53 for DNS and has created an A record of www.example.com for the CloudFront distribution.

A solutions architect must configure the application so that it is highly available and fault tolerant.

Which solution meets these requirements?

- A. Provision an Auto Scaling group and EC2 instances in a different AWS Region. Create a second target for the new Auto Scaling group in the ALB. Set up the failover routing algorithm on the ALB.
- B. Provision a full, secondary application deployment in a different AWS Region. Update the Route 53 A record to be a failover record. Add both of the CloudFront distributions as values. Create Route 53 health checks.
- **C. Provision an ALB, an Auto Scaling group, and EC2 instances in a different AWS Region. Update the CloudFront distribution, and create a second origin for the new ALB. Create an origin group for the two origins. Configure one origin as primary and one origin as secondary.**
- D. Provision a full, secondary application deployment in a different AWS Region. Create a second CloudFront distribution, and add the new application setup as an origin. Create an AWS Global Accelerator accelerator. Add both of the CloudFront distributions as endpoints.

Answer: C

Explanation:

<https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/DownloadDistS3AndCustomOrigins.html>

https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/high_availability_origin_failover.html You can set up CloudFront with origin failover for scenarios that require high availability. To get started, you create an origin group with two origins: a primary and a secondary. If the primary origin is unavailable, or returns specific HTTP response status codes that indicate a failure, CloudFront automatically switches to the secondary origin.

NEW QUESTION # 255

.....

The SAP-C02 PDF Questions of Prep4sures are authentic and real. These AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) exam questions help applicants prepare well prior to entering the actual AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) exam center. Due to our actual SAP-C02 Exam Dumps, our valued customers always pass their Amazon SAP-C02 exam on the very first try hence, saving their precious time and money too.
