## AWS-Developer PDF - Reliable AWS-Developer Dumps Sheet

For AWS-Developer test dumps, we give you free demo for you to try, so that you can have a deeper understanding of what you are going to buy. The pass rate is 98%, and we also pass guarantee and money back guarantee if you fail to pass it. AWS-Developer test dumps of us contain questions and answers, and it will help you to have an adequate practice. Besides we have free update for one year for you, therefore you can get the latest version in the following year if you buying AWS-Developer Exam Dumps of us. Buying them, and you will benefit from them in the next year.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q119-Q124):

### NEW QUESTION # 119

In regard to DynamoDB, can I modify the index once it is created?

- A. No
- B. Yes, if it is a Global secondary index

- C. Yes, if it is a local secondary index
- D. Yes, if it is a primary hash key index

**Answer: A**

Explanation:

Currently, in DynamoDB, an index cannot be modified once it is created.

#### NEW QUESTION # 120

A company is developing a web application that allows its employees to upload a profile picture to a private Amazon S3 bucket. There is no size limit for the profile pictures, which should be displayed every time an employee logs in. For security reasons, the pictures cannot be publicly accessible.

What is a viable long-term solution for this scenario?"

- A. Generate a presigned URL when a picture is uploaded. Save the URL in an Amazon DynamoDB table. Return the URL to the browser when the employee logs in.
- B. Encode a picture using base64. Save the base64 string in an Amazon DynamoDB table. Allow the browser to retrieve the string and convert it to a picture.
- C. Save the picture's S3 key in an Amazon DynamoDB table. Use a function to generate a presigned URL every time an employee logs in. Return the URL to the browser.
- **D. Save the picture's S3 key in an Amazon DynamoDB table. Create an Amazon S3 VPC endpoint to allow the employees to download pictures once they log in.**

**Answer: D**

#### NEW QUESTION # 121

A Developer has published an update to an application that is served to a global user base using Amazon CloudFront. After deploying the application, users are not able to see the updated changes.

How can the Developer resolve this issue?

- **A. Invalidate all the application objects from the edge caches.**
- B. Disable forwarding of query strings and request headers from the CloudFront distribution configuration.
- C. Disable the CloudFront distribution and enable it again to update all the edge locations.
- D. Remove the origin from the CloudFront configuration and add it again.

**Answer: A**

Explanation:

#### NEW QUESTION # 122

A company has an application that logs all information to Amazon S3. Whenever there is a new log file, an AWS Lambda function is invoked to process the log files. The code works, gathering all of the necessary information. However, when checking the Lambda function logs, duplicate entries with the same request ID are found.

What is causing the duplicate entries?

- **A. The Lambda function failed, and the Lambda service retried the invocation with a delay.**
- B. There was an S3 outage, which caused duplicate entries of the log file.
- C. The S3 bucket name was specified incorrectly.
- D. The application stopped intermittently and then resumed.

**Answer: A**

Explanation:

### NEW QUESTION # 123

A developer has code that is stored in an Amazon S3 bucket. The code must be deployed as an AWS Lambda function across multiple accounts in the same AWS Region as the S3 bucket an AWS CloudFormation template that runs for each account will deploy the Lambda function.

What is the MOST secure way to allow CloudFormation to access the Lambda Code in the S3 bucket?

- A. Use a service-based link to grant the Lambda function the S3 ListBucket and GetObject permissions by explicitly adding the S3 bucket's account number in the resource.
- **B. Grant the CloudFormation service role the S3 GetObject permission. Add a Bucket policy to Amazon S3 with the principal of ""**
- C. Grant the CloudFormation service role the S3 ListBucket and GetObject permissions. Add a bucket policy to Amazon S3 with the principal of "AWS" (account numbers)
- D. Use a service-based link to grant the Lambda function the S3 GetObject permission Add a resource of ""\*\* to allow access to the S3 bucket.

**Answer: B**

Explanation:

This solution allows the CloudFormation service role to access the S3 bucket from any account, as long as it has the S3 GetObject permission. The bucket policy grants access to any principal with the GetObject permission, which is the least privilege needed to deploy the Lambda code. This is more secure than granting ListBucket permission, which is not required for deploying Lambda code, or using a service-based link, which is not supported for Lambda functions.
