## Microsoft Azure Administrator Sample Questions (Q17-Q22):

**NEW QUESTION # 17**

You have an Azure virtual machine named VM1.

The network interface for VM1 is configured as shown in the exhibit. (Click the Exhibit tab.)

You deploy a web server on VM1, and then create a secure website that is accessible by using the HTTPS protocol. VM1 is used as a web server only.

You need to ensure that users can connect to the website from the internet.

What should you do?

- A. Create a new inbound rule that allows TCP protocol 443 and configure the protocol to have a priority of 501.
- B. Modify the protocol of Rule4.
- C. Delete Rule1.
- D. For Rule5, change the Action to Allow and change the priority to 401.

**Answer: D**

Explanation:

Rule 2 is blocking HTTPS access (port 443) and has a priority of 500.

Changing Rule 5 (ports 50-5000) and giving it a lower priority number will allow access on port 443.

Note: Rules are processed in priority order, with lower numbers processed before higher numbers, because lower numbers have higher priority. Once traffic matches a rule, processing stops.

Incorrect Answers:

A: Rule 2 is blocking HTTPS access (port 443) and has a priority of 500. Creating a rule for the same protocol (443) with a higher priority number will not help.

C: Rule 1 blocks access to port 80, which is used for HTTP, not HTTPS.

D: Rule 2 is blocking HTTPS access (port 443). Changing Rule 4 allows access on UDP but is a higher priority number than Rule. Changing the protocol on Rule 4 to TCP will not help if we don't also change the priority to a lower number.

**NEW QUESTION # 18**

Your company has three offices. The offices are located in Miami, Los Angeles, and New York.

Each office contains datacenter.

You have an Azure subscription that contains resources in the East US and West US Azure regions. Each region contains a virtual

network. The virtual networks are peered.
You need to connect the datacenters to the subscription. The solution must minimize network latency between the datacenters.
What should you create?

- A. three virtual hubs and one virtual WAN
- B. three virtual WANs and one virtual hub
- C. three On-premises data gateways and one Azure Application Gateway
- D. three Azure Application Gateways and one On-premises data gateway

**Answer: A**

Explanation:
Virtual WAN: The virtualWAN resource represents a virtual overlay of your Azure network and is a collection of multiple resources.
It contains links to all your virtual hubs that you would like to have within the virtual WAN. Virtual WAN resources are isolated from
each other and can't contain a common hub. Virtual hubs across Virtual WAN don't communicate with each other.
Hub: A virtual hub is a Microsoft-managed virtual network. The hub contains various service endpoints to enable connectivity. From
your on-premises network (vpnsite), you can connect to a VPN gateway inside the virtual hub, connect ExpressRoute circuits to a
virtual hub, or even connect mobile users to a point-to-site gateway in the virtual hub. The hub is the core of your network in a
region. Multiple virtual hubs can be created in the same region.

**NEW QUESTION # 19**
You have an Azure subscription named Subscription1. Subscription1 contains the resources in the following table.

| Name | Type |
|------|------|
| RG2 | Resource group |
| VNet1 | Virtual network |
| VNet2 | Virtual network |
| VM5 | Virtual machine connected to VNet1 |
| VM6 | Virtual machine connected to VNet2 |

In Azure, you create a private DNS zone named adatum.com. You set the registration virtual network to VNet2. The adatum.com
zone is configured as shown in the following exhibit.

| | | | |
|---|---|---|---|
| Resource group (change) | | Name server 1 | |

| vm1 | A | 3600 | 10.1.0.4 |
| vm9 | A | 3600 | 10.1.0.12 |

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

## Answer Area

| Statements | Yes | No |
|---|---|---|
| The A record for VM5 will be registered automatically in the adatum.com zone. | ○ | ○ |
| VM5 can resolve VM9.adatum.com. | ○ | ○ |
| VM6 can resolve VM9.adatum.com. | ○ | ○ |

**Answer:**

Explanation:

|---|---|
| Answer Area | |
| You can assign Policy1 to: | Management Group, Subscription1 only Tenant Root Group, ManagementGroup1, and Subscription1 only Tenant Root Group, ManagementGroup1, Subscription1, and RG1 only Tenant Root Group, ManagementGroup1, Subscription1, RG1, and VM1 |
| You can exclude Policy1 from: | VM1 only |

Explanation

| Statements | Yes | No |
|---|---|---|
| The A record for VM5 will be registered automatically in the adatum.com.zone. | ○ | ○ |
| VM5 can resolve VM9.adatum.com. | ○ | ○ |
| VM6 can resolve VM9.adatum.com. | ○ | ○ |

Box 1: No
Azure DNS provides automatic registration of virtual machines from a single virtual network that's linked to a private zone as a registration virtual network. VM5 does not belong to the registration virtual network though.
Box 2: No
Forward DNS resolution is supported across virtual networks that are linked to the private zone as resolution virtual networks. VM5 does belong to a resolution virtual network.
Box 3: Yes
VM6 belongs to registration virtual network, and an A (Host) record exists for VM9 in the DNS zone.
By default, registration virtual networks also act as resolution virtual networks, in the sense that DNS resolution against the zone works from any of the virtual machines within the registration virtual network.
