VCE AZ-800 Exam Simulator | Valid Braindumps AZ-800 Free

In your day-to-day life, things look like same all the time, but preparing for critical AZ-800 practice exam is not one of those options. About the exam ahead of you this time, our AZ-800 study braindumps will be your indispensable choices. Before you get the official one, you can estimate our quality by downloading the free demos. You will pay just a small amount of money on our AZ-800 Exam Guide but harvest colossal success with potential bright future. And we have confidence that your future aims will come along with this successful exam as the beginning. So choosing AZ-800 actual question is choosing success.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q278-Q283):

NEW QUESTION # 278

You have an on-premises server named Server1 that runs Windows Server. You have an Azure virtual network that contains an Azure virtual network gateway. You need to connect only Server1 to the Azure virtual network. What should you use?

- A. Azure Extended Network
- B. an ExpressRoute circuit
- C. Azure Network Adapter
- **D. a Site-to-SiteVPN**

Answer: D

Explanation:

Reference:

NEW QUESTION # 279

Drag and Drop Question

You have an Azure subscription. The subscription contains a virtual machine named VM1 that runs Windows Server. VM1 contains a 128-GB operating system disk.

You need to increase the size of volume C on VM1 to 250 GB.

Which four actions should you perform in sequence.

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Redeploy VM1.
- Resize VM1.
- Start VM1.
- Resize the operating system disk.
- Resize volume C.
- Stop VM1.

Answer Area

Microsoft

NEW QUESTION # 280

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2022 and has the DHCP Server role. Server1 contains a single DHCP scope named Scope1.

You deploy five printers to the network.

You need to ensure that the printers are always assigned the same IP address.

Solution: You deploy a DHCP relay agent to the network.

Does this meet the requirement?

- A. No
- B. Yes

Answer: A

Explanation:

Correct:

* You create a DHCP reservation for each printer.

Incorrect:

* You create a DHCP address exclusion for each printer.

* You configure the DHCP scope options for Scope1.

* You deploy a DHCP relay agent to the network.

Note:

To configure a specific MAC address to receive an IP address from a particular DHCP scope, you would need to implement DHCP reservations. DHCP reservations allow you to assign a specific IP address to a device based on its MAC address.

NEW QUESTION # 281

You have a server named Host1 that runs Windows Server 2022 and is configured as a container host. Host1 stores a container image named image1 that is based on Windows Server 2019.

You need to start a container from image1 on Host1.

How should you complete the command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 282

Task 3

You need to configure SRV1 as a DNS server. SRV1 must be able to resolve names from the contoso.com domain by using DC1. All other names must be resolved by using the root hint servers.

Answer:

Explanation:

See the solution of this Task below.

Explanation:

One possible solution to configure SRV1 as a DNS server that can resolve names from the contoso.com domain by using DC1 and all other names by using the root hint servers is to use conditional forwarding.

Conditional forwarding allows a DNS server to forward queries for a specific domain name to another DNS server, while using the normal forwarding or root hint servers for other queries. Here are the steps to configure conditional forwarding on SRV1:

- * On SRV1, open DNS Manager from the Administrative Tools menu or by typing dnsmgmt.msc in the Run box.
- * In the left pane, right-click on Conditional Forwarders and select New Conditional Forwarder.
- * In the New Conditional Forwarder dialog box, enter contoso.com as the DNS Domain name.
- * In the IP addresses of the master servers box, enter the IP address of DC1, which is the DNS server for the contoso.com domain. You can also click on Resolve to verify the name resolution of DC1.
- * Optionally, you can check the box Store this conditional forwarder in Active Directory, and replicate it as follows if you want to store and replicate the conditional forwarder in AD DS. You can also select the replication scope from the drop-down list.
- * Click OK to create the conditional forwarder.

Now, SRV1 will forward any queries for the contoso.com domain to DC1, and use the root hint servers for any other queries. You can test the name resolution by using the nslookup command on SRV1 or another computer that uses SRV1 as its DNS server. For example, you can run the following commands:

nslookup www.contoso.com

nslookup www.microsoft.com

The first command should return the IP address of www.contoso.com from DC1, and the second command should return the IP address of www.microsoft.com from a root hint server.

NEW QUESTION # 283

.....

In order to facilitate the wide variety of users' needs the AZ-800 study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of AZ-800 study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the AZ-800 simulating materials of this learning model, such as computer, phone, laptop and so on.
