Features of Three Formats Amazon AWS-Solutions-Associate Exam Questions

It is known to us that the knowledge workers have been playing an increasingly important role all over the world, since we have to admit the fact that the AWS-Solutions-Associate certification means a great deal to a lot of the people, especially these who want to change the present situation and get a better opportunity for development. If you also want to work your way up the ladder, preparing for the AWS-Solutions-Associate Exam will be the best and most suitable choice for you. If you are still hesitating whether you need to take the AWS-Solutions-Associate exam or not, you will lag behind other people.

Amazon AWS-Solutions-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) Certification Exam is a globally recognized certification in the field of cloud computing. AWS-Solutions-Associate exam validates the skills and knowledge necessary to design and deploy scalable, highly available, and fault-tolerant systems on the Amazon Web Services (AWS) platform. AWS Certified Solutions Architect - Associate (SAA-C02) certification exam is designed for professionals who have a minimum of one year of experience with AWS and are proficient in designing and deploying scalable, fault-tolerant, and highly available systems.

Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample Questions (Q118-Q123):

NEW QUESTION # 118

An organization is making software for the CIA in USA. CIA agreed to host the application on AWS but in a secure environment. The organization is thinking of hosting the application on the AWS GovCloud region. Which of the below mentioned difference is not correct when the organization is hosting on the AWS GovCloud in comparison with the AWS standard region?

- A. Physical and logical administrative access only to U.S. persons.
- B. GovCloud region authentication is isolated from Amazon.com.
- C. It is physically isolated and has logical network isolation from all the other regions.
- **D. The billing for the AWS GovCloud will be in a different account than the Standard AWS account.**

Answer: D

Explanation:

Explanation/Reference:

Explanation:

AWS GovCloud (US) is an isolated AWS region designed to allow U.S. government agencies and customers to move sensitive workloads into the cloud by addressing their specific regulatory and compliance requirements. The AWS GovCloud (US) Region adheres to the U.S. International Traffic in Arms Regulations (ITAR) requirements. It has added advantages, such as: Restricting physical and logical administrative access to U.S. persons only There will be a separate AWS GovCloud (US) credentials, such as access key and secret access key than the standard AWS account The user signs in with the IAM user name and password The AWS GovCloud (US) Region authentication is completely isolated from Amazon.com If the organization is planning to host on EC2 in AWS GovCloud then it will be billed to standard AWS account of organization since AWS GovCloud billing is linked with the standard AWS account and is not be billed separately.

NEW QUESTION # 119

A customer set up an Amazon VPC with one private subnet and one public subnet with a NAT gateway. The VPC will contain a group of Amazon EC2 instances. All instances will configure themselves at startup by downloading a bootstrap script from an Amazon S3 bucket with a policy that only allows access from the customer's Amazon EC2 instances and then deploys an application through GIT. A Solutions Architect has been asked to design a solution that provides the highest level of security regarding network connectivity to the Amazon EC2 instances. How should the Architect design the infrastructure?

- A. Place the Amazon EC2 instances in a private subnet, and assign EIPs; route outgoing traffic through the internet gateway.
- B. Place the Amazon EC2 instances in the public subnet, with no EIPs; route outgoing traffic through the internet gateway.
- **C. Place the Amazon EC2 instances in a public subnet, and assign EIPs; route outgoing traffic through the NAT gateway.**
- D. Place the Amazon EC2 instances in a private subnet, with no EIPs; route outgoing traffic through the NAT gateway

Answer: C

NEW QUESTION # 120

A company is working with an external vendor that requires write access to the company's Amazon Simple Queue Service (Amazon SQS) queue. The vendor has its own AWS account.

What should a solutions architect do to implement least privilege access?

- A. Create an IAM user with write access to the SQS queue and share the credentials for the IAM user.
- B. Update AWS Resource Access Manager to provide write access to the SQS queue from the vendor's AWS account.
- C. Update the permission policy on the SQS queue to give write access to the vendor's AWS account.
- **D. Create a cross-account role with access to all SQS queues and use the vendor's AWS account in the trust document for the role.**

Answer: D

NEW QUESTION # 121

An administrator is using Amazon CloudFormation to deploy a three tier web application that consists of a web tier and application tier that will utilize Amazon DynamoDB for storage when creating the CloudFormation template.

Which of the following would allow the application instance access to the DynamoDB tables without exposing API credentials?

- A. Create an Identity and Access Management Role that has the required permissions to read and write from the required DynamoDB table and associate the Role to the application instances by referencing an instance profile.
- B. Use the Parameter section in the Cloud Formation template to have the user input Access and Secret Keys from an already created IAM user that has the permissions required to read and write from the required DynamoDB table.
- **C. Create an Identity and Access Management Role that has the required permissions to read and write from the required DynamoDB table and reference the Role in the instance profile property of the application instance.**
- D. Create an identity and Access Management user in the CloudFormation template that has permissions to read and write from the required DynamoDB table, use the GetAtt function to retrieve the Access and secret keys and pass them to the application instance through user-data.

Answer: C

NEW QUESTION # 122

A company has a live chat application running on list on-premises servers that use WebSockets. The company wants to migrate the application to AWS Application traffic is inconsistent, and the company expects there to be more traffic with sharp spikes in the future.

The company wants a highly scalable solution with no server maintenance nor advanced capacity planning Which solution meets these requirements?

- **A. Run Amazon EC2 instances behind a Network Load Balancer in an Auto Scaling group with an Amazon DynamoDB table as the data store Configure the DynamoDB table for provisioned capacity**
- B. Use Amazon API Gateway and AWS Lambda with an Amazon DynamoDB table as the data store Configure the DynaiWDB table for on-demand capacity
- C. Run Amazon EC2 instances behind an Application Load Balancer in an Auto Scaling group with an Amazon DynamoDB table as the data store Configure the DynamoDB table for on-demand capacity
- D. Use Amazon API Gateway and AWS Lambda with an Amazon DynamoDB table as the data store Configure the DynamoDB table for provisioned capacity

Answer: A
