AZ-204 Pass4sure Dumps Pdf | Pass-Sure AZ-204: Developing Solutions for Microsoft Azure

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a AZ-204 certification in a short time. The AZ-204 exam prep is produced by our expert, is very useful to help customers pass their exams and get the certificates in a short time. We are going to show our AZ-204 Guide braindumps to you. We can sure that our product will help you get the certificate easily. If you are waiting to believe us and try to learn our AZ-204 exam torrent, you will get an unexpected result.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q327-Q332):

NEW QUESTION # 327

A web service provides customer summary information for e-commerce partners. The web service is implemented as an Azure Function app with an HTTP trigger. Access to the API is provided by an Azure API Management instance. The API Management instance is configured in consumption plan mode. All API calls are authenticated by using OAuth. API calls must be cached. Customers must not be able to view cached data for other customers. You need to configure API Management policies for caching.

How should you complete the policy statement?

The screenshot shows the 'Targets' list on the left with options: Expect, Public, Private, Internal, External, and Authorization. The 'Answer Area' on the right displays the XML policy statement for caching:

```
<policies>
  <inbound>
    <base />
    <cache-lookup caching-type="Target" downstream-caching-type = "Target" />
  </inbound>
  <vary-by-header>
    Target
  </vary-by-header>
</cache-lookup>
</inbound>
</policies>
```

Answer:

Explanation:

The screenshot shows the 'Targets' list on the left with options: Expect, Public, Private, Internal, External, and Authorization. The 'Answer Area' on the right displays the XML policy statement for caching:

```
<policies>
  <inbound>
    <base />
    <cache-lookup caching-type="Internal" downstream-caching-type = "Private" />
  </inbound>
  <vary-by-header>
    Authorization
  </vary-by-header>
</cache-lookup>
</inbound>
</policies>
```

Explanation

The screenshot shows the 'Targets' list on the left with options: Expect, Public, Private, Internal, External, and Authorization. The 'Answer Area' on the right displays the XML policy statement for caching:

```
<policies>
  <inbound>
    <base />
    <cache-lookup caching-type="Internal" downstream-caching-type = "Private" />
  </inbound>
  <vary-by-header>
    Authorization
  </vary-by-header>
</cache-lookup>
</inbound>
</policies>
```

Box 1: internal

caching-type

Choose between the following values of the attribute:

- * internal to use the built-in API Management cache,
- * external to use the external cache as Azure Cache for Redis
- * prefer-external to use external cache if configured or internal cache otherwise.

Box 2: private

downstream-caching-type

This attribute must be set to one of the following values.

- * none - downstream caching is not allowed.
- * private - downstream private caching is allowed.
- * public - private and shared downstream caching is allowed.

Box 3: Authorization

<vary-by-header>Authorization</vary-by-header>

<!-- should be present when allow-private-response-caching is "true"--> Note: Start caching responses per value of specified header, such as Accept, Accept-Charset, Accept-Encoding, Accept-Language, Authorization, Expect, From, Host, If-Match

NEW QUESTION # 328

You are developing an application that uses a premium block blob storage account. You are optimizing costs by automating Azure Blob Storage access tiers.

You apply the following policy rules to the storage account. You must determine the implications of applying the rules to the data. (Line numbers are included for reference only.)

```
01 {
02   "rules":
03   {
04     "name": "agingDataRule",
05     "enabled": true,
06     "type": "Lifecycle",
```

Answer Area

	Yes	No
Block blobs prefixed with container1/salesorders or container2/inventory which have not been modified in over 60 days are moved to cool storage. Blobs that have not been modified in 120 days are moved to the archive tier.	☐	☐
Blobs are moved to cool storage if they have not been accessed for 30 days.	☐	☒
Blobs will automatically be tiered from cool back to hot if accessed again after being tiered to cool.	☐	☐
All block blobs older than 730 days will be deleted.	☐	☐

Answer:

Explanation:

Answer Area

	Yes	No
Block blobs prefixed with container1/salesorders or container2/inventory which have not been modified in over 60 days are moved to cool storage. Blobs that have not been modified in 120 days are moved to the archive tier.	☒	☐
Blobs are moved to cool storage if they have not been accessed for 30 days.	☒	☐
Blobs will automatically be tiered from cool back to hot if accessed again after being tiered to cool.	☒	☐
All block blobs older than 730 days will be deleted.	☒	☐

Explanation

1. Yes
2. Yes
3. Yes
4. No

NEW QUESTION # 329

You are developing an application that use an Azure blob named data to store application data. The application creates blob snapshots to allow application state to be reverted to an earlier state. The Azure storage account has soft deleted enabled.

