Axis Network Video Exam test questions and dumps, ANVE exam cram

Axis ANVE questions are available in PDF format. Our Axis ANVE PDF is embedded with questions relevant to the actual exam content only. Axis ANVE PDF is printable and portable, so you can learn with ease and share it on multiple devices. You can use this Axis ANVE PDF on your mobile and tablet anywhere, anytime, without the internet and installation process.

Axis ANVE Certification Exam is a vendor-neutral certification program that covers a broad range of topics related to network video technologies. It is designed to provide professionals with the knowledge and skills necessary to design, install, configure, and manage Axis network video systems. ANVE Exam is recognized globally and is an essential requirement for professionals seeking to advance their careers in the field of network video surveillance.

Axis Network Video Exam Sample Questions (Q116-Q121):

NEW QUESTION # 116

If a surveillance camera is installed in an environment with fluorescent lighting, which effect may this have on the video quality?

- **A. Flickering effects on video**
- B. Motion blur on moving objects
- C. Increased color saturation

- D. Increased random noise

Answer: A

Explanation:

Fluorescent lighting can cause flickering effects in video due to the way these lights operate. Fluorescent lamps typically flicker at twice the power line frequency (50 Hz or 60 Hz), which can interfere with the camera's frame rate and shutter speed, leading to visible flickering in the recorded video. This effect is more pronounced when the camera's exposure settings are not synchronized with the frequency of the lighting. Axis Network Video documentation discusses the importance of using cameras with anti-flicker settings or adjusting the shutter speed to match the lighting frequency to mitigate this issue.

NEW QUESTION # 117

Pixel density increases when

- A. the distance to the object grows.
- B. the aperture increases.
- C. the focal length decreases.
- D. the field of view decreases.

Answer: D

Explanation:

Pixel density increases when the field of view decreases. By narrowing the field of view, the same number of pixels are concentrated over a smaller area, resulting in higher pixel density. This means that more detail can be captured in a given area, which is essential for applications requiring high image resolution and clarity. This concept is confirmed by Axis Communications' documentation on image quality and pixel density.

NEW QUESTION # 118

Which of the following are multi-sensor cameras? (Select two)

- A. AXIS P1275
- B. a AXIS P3807-PVE
- C. AXIS Q3819-PVE
- D. AXIS P1265
- E. AXIS M3077-PVE

Answer: B,C

Explanation:

The AXIS P3807-PVE and AXIS Q3819-PVE are multi-sensor cameras. Multi-sensor cameras have multiple image sensors within a single camera housing, providing wide-area coverage and high-resolution images.

These cameras can capture different angles simultaneously, making them ideal for large areas where comprehensive coverage is needed. References: Axis Communications product specifications for multi-sensor cameras.

NEW QUESTION # 119

When dealing with a complicated lighting scenario, such as a camera inside looking out through bright windows, which camera would best adapt to the scene to provide the highest image detail?

- A. AXIS Q1604
- B. AXIS M3204
- C. AXIS P3304
- D. AXIS P5534

Answer: A

Explanation:

Disconnecting the power and network cables before replacing a camera lens is crucial because there is a risk of short-circuiting the camera electronics. If the camera is powered on while the lens is being replaced, accidental contact with electronic components can

cause a short circuit, potentially damaging the camera.

NEW QUESTION # 120

PoE class 3 corresponds to what power level at the PSE?

- A. 7.0 W
- B. 4.0 W
- C. 30 W
- D. 15.4 W

Answer: D

Explanation:

PoE (Power over Ethernet) Class 3 corresponds to a power level of 15.4 W at the Power Sourcing Equipment (PSE). This classification allows the delivery of up to 15.4 W of power over standard Ethernet cables to devices such as IP cameras and VoIP phones. This information is based on the IEEE 802.3af standard, which defines the power levels for different PoE classes. Axis Communications' documentation on PoE standards confirms this power level for Class 3.
