

AZ-500 Exam Success | Valid AZ-500 Exam Camp

What's more, part of that TestValid AZ-500 dumps now are free: <https://drive.google.com/open?id=1wOfb3EMIoQcNVGwiat3t1J7IKkoAi86>

Our AZ-500 study tool can help you obtain the AZ-500 certification and own a powerful weapon for your interview. Our AZ-500 qualification test will help you gain recognition with true talents and better adapted to society. Now, I would like to give you a brief introduction in order to make you deepen your impression of our AZ-500 test guides. Our AZ-500 test guides have a higher standard of practice and are rich in content. If you are anxious about how to get AZ-500 certification, considering purchasing our AZ-500 study tool is a wise choice and you will not feel regretted. Our learning materials will successfully promote your acquisition of certification.

The AZ-500 certification exam is part of the Microsoft Certified: Azure Security Engineer Associate certification path. Candidates who pass AZ-500 exam will earn this certification and demonstrate their expertise in security management and administration in Azure. Microsoft Azure Security Technologies certification is ideal for security professionals who are responsible for managing and securing cloud-based workloads.

Microsoft AZ-500 Exam is a certification exam that focuses on Microsoft Azure Security Technologies. AZ-500 exam is designed for professionals who are responsible for managing and securing cloud services and solutions on the Azure platform. AZ-500 exam measures the candidate's knowledge and skills in implementing security controls, managing identity and access, protecting data, and responding to security incidents.

2025 AZ-500: Microsoft Azure Security Technologies –Trustable Exam Success

Sometimes hesitating will lead to missing a lot of opportunities. If you think a lot of our AZ-500 exam dumps PDF, you should not hesitate again. Too much hesitating will just waste a lot of time. Our AZ-500 exam dumps PDF can help you prepare casually and pass exam easily. If you make the best use of your time and obtain a useful certification you may get a senior position ahead of others. Chance favors the prepared mind. TestValid provide the best AZ-500 Exam Dumps Pdf materials in this field which is helpful for you.

Why Choose AZ-500?

This test is attributed to Microsoft Azure technologies associated with security. Only by acing it, the students can prove their abilities in the proper implementation of security control, identification, and access management, as well as in maintaining the security framework. What is more, this test is also associated with the Microsoft Certified: Azure Security Engineer Associate certification.

Microsoft Azure Security Technologies Sample Questions (Q247-Q252):

NEW QUESTION # 247

On Monday, you configure an email notification in Azure Security Center to notify user user1@contoso.com.

On Tuesday, Security Center generates the security alerts shown in the following table.

Time	Description	Severity
01:00	Failed RDP brute force attack	Medium
01:01	Successful RDP brute force attack	High
06:10	Suspicious process executed	High
09:00	Malicious SQL activity	High
11:15	Network communication with a malicious machine detected	Low
13:30	Suspicious process executed	High
14:00	Failed RDP brute force attack	Medium
16:01	Successful RDP brute force attack	High
23:20	Possible outgoing spam activity detected	Low
23:25	Modified system binary discovered in dump file	High
23:30	Malicious SQL activity	High

How many email notifications will user1@contoso.com receive on Tuesday? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Total number of Security Center email notifications about an RDP brute force attack on Tuesday:

1
2
3
4

Total number of Security Center email notifications on Tuesday:

3
4

NEW QUESTION # 248

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Azure Username: User1-10598168@ExamUsers.com

Azure Password: Ag1Bh9!#Bd

The following information is for technical support purposes only:

Lab Instance: 10598168

The developers at your company plan to create a web app named App10598168 and to publish the app to <https://www.contoso.com>.

You need to perform the following tasks:

- * Ensure that App10598168 is registered to Azure Active Directory (Azure AD).
- * Generate a password for App10598168.

To complete this task, sign in to the Azure portal.

Answer:

Explanation:

See the explanation below.

Explanation

Step 1: Register the Application

1. Sign in to your Azure Account through the Azure portal.
2. Select Azure Active Directory.

3. Select App registrations.
4. Select New registration.
5. Name the application App10598168 . Select a supported account type, which determines who can use the application. Under Redirect URI, select Web for the type of application you want to create. Enter the URI: <https://www.contoso.com> , where the access token is sent to.