The system performs the following operations in order:

- *The blob is updated
- *Snapshot 1 is created.
- *Snapshot 2 is created.
- *Snapshot 1 is deleted.

A system error then deletes the data blob and all snapshots.

You need to determine which application states can be restored.

What is the restorability of the application data? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Application State	Restorability
Data blob	Can be restored Cannot be restored
Snapshot 1	Can be restored Cannot be restored
Snapshot 2	Can be restored Cannot be restored

Answer:

Explanation:

Application State	Restorability
Data blob	Can be restored Cannot be restored
Snapshot 1	Can be restored Cannot be restored
Snapshot 2	Can be restored Cannot be restored

Explanation

Application State

Restorability

Data blob	Can be restored Cannot be restored
Snapshot 1	Can be restored Cannot be restored
Snapshot 2	Can be restored Cannot be restored

Box 1: Can be restored

When enabled, soft delete enables you to save and recover your data when blobs or blob snapshots are deleted. This protection extends to blob data that is erased as the result of an overwrite.

Box 2: Cannot be restored

It has been deleted.

Box 3: Can be restored

It has not been deleted.

NEW QUESTION # 330

You manage several existing Logic Apps.

You need to change definitions, add new logic, and optimize these apps on a regular basis.

What should you use? To answer, drag the appropriate tools to the correct functionalities. Each tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Tools	Functionality	Tool
Logic Apps Designer	Edit B2B workflows	
Code View Editor	Edit definitions in JSON	
Enterprise Integration Pack	Visually add functionality	

Answer:

Explanation:

Tools	Functionality	Tool
Logic Apps Designer	Edit B2B workflows	Enterprise Integration Pack
Code View Editor	Edit definitions in JSON	Code View Editor
Enterprise Integration Pack	Visually add functionality	Logic Apps Designer

Explanation

Functionality	Tool
Edit B2B workflows	Enterprise Integration Pack
Edit definitions in JSON	Code View Editor
Visually add functionality	Logic Apps Designer

Box 1: Enterprise Integration Pack

After you create an integration account that has partners and agreements, you are ready to create a business to business (B2B) workflow for your logic app with the Enterprise Integration Pack.

Box 2: Code View Editor

To work with logic app definitions in JSON, open the Code View editor when working in the Azure portal or in Visual Studio, or copy the definition into any editor that you want.

Box 3: Logical Apps Designer

You can build your logic apps visually with the Logic Apps Designer, which is available in the Azure portal through your browser and in Visual Studio.

<https://docs.microsoft.com/en-us/azure/logic-apps/logic-apps-overview>

NEW QUESTION # 331

You are developing a data storage solution for a social networking app.

The solution requires a mobile app that stores user information using Azure Table Storage.

You need to develop code that can insert multiple sets of user information.

How should you complete the code? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```

CloudStorageAccount storageAccount = CloudStorageAccount.Parse(
    CloudConfigurationManager.GetSetting("StorageConnectionString"));
CloudTableClient tableClient = storageAccount.CreateCloudTableClient();
CloudTable table = tableClient.GetTableReference("clients");
Table.CreateIfNotExists();
op = new ( );
table. (op);

```

Options for the first dropdown (op = new):

- TableOperation
- TableBatchOperation
- TableEntity
- TableQuery

Options for the second dropdown (table. (op);):

- ExecuteBatch
- Execute
- Insert
- InsertOrMerge

Answer:

Explanation:

```
CloudStorageAccount storageAccount = CloudStorageAccount.Parse(
    CloudConfigurationManager.GetSetting("StorageConnectionString"));
CloudTableClient tableClient = storageAccount.CreateCloudTableClient()
CloudTable table = tableClient.GetTableReference("clients");
Table.CreateIfNotExists();
```
