People need to increase their level by getting the Amazon AWS-Solutions-Architect-Associate certification. If you take an example of the present scenario in this competitive world, you will find people struggling to meet their ends just because they are surviving on low-scale salaries. Even if they are thinking about changing their jobs, people who are ready with a better skill set or have prepared themselves with Amazon AWS-Solutions-Architect-Associate Certification grab the chance. This leaves them in the same place where they were.

If you want to make progress and mark your name in your circumstances, you should never boggle at difficulties. As far as we know, many customers are depressed by the exam ahead of them, afraid of they may fail it unexpectedly. Our AWS-Solutions-Architect-Associate exam tool has three versions for you to choose, PDF, App, and software. If you have any question or hesitate, you can download our free Demo. The Demo will show you part of the content of our AWS-Solutions-Architect-Associate Study Materials real exam materials. So you do not have to worry about the quality of our exam questions. Our AWS-Solutions-Architect-Associate exam tool have been trusted and purchased by thousands of candidates. What are you waiting for?

High Quality AWS-Solutions-Architect-Associate Prep Guide Dump is Most Valid AWS-Solutions-Architect-Associate Certification Materials

The PDF version of our AWS-Solutions-Architect-Associate study tool is very practical, which is mainly reflected on the special function. As I mentioned above, our company are willing to provide all people with the demo for free. You must want to know how to get the trial demo of our AWS-Solutions-Architect-Associate question torrent; the answer is the PDF version. You can download the free demo form the PDF version of our AWS-Solutions-Architect-Associate Exam Torrent. If you download our study materials successfully, you can print our study materials on pages by the PDF version of our AWS-Solutions-Architect-Associate exam torrent.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q1081-Q1086):

NEW QUESTION # 1081

A company runs workloads on AWS. The company needs to connect to a service from an external provider.

The service is hosted in the provider's VPC. According to the company's security team, the connectivity must be private and must be restricted to the target service. The connection must be initiated only from the company's VPC.

Which solution will mast these requirements?

- A. Create a VPC peering connection between the company's VPC and the provider's VPC. Update the route table to connect to the target service.
- B. Create a NAT gateway in a public subnet of the company's VPC. Update the route table to connect to the target service.

- C. Ask the provider to create a virtual private gateway in its VPC. Use AWS PrivateLink to connect to the target service.
- D. Ask the provider to create a VPC endpoint for the target service. Use AWS PrivateLink to connect to the target service.

Answer: D

NEW QUESTION # 1082

A company wants to provide users with access to AWS resources. The company has 1,500 users and manages their access to on-premises resources through Active Directory user groups on the corporate network. However, the company does not want users to have to maintain another identity to access the resources. A solutions architect must manage user access to the AWS resources while preserving access to the on-premises resources. What should the solutions architect do to meet these requirements?

- A. Create an IAM user for each user in the company. Attach the appropriate policies to each user.
- B. Use Amazon Cognito with an Active Directory user pool. Create roles with the appropriate policies attached.
- C. Configure Security Assertion Markup Language (SAML) 2.0-based federation. Create roles with the appropriate policies attached. Map the roles to the Active Directory groups.
- D. Define cross-account roles with the appropriate policies attached. Map the roles to the Active Directory groups.

Answer: C

NEW QUESTION # 1083

A company is deploying a web portal. The company wants to ensure that only the web portion of the application is publicly accessible. To accomplish this, the VPC was designed with two public subnets and two private subnets. The application will run on several Amazon EC2 instances in an Auto Scaling group. SSL termination must be offloaded from the EC2 instances. What should a solutions architect do to ensure these requirements are met?

- A. Configure the Application Load Balancer in the private subnets. Configure the Auto Scaling group in the private subnets and associate it with the Application Load Balancer.
- B. Configure the Network Load Balancer in the public subnets. Configure the Auto Scaling group in the private subnets and associate it with the Application Load Balancer.
- C. Configure the Application Load Balancer in the public subnets. Configure the Auto Scaling group in the private subnets and associate it with the Application Load Balancer.
- D. Configure the Network Load Balancer in the public subnets. Configure the Auto Scaling group in the public subnets and associate it with the Application Load Balancer.

Answer: C

NEW QUESTION # 1084

A company uses Amazon S3 to host a web application. Currently, the company uses a continuous integration tool running on an Amazon EC2 instance that builds and deploys the application by uploading it to an S3 bucket. A Solutions Architect needs to enhance the security of the company's platform with the following requirements:

- * A build process should be run in a separate account from the account hosting the web application.
- * A build process should have minimal access in the account it operates in.
- * Long-lived credentials should not be used.

As a start, the Development team created two AWS accounts: one for the application named web account process; other is a named build account.

Which solution should the Solutions Architect use to meet the security requirements?

- A. In the build account, modify the continuous integration process to perform a lookup of the IAM user credentials from AWS Secrets Manager. In the web account, create a new IAM user. Store the access key and secret access key in Secrets Manager. Attach the PowerUserAccess IAM policy to the IAM user.
- B. In the build account, create a new IAM role, which can be assumed by Amazon EC2 only. Attach the role to the EC2 instance running the continuous integration process. Create an IAM policy to allow s3:PutObject calls on the S3 bucket in the web account. In the web account, create an S3 bucket policy attached to the S3 bucket that allows the build account to use s3:PutObject calls.
- C. In the build account, create a new IAM user. Store the access key and secret access key in AWS Secrets Manager. Modify the continuous integration process to perform a lookup of the IAM user credentials from Secrets Manager. Create an IAM policy to allow s3:PutObject calls on the S3 bucket in the web account, and attach it to the user. In the web account,

create an S3 bucket policy attached to the S3 bucket that allows the newly created IAM user to use s3:PutObject calls.

- D. In the build account, create a new IAM role, which can be assumed by Amazon EC2 only. Attach the role to the EC2 instance running the continuous integration process. Create an IAM policy to allow s3: PutObject calls on the S3 bucket in the web account. In the web account, create an S3 bucket policy attached to the S3 bucket that allows the newly created IAM role to use s3:PutObject calls.

Answer: B

NEW QUESTION # 1085

A company needs to connect its on-premises data center network to a new VPC. The data center network has a 100 Mbps symmetrical internet connection. An application that is running on premises will transfer multiple gigabytes of data each day. The application will use an Amazon Kinesis Data Firehose delivery stream for processing. What should a solutions architect recommend for maximum performance?

- A. Create an AWS Site-to-Site VPN connection between the on-premises network and the VPC. Configure BGP routing between the customer gateway and the virtual private gateway. Use the VPN connection to send the data from on premises to Kinesis Data Firehose.
- B. Procure an AWS Snowball Edge Storage Optimized device. After several days' worth of data has accumulated, copy the data to the device and ship the device to AWS for expedited transfer to Kinesis Data Firehose. Repeat as needed.
- C. Use AWS PrivateLink to create an interface VPC endpoint for Kinesis Data Firehose in the VPC. Set up a 1 Gbps AWS Direct Connect connection between the on-premises network and AWS. Use the PrivateLink endpoint to send the data from on premises to Kinesis Data Firehose.
- D. Create a VPC peering connection between the on-premises network and the VPC. Configure routing for the on-premises network to use the VPC peering connection.

Answer: C

NEW QUESTION # 1086

.....

We have chosen a large number of professionals to make AWS-Solutions-Architect-Associate learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from AWS-Solutions-Architect-Associate Exam Training professionals at any time. We can be sure that with the professional help of our AWS-Solutions-Architect-Associate test guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose AWS-Solutions-Architect-Associate test guide to get you closer to success!
