Which of the following is a solution to reduce this potential availability impact?

- A. Spread your memory and compute capacity over fewer number of cache nodes, each with smaller capacity.
- B. Include fewer number of high capacity nodes.
- C. Spread your memory and compute capacity over a larger number of cache nodes, each with smaller capacity.
- D. Include a larger number of cache nodes, each with high capacity.

Answer: C

Explanation:

In Amazon ElastiCache, the number of cache nodes in the cluster is a key factor in the availability of your cluster running Memcached. The failure of a single cache node can have an impact on the availability of your application and the load on your back-end database while ElastiCache provisions a replacement for the failed cache node and it get repopulated.

You can reduce this potential availability impact by spreading your memory and compute capacity over a larger number of cache nodes, each with smaller capacity, rather than using a fewer number of high capacity nodes.

NEW QUESTION # 1065

George has launched three EC2 instances inside the US-East-1a zone with his AWS account. Ray has launched two EC2 instances in the US-East-1a zone with his AWS account. Which of the below mentioned statements will help George and Ray understand the availability zone (AZ) concept better?

- A. The instances of George and Ray will be running in the same data centre
- B. All the instances of George and Ray can communicate over a private IP with a minimal cost
- C. All the instances of George and Ray can communicate over a private IP without any cost
- D. The US-East-1a region of George and Ray can be different availability zones

Answer: D

Explanation:

Each AWS region has multiple, isolated locations known as Availability Zones. To ensure that the AWS resources are distributed across the Availability Zones for a region, AWS independently maps the Availability Zones to identifiers for each account. In this case the Availability Zone US-East-1a where George's EC2 instances are running might not be the same location as the US-East-1a zone of Ray's EC2 instances. There is no way for the user to coordinate the Availability Zones between accounts.
