AWS-Developer Technical Training, Study AWS-Developer Dumps

If you choose our AWS-Developer exam question for related learning and training, the system will automatically record your actions and analyze your learning effects. Many people want to get a AWS-Developer certification, but they worry about their ability. So please do not hesitate and join our study. Our AWS-Developer Exam Question will help you to get rid of your worries and help you achieve your wishes. So you will have more opportunities than others and get more confidence. Our AWS-Developer quiz guide is based on the actual situation of the customer.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample

Questions (Q191-Q196):

NEW QUESTION # 191

A company wants to deploy and maintain static websites on AWS. Each website's source code is hosted in one of several version control systems, including AWS CodeCommit, Bitbucket, and GitHub.

The company wants to implement phased releases by using development, staging, user acceptance testing, and production environments in the AWS Cloud. Deployments to each environment must be started by code merges on the relevant Git branch. The company wants to use HTTPS for all data exchange. The company needs a solution that does not require servers to run continuously.

Which solution will meet these requirements with the LEAST operational overhead?

- A. Host each website in AWS Elastic Beanstalk with multiple environments. Use the EB CLI to link each repository branch. Integrate AWS CodePipeline to automate deployments from version control code merges.
- B. Host each website by using AWS Amplify with a serverless backend. Connect the repository branches that correspond to each of the desired environments. Start deployments by merging code changes to a desired branch.
- C. Host each website on its own Amazon EC2 instance. Write a custom deployment script to bundle each website's static assets. Copy the assets to Amazon EC2. Set up a workflow to run the script when code is merged.
- D. Host each website in different Amazon S3 buckets for each environment. Configure AWS CodePipeline to pull source code from version control. Add an AWS CodeBuild stage to copy source code to Amazon S3.

Answer: B

NEW QUESTION # 192

What is the data model of DynamoDB?

- A. "Database", which is a set of "Tables", which is a set of "Items", which is a set of "Attributes".
- B. "Items", with Keys and one or more Attribute; and "Attribute", with Name and Value.
- C. "Database", a collection of Tables; "Tables", with Keys and one or more Attribute; and "Attribute", with Name and Value.
- D. "Table", a collection of Items; "Items", with Keys and one or more Attribute; and "Attribute", with Name and Value.

Answer: D

Explanation:

The data model of DynamoDB is:

"Table", a collection of Items;

"Items", with Keys and one or more Attribute;

"Attribute", with Name and Value.

<http://docs.aws.amazon.com/amazondynamodb/latest/developerguide/DataModel.html>

NEW QUESTION # 193

Pass4Test (with AWS account ID 111122223333) has created 50 IAM users for its organization's employees. Pass4Test wants to make the AWS console login URL for all IAM users like:

<https://pass4test.signin.aws.amazon.com/console/>. How can this be configured?

- A. Create an IAM AWS account alias with the name pass4test
- B. It is not possible to have a personalized IAM login URL
- C. The user needs to use Route 53 to map the pass4test domain and IAM URL
- D. Create an IAM hosted zone Identity for the domain pass4test

Answer: A

Explanation:

If a user wants the URL of the AWS IAM sign-in page to have a company name instead of the AWS account ID, he can create an alias for his AWS account ID.

<http://docs.aws.amazon.com/IAM/latest/UserGuide/AccountAlias.html>

NEW QUESTION # 194

A Developer is receiving HTTP 400: ThrottlingException errors intermittently when calling the Amazon CloudWatch API. When a call fails, no data is retrieved.

What best practice should first be applied to address this issue?

- **A. Contact AWS Support for a limit increase.**
- B. Retry the call with exponential backoff
- C. Analyze the applications and remove the API call
- D. Use the AWS CLI to get the metrics

Answer: A

Explanation:

Explanation

CloudWatch allows you to GetMetricData at 50 transactions per second (TPS). The maximum number of operation requests you can make per second without being throttled. If you need more you need to increase the limit.

Refer AWS documentation - CloudWatch Limits

GetMetricData

50 transactions per second (TPS). The maximum number of operation requests you can make per second without being throttled. 180,000 Datapoints Per Second (DPS) if the used in the API request is less than or equal to three hours from current time. 90,000 DPS if the is more than three hours from current time. This is the maximum number of datapoints you can request per second using one or more API calls without being throttled.

You can request a limit increase for both of these limits.

NEW QUESTION # 195

A company wants to automate the creation of secure test databases with random credentials to be stored safely for later use. The credentials should have sufficient information about each test database to initiate a connection and perform automated credential rotations. The credentials should not be logged or stored anywhere in an unencrypted form.

Which steps should a Database Specialist take to meet these requirements using an AWS CloudFormation template?

- A. Create the database with the MasterUserName and MasterUserPassword properties set to the default values. Then, create the secret with the user name and password set to the same default values. Add a Secret Target Attachment resource with the SecretId and TargetId properties set to the Amazon Resource Names (ARNs) of the secret and the database. Finally, update the secret's password value with a randomly generated string set by the GenerateSecretString property.
- **B. Add a resource of type AWS::SecretsManager::Secret and specify the GenerateSecretString property.**
Then, define the database user name in the SecureStringTemplate template. Create a resource for the database and reference the secret string for the MasterUserName and MasterUserPassword properties.
Then, add a resource of type AWS::SecretsManagerSecretTargetAttachment with the SecretId and TargetId properties set to the Amazon Resource Names (ARNs) of the secret and the database.
- C. Add a Mapping property from the database Amazon Resource Name (ARN) to the secret ARN. Then, create the secret with a chosen user name and a randomly generated password set by the GenerateSecretString property. Add the database with the MasterUserName and MasterUserPassword properties set to the user name of the secret.
- D. Create the secret with a chosen user name and a randomly generated password set by the GenerateSecretString property. Add an SecretTargetAttachment resource with the SecretId property set to the Amazon Resource Name (ARN) of the secret and the TargetId property set to a parameter value matching the desired database ARN. Then, create a database with the MasterUserName and MasterUserPassword properties set to the previously created values in the secret.

Answer: B

Explanation:

Explanation/Reference: <https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/aws-resource-secretsmanager-secrettargetattachment.html>

NEW QUESTION # 196

.....

Having more competitive advantage means that you will have more opportunities and have a job that will satisfy you.
