Nowadays the test AWS-Solutions-Associate certificate is more and more important because if you pass it you will improve your abilities and your stocks of knowledge in some certain area and find a good job with high pay. If you buy our AWS-Solutions-Associate exam materials you can pass the exam easily and successfully. Our AWS-Solutions-Associate Exam Materials boost high passing rate and if you are unfortunate to fail in exam we can refund you in full at one time immediately. The learning costs you little time and energy and you can commit yourself mainly to your jobs or other important things.

The AWS Solutions Architect certification is one of the most sought-after certifications in the IT industry today. AWS Certified Solutions Architect - Associate (SAA-C02) certification is designed to help professionals enhance their skills and knowledge in AWS architecture, design principles, and best practices. AWS-Solutions-Associate Exam covers a wide range of topics, including AWS services, storage solutions, security, networking, and application deployment.

## High Pass-Rate AWS-Solutions-Associate Exam Fee - Win Your Amazon Certificate with Top Score

It can be said that all the content of the AWS-Solutions-Associate prepare questions are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the AWS-Solutions-Associate Practice Guide provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our AWS-Solutions-Associate exam braindumps, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.

Amazon AWS-Solutions-Architect-Associate Certification Exam, also known as the AWS Certified Solutions Architect - Associate (SAA-C02), is a popular certification program offered by Amazon Web Services (AWS). AWS Certified Solutions Architect - Associate (SAA-C02) certification is designed for individuals who want to validate their skills and knowledge in designing, deploying, and operating scalable, highly available, and fault-tolerant systems on AWS.

The AWS-Solutions-Architect-Associate certification is ideal for IT professionals, system administrators, and developers who want to demonstrate their expertise in AWS services and solutions. AWS Certified Solutions Architect - Associate (SAA-C02) certification is also suitable for individuals who want to enhance their career prospects by acquiring new skills and knowledge in cloud computing. With the growing demand for cloud computing professionals, the AWS-Solutions-Architect-Associate certification can help candidates stand out in the job market and increase their earning potential.

## Amazon AWS Certified Solutions Architect - Associate (SAA-C02) Sample

## Questions (Q640-Q645):

### NEW QUESTION # 640

A solutions architect is designing an application that helps users fill out and submit registration forms. The solutions architect plans to use a two-tier architecture that includes a web application server tier and a worker tier.

The application needs to process submitted forms quickly. The application needs to process each form exactly once. The solution must ensure that no data is lost.

Which solution will meet these requirements?

- A. Use an Amazon API Gateway HTTP API between the web application server tier and the worker tier to store and forward form data.
- B. Use an AWS Step Functions workflow. Create a synchronous workflow between the web application server tier and the worker tier that stores and forwards form data.
- C. Use an Amazon Simple Queue Service (Amazon SQS) FIFO queue between the web application server tier and the worker tier to store and forward form data.
- D. Use an Amazon Simple Queue Service (Amazon SQS) standard queue between the web application server tier and the worker tier to store and forward form data.

**Answer: C**

Explanation:

To process each form exactly once and ensure no data is lost, using an Amazon SQS FIFO (First-In-First-Out) queue is the most appropriate solution. SQS FIFO queues guarantee that messages are processed in the exact order they are sent and ensure that each message is processed exactly once. This ensures data consistency and reliability, both of which are crucial for processing user-submitted forms without data loss.

SQS acts as a buffer between the web application server and the worker tier, ensuring that submitted forms are stored reliably and forwarded to the worker tier for processing. This also decouples the application, improving its scalability and resilience.

Option B (API Gateway): API Gateway is better suited for API management rather than acting as a message queue for form processing.

Option C (SQS Standard Queue): While SQS Standard queues offer high throughput, they do not guarantee exactly-once processing or the strict ordering needed for this use case.

Option D (Step Functions): Step Functions are useful for orchestrating workflows but add unnecessary complexity for simple message queuing and form processing.

Amazon SQS FIFO Queues

Decoupling Application Tiers Using Amazon SQS

### NEW QUESTION # 641

An application that runs on an Amazon EC2 instance must make secure calls to Amazon S3 buckets.

Which steps can a Solutions Architect take to ensure that the calls are made without exposing credentials?

- A. Create an IAM role granting least privilege and assign it to the Amazon EC2 instance profile.
- B. Generate temporary access keys to grant users temporary access to the Amazon EC2 instance.
- C. Create an IAM policy granting access to all services and assign it to the Amazon EC2 instance profile.
- D. Generate an access key ID and a secret key, and assign an IAM role with least privilege.

**Answer: A**

### NEW QUESTION # 642

A large real-estate brokerage is exploring the option of adding a cost-effective location based alert to their existing mobile application. The application backend infrastructure currently runs on AWS. Users who opt in to this service will receive alerts on their mobile device regarding real-estate offers in proximity to their location.

For the alerts to be relevant delivery time needs to be in the low minute count the existing mobile app has 5 million users across the US.

Which one of the following architectural suggestions would you make to the customer?

- A. The mobile application will send device location using SQS. EC2 instances will retrieve the relevant offers from DynamoDB. AWS Mobile Push will be used to send offers to the mobile application.

- B. The mobile application will submit its location to a web service endpoint utilizing Elastic Load Balancing and EC2 instances; DynamoDB will be used to store and retrieve relevant offers EC2 instances will communicate with mobile earners/device providers to push alerts back to mobile application.
- C. Use AWS DirectConnect or VPN to establish connectivity with mobile carriers EC2 instances will receive the mobile applications location through carrier connection; RDS will be used to store and relevant offers. EC2 instances will communicate with mobile carriers to push alerts back to the mobile application.
- D. The mobile application will send device location using AWS Mobile Push EC2 instances will retrieve the relevant offers from DynamoDB. EC2 instances will communicate with mobile carriers/device providers to push alerts back to the mobile application.

**Answer: A**

#### NEW QUESTION # 643

A company has an image processing workload running on Amazon Elastic Container Service (Amazon ECS) in two private subnets. Each private subnet uses a NAT instance for internet access. All images are stored in Amazon S3 buckets The company is concerned about the data transfer costs between Amazon ECS and Amazon S3. What should a solutions architect do to reduce costs?

- **A. Configure an interface endpoint for traffic destined to Amazon S3**
- B. Configure Amazon CloudFront for the S3 bucket storing the images
- C. Configure a gateway endpoint for traffic destined to Amazon S3.
- D. Configure a NAT gateway to replace the NAT instances.

**Answer: A**

#### NEW QUESTION # 644

A customer has written an application that uses Amazon S3 exclusively as a data store. The application works well until the customer increases the rate at which the application is updating information. The customer now reports that outdated data occasionally appears when the application accesses objects in Amazon S3. What could be the problem, given that the application logic is otherwise correct?

- **A. The application is reading parts of objects from Amazon S3 using a range header.**
- B. The application is reading objects from Amazon S3 using parallel object requests.
- C. The application is updating records by writing new objects with unique keys.
- D. The application is updating records by overwriting existing objects with the same keys.

**Answer: A**
