## Valid AZ-800 Test Book, Updated AZ-800 Test Cram

We give priority to the user experiences and the clients' feedback, AZ-800 practice guide will constantly improve our service and update the version to bring more conveniences to the clients and make them be satisfied. The clients' satisfaction degrees about our AZ-800 training materials are our motive force source to keep forging ahead. Now you can have an understanding of our AZ-800 Guide materials. Every subtle change in the mainstream of the knowledge about the AZ-800 certification will be caught and we try our best to search the AZ-800 study materials resources available to us.

To be eligible for the Microsoft AZ-800 Certification Exam, IT professionals must have experience in managing Windows Server, Azure, and hybrid environments. They must also have a strong understanding of virtualization, networking, storage, security, and disaster recovery. AZ-800 exam consists of multiple-choice questions and is designed to test an IT professional's ability to manage and administer Windows Server Hybrid Core Infrastructure. Candidates who pass the exam will receive a Microsoft Certified: Azure Stack HCI Administrator Associate certification.

## Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q16-Q21):

## NEW QUESTION # 16

### SIMULATION

You need to ensure that the minimum password length for members of the BranchAdmins group is 12 characters. The solution must affect only the BranchAdmins group.

To complete this task, sign in the required computer or computers.

### Answer:

#### Explanation:

Create a new fine-grained password policy.

In the following procedure you will create a new fine-grained password policy using the UI in ADAC.

To create a new fine-grained password policy.

Step 1: Right click the Windows PowerShell icon, click Run as Administrator and type dsac.exe to open ADAC.

Step 2: Click Manage, click Add Navigation Nodes and select the appropriate target domain in the Add Navigation Nodes dialog box and then click OK.

Step 3: Click Manage, click Add Navigation Nodes and select the appropriate target domain in the Add Navigation Nodes dialog box and then click OK.

Step 4: In the Tasks pane, click New, and then click Password Settings.

Fill in or edit fields inside the property page to create a new Password Settings object. The Name and Precedence fields are required.

In our case:

Minimum password length: 12

Microsoft

Create Password Settings: TestPswd

TASKS SECTIONS

Password Settings

## NEW QUESTION # 17

You have an Active Directory Domain Services (AD DS) domain that contains the domain controllers shown in the following table.

| Name | Operations master role   |
|------|--------------------------|
| DC1  | Schema master            |
| DC2  | Infrastructure master    |
| DC3  | Domain naming master     |
| DC4  | PDC emulator, RID master |

The domain contains an app named App1 that uses a custom application partition to store configuration data.

You decommission App1.

When you attempt to remove the custom application partition, the process fails.

Which domain controller is unavailable?

- A. DC4
- B. DC1
- C. DC3
- D. DC2

**Answer: C**

#### NEW QUESTION # 18

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains a user named User1. User1 is a member of a group named Group1 and is in an organizational unit (OU) named OU1.

The domain has minimum password lengths configured as shown in the following table.

| Value | Location                                   |
|-------|--------------------------------------------|
| 10    | Default Domain Policy                      |
| 12    | Default Domain Controllers Policy          |
| 8     | Group Policy linked to OU1                 |
| 14    | Password settings object applied to Group1 |
| 7     | Password settings object applied to User1  |

What is the minimum password length that User1 should use when changing to a new password?

- A. 0
- B. 1
- C. 2
- D. 3
- E. 4

**Answer: A**

#### NEW QUESTION # 19

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains the domain controllers shown in the following table.

| Name  | Description                                         |
|-------|-----------------------------------------------------|
| DC1   | PDC emulator, RID master, and global catalog server |
| DC2   | Infrastructure master and domain naming master      |
| DC3   | Schema master                                       |
| RODC1 | Read-only domain controller (RODC)                  |

You need to ensure that if an attacker compromises the computer account of RODC1, the attacker cannot view the Employee-Number AD DS attribute. Which partition should you modify?

- A. configuration
- B. domain

- C. schema
- D. global catalog

Answer: C

### NEW QUESTION # 20

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

| Name | IP address    |
|------|---------------|
| VPN1 | 172.16.0.254  |
| VPN2 | 131.10.15.254 |
| VPN3 | 10.10.0.254   |

You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

|                       |                   |
|-----------------------|-------------------|
| Name                  | : NPSclient1      |
| Address               | : 172.16.0.254    |
| AuthAttributeRequired | : False           |
| SharedSecret          | : Pa\$sw.rd       |
| VendorName            | : RADIUS Standard |
| Enabled               | : False           |
| Name                  | : NPSclient2      |
| Address               | : 131.10.15.254   |
| AuthAttributeRequired | : False           |
| SharedSecret          | : Pa\$sw.rd       |
| VendorName            | : RADIUS Standard |
| Enabled               | : True            |
| Name                  | : NPSclient3      |
| Address               | : 172.16.1.254    |
| AuthAttributeRequired | : False           |
| SharedSecret          | : Pa\$sw.rd       |
| VendorName            | : RADIUS Standard |
| Enabled               | : True            |

VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

#### Statements

- The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1.
- The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2.
- The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3.

Yes

No

Answer:

Explanation:

| Statements                                                                                        | Yes                              | No                               |
|---------------------------------------------------------------------------------------------------|----------------------------------|----------------------------------|
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN1. | <input type="radio"/>            | <input type="radio"/>            |
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN2. | <input checked="" type="radio"/> | <input type="radio"/>            |
| The contoso.com users can authenticate successfully when they establish a VPN connection to VPN3. | <input type="radio"/>            | <input checked="" type="radio"/> |