Dashboard > Microsoft - App registrations > Register an application

Register an application

 If you are building an application for external users that will be distributed by Microsoft, you must register as a first party application to meet all security, privacy, and compliance policies. [Read our decision guide](#)

*** Name**
The user-facing display name for this application (this can be changed later).

Supported account types
Who can use this application or access this API?

☒ Accounts in this organizational directory only (Microsoft)

☐ Accounts in any organizational directory

☐ Accounts in any organizational directory and personal Microsoft accounts (e.g. Skype, Xbox, Outlook.com)

[Help me choose...](#)

Redirect URI (optional)
We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be changed later, but a value is required for most authentication scenarios.

[By proceeding, you agree to the Microsoft Platform Policies](#)

[Register](#)

6. Click Register

Step 2: Create a new application secret

If you choose not to use a certificate, you can create a new application secret.

- 7 Select Certificates & secrets.

8. Select Client secrets -> New client secret.

9. Provide a description of the secret, and a duration. When done, select Add.

After saving the client secret, the value of the client secret is displayed. Copy this value because you aren't able to retrieve the key later. You provide the key value with the application ID to sign in as the application.

Store the key value where your application can retrieve it.

NEW QUESTION # 249

Your company has an Azure subscription named Subscription1. Subscription1 is associated with the Azure Active Directory tenant that includes the users shown in the following table.

Name	Role
User1	Global administrator
User2	Billing administrator
User3	Owner
User4	Account Admin

The company is sold to a new owner.

The company needs to transfer ownership of Subscription1.

Which user can transfer the ownership and which tool should the user use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

User: Microsoft ▼

NEW QUESTION # 250

You have an Azure subscription named Sub1 that contains the virtual machines shown in the following table.

Name	Resource group
VM1	RG1
VM2	RG2
VM3	RG1
VM4	RG2

You need to ensure that the virtual machines in RG1 have the Remote Desktop port closed until an authorized user requests access. What should you configure?

- A. an application security group
- B. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
- C. just in time (JIT) VM access
- D. Azure Active Directory (Azure AD) conditional access

Answer: A

Explanation:

Just-in-time (JIT) virtual machine (VM) access can be used to lock down inbound traffic to your Azure VMs, reducing exposure to attacks while providing easy access to connect to VMs when needed.

Note: When just-in-time is enabled, Security Center locks down inbound traffic to your Azure VMs by creating an NSG rule. You select the ports on the VM to which inbound traffic will be locked down. These ports are controlled by the just-in-time solution. When a user requests access to a VM, Security Center checks that the user has Role-Based Access Control (RBAC) permissions that permit them to successfully request access to a VM. If the request is approved, Security Center automatically configures the Network Security Groups (NSGs) and Azure Firewall to allow inbound traffic to the selected ports and requested source IP addresses or ranges, for the amount of time that was specified. After the time has expired, Security Center restores the NSGs to their previous states. Those connections that are already established are not being interrupted, however.

NEW QUESTION # 251

Lab Task

use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Azure Username: User1-28681041@ExamUsers.com

Azure Password: GpOAe4@lDg

If the Azure portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 28681041

Task 1

You need to configure Azure to allow RDP connections from the Internet to a virtual machine named VM1.

The solution must minimize the attack surface of VM1.

Answer:

Explanation:

Check below steps in explanation for Task.

Explanation

To configure Azure to allow RDP connections from the Internet to a virtual machine named VM1, you can follow the steps below:

Create a new inbound security rule in the network security group (NSG) that is associated with the virtual network subnet that contains VM1. The rule should allow RDP traffic from the Internet to the virtual network subnet. You can use the Azure portal, Azure PowerShell, or Azure CLI to create the rule.

Configure the network security group (NSG) to associate it with the virtual network subnet that contains VM1.

Configure the virtual machine to allow RDP traffic. You can use the Azure portal, Azure PowerShell, or Azure CLI to configure the virtual machine.

To minimize the attack surface of VM1, you can use the following best practices:

Use a strong password for the local administrator account on the virtual machine.

Use Network Security Groups (NSGs) to restrict traffic to only the necessary ports and protocols.

Use Azure Security Center to monitor and protect your virtual machines.
