Don't Know Where to Start Your Microsoft AZ-800 Exam Preparation? We've Got You Covered

To buy after trial! Our VCE4Plus is responsible for every customer. We provide for you free demo of AZ-800 exam software to let you rest assured to buy after you have experienced it. And we have confidence to guarantee that you will not regret to buy our AZ-800 Exam simulation software, because you feel it's reliability after you have used it; you can also get more confident in AZ-800 exam.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q151-Q156):

NEW QUESTION # 151

You have a Group Policy Object (GPO) named GPO1 that contains user settings only.

You plan to apply GPO1 to a global security group named Group1.

You link GPO1 to the domain, and you remove all the permissions granted to the Authenticated Users group.

You need to configure permissions for GP01 to meet the following requirements.

- * GP01 must apply only to the users in Group 1.
- * The solution must use the principle of least privilege

Answer Area

Answer:

Explanation:

Explanation:

NEW QUESTION # 152

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: On Server2, you create a conditional forwarder for west.contoso.local. On Server3, you create a conditional forwarder for east.contoso.local.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

NEW QUESTION # 153

Your on-premises network contains a single-domain Active Directory Domain Services (AD DS) forest. You have an Azure AD tenant named contoso.com. The AD DS forest syncs with the Azure AD tenant by using Azure AD Connect.

You need to ensure that users in the forest that have a custom attribute of NoSync are excluded from synchronization.

How should you configure the Azure AD Connect cloudFiltered attribute, and which tool should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

NEW QUESTION # 154

You have an Active Directory domain that contains a file server named Server1. Server1 runs Windows Server and includes the file shares shown in the following table.

Share Name	Path
Users	D:\Users
Accounts	D:\Dept\Accounts
Marketing	D:\Dept\Marketing
CustomerService	D:\Dept\CustomerService

When users login to the network they receive the following network drive mappings.

* H: maps to Wserver1\users\%UserName%

* G: maps to \\server1\%Department%

You need to limit the amount of space consumed by user's on Server1. The solution must meet the following requirements:

- * Prevent users using more than 5GB of space on their H: drive
- * Prevent Accounts department users from using more than 10GB of space on the G: drive
- * Prevent Marketing department users from using more than 15GB of space on the G: drive
- * Prevent Customer Service department users from using more than 2GB of space on the G: drive
- * Minimize administrative effort

What should you use?

- A. Storage tiering

- B. Group Policy Preferences
- **C. File Server Resource Manager (FSRM) quotas**
- D. NTFS Disk quotas

Answer: C

NEW QUESTION # 155

You have an on-premises network that is connected to an Azure virtual network by using a Site-to-Site VPN. Each network contains a subnet that has the same IP address space. The on-premises subnet contains a virtual machine.

You plan to migrate the virtual machine to the Azure subnet.

You need to migrate the on-premises virtual machine to Azure without modifying the IP address.

The solution must minimize administrative effort.

What should you implement before you perform the migration?

- A. Azure virtual network peering
- B. Azure Application Gateway
- C. Azure Virtual Network NAT
- **D. Azure Extended Network**

Answer: D
