New Amazon AWS-DevOps-Engineer-Professional Braindumps Free & Valid AWS-DevOps-Engineer-Professional Exam Sample

When you are visiting our website, you will find that we have three different versions of the AWS-DevOps-Engineer-Professional study guide for you to choose. And every version can apply in different conditions so that you can use your piecemeal time to learn, and every minute will have a good effect. In order for you to really absorb the content of AWS-DevOps-Engineer-Professional Exam Questions, we will tailor a learning plan for you. This study plan may also have a great impact on your work and life. With our AWS-DevOps-Engineer-Professional preparation materials, you can have a brighter future.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q351-Q356):

NEW QUESTION # 351

A company has multiple development groups working in a single shared AWS account. The Senior Manager of the groups wants to be alerted via a third-party API call when the creation of resources approaches the service limits for the account. Which solution will accomplish this with the LEAST amount of development effort?

- A. Create an Amazon CloudWatch Event rule that runs periodically and targets an AWS Lambda function. Within the Lambda function, evaluate the current state of the AWS environment and compare deployed resource values to

resource limits on the account. Notify the Senior Manager if the account is approaching a service limit.

- B. Deploy an AWS Lambda function that refreshes AWS Personal Health Dashboard checks, and configure an Amazon CloudWatch Events rule to run the Lambda function periodically. Create another CloudWatch Events rule with an event pattern matching Personal Health Dashboard events and a target Lambda function. In the target Lambda function, notify the Senior Manager.
- C. Deploy an AWS Lambda function that refreshes AWS Trusted Advisor checks, and configure an Amazon CloudWatch Events rule to run the Lambda function periodically. Create another CloudWatch Events rule with an event pattern matching Trusted Advisor events and a target Lambda function. In the target Lambda function, notify the Senior Manager.
- D. Add an AWS Config custom rule that runs periodically, checks the AWS service limit status, and streams notifications to an Amazon SNS topic. Deploy an AWS Lambda function that notifies the Senior Manager, and subscribe the Lambda function to the SNS topic.

Answer: C

NEW QUESTION # 352

A legacy web application stores access logs in a proprietary text format. One of the security requirements is to search application access events and correlate them with access data from many different systems.

These searches should be near-real time.

Which solution offloads the processing load on the application server and provides a mechanism to search the data in near-real time?

- A. Upload the log files to Amazon S3 by using the S3 sync command. Use Amazon Athena to define the structure of the data as a table, with Athena SQL queries to search for access events.
- B. Install the Amazon CloudWatch Logs agent on the application server and use CloudWatch Events rules to search logs for access events. Use Amazon CloudSearch as an interface to search for events.
- C. Install the Amazon Kinesis Agent on the application server, configure it to monitor the log files, and send it to a Kinesis stream. Configure Kinesis to transform the data by using an AWS Lambda function, and forward events to Amazon ES for analysis. Use the Elasticsearch API for querying the data.
- D. Use the third-party file-input plugin Logstash to monitor the application log file, then use a custom dissect filter on the agent to parse the log entries into the JSON format. Output the events to Amazon ES to be searched. Use the Elasticsearch API for querying the data.

Answer: C

NEW QUESTION # 353

Which of these is not a Pseudo Parameter in AWS CloudFormation?

- A. AWS::StackName
- B. AWS::StackArn
- C. AWS::AccountId
- D. AWS::NotificationARNs

Answer: B

Explanation:

This is the complete list of Pseudo Parameters: AWS::AccountId, AWS::NotificationARNs, AWS::NoValue, AWS::Region, AWS::StackId, AWS::StackName

<http://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/pseudo-parameter-reference.html>

NEW QUESTION # 354

Your application is having a very high traffic, so you have enabled autoscaling in multi availability zone to suffice the needs of your application but you observe that one of the availability zone is not receiving any traffic. What can be wrong here?

- A. Autoscaling can be enabled for multi AZ only in north Virginia region
- B. Availability zone is not added to Elastic load balancer
- C. Autoscaling only works for single availability zone
- D. Instances need to be manually added to availability zone

Answer: B

Explanation:

Explanation

When you add an Availability Zone to your load balancer, Elastic Load Balancing creates a load balancer node in the Availability Zone. Load balancer nodes accept traffic from clients and forward requests to the healthy registered instances in one or more Availability Zones.

For more information on adding AZ's to CLB, please refer to the below URL:

* <http://docs.aws.amazon.com/elasticloadbalancing/latest/classic/enable-disable-az.html>

NEW QUESTION # 355

Which of the following services along with CloudFormation helps in building a Continuous Delivery release practice

- A. AWSLambda
- B. AWSCloudTrail
- C. **AWSCodePipeline**
- D. AWSConfig

Answer: C

Explanation:

Explanation

The AWS Documentation mentions

Continuous delivery is a release practice in which code changes are automatically built, tested, and prepared for release to production. With AWS CloudFormation and AWS CodePipeline, you can use continuous delivery to automatically build and test changes to your AWS CloudFormation templates before promoting them to production stacks. This release process lets you rapidly and reliably make changes to your AWS infrastructure.

For more information on Continuous Delivery, please visit the below URL:

<http://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/continuous-delivery-codepipeline.html>

NEW QUESTION # 356

.....

What AWS-DevOps-Engineer-Professional study quiz can give you is far more than just a piece of information. First of all, AWS-DevOps-Engineer-Professional preparation questions can save you time and money. As a saying goes, to sensible men, every day is a day of reckoning. Every minute AWS-DevOps-Engineer-Professional study quiz saves for you may make you a huge profit. Secondly, AWS-DevOps-Engineer-Professional learning guide will also help you to master a lot of very useful professional knowledge in the process of helping you pass the exam.
