Microsoft recommends that candidates for the AZ-801 exam have a solid understanding of Windows Server administration, including identity management, network infrastructure, storage solutions, and virtualization technologies. Candidates should also have experience with Microsoft Azure, as well as knowledge of PowerShell scripting and other automation tools.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q71-Q76):

NEW QUESTION # 71

You are planning the DHCP1 migration to support the DHCP migration plan.

Which two PowerShell cmdlets should you run on DHCP1, and which two PowerShell cmdlets should you run on DHCP2? To answer, drag the appropriate cmdlets to the correct servers. Each cmdlet may be used once, more than once, or not at all. You may

need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Cmdlets	Answer Area
Add-DhcpServerInDC	DHCP1: Cmdlet
Add-DhcpServerv4Scope	Cmdlet
Export-DhcpServer	DHCP2: Cmdlet
Import-DhcpServer	Cmdlet
Remove-DhcpServerInDC	
Remove-DhcpServerv4Scope	

Answer:

Explanation:

Cmdlets	Answer Area
Add-DhcpServerInDC	DHCP1: Export-DhcpServer
Add-DhcpServerv4Scope	Remove-DhcpServerInDC
Export-DhcpServer	DHCP2: Add-DhcpServerInDC
Import-DhcpServer	Import-DhcpServer
Remove-DhcpServerInDC	
Remove-DhcpServerv4Scope

NEW QUESTION # 72

You have a failover cluster named Cluster1 that contains two Windows Server nodes named Server1 and Server2. Cluster1 hosts highly available Hyper-V virtual machines.

You have a member server named Server3 that runs Windows Server.

You need to implement Cluster-Aware Updating (CUA) on Cluster1 and configure Server3 to manage CUA.

The solution must minimize administrative effort.

What should you install on Server3?

- A. the Host Guardian Service server role
- B. the Failover Cluster Automation Server feature
- **C. Windows Admin Center**
- D. the Windows Server Update Services server role

Answer: C

NEW QUESTION # 73

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains two servers named Server1 and Server2 that run Windows Server.

On Server1, you create an event subscription named Subscription1 that retrieves events from Server2. The Query Filter settings (or Subscription1) are configured as shown in the following exhibit.

Query Filter

Filter XML

Logged: Any time

Event level: ☐ Critical ☒ Warning ☐ Verbose
☐ Error ☒ Information

☒ By log Event logs: Application, Security, Setup
☐ By source Event sources:

Includes/Excludes Event IDs: Enter ID numbers and/or ID ranges separated by commas. To exclude criteria, type a minus sign first. For example 1,3,5-99,-76

<All Event IDs>

Task category:

Keywords:

User: <All Users>

Computer(s): <All Computers>

Clear

OK Cancel

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
 NOTE: Each correct selection is worth one point.

Answer Area

Statements

Critical events created in the System log on Server2 are visible in View1. Yes No

Warning events created in the Setup log on Server1 are visible in View1. Yes No

Information events created in the Application log on Server2 are forwarded to Server1. Yes No

Answer:

Explanation:

Answer Area

Statements

Critical events created in the System log on Server2 are visible in View1. Yes No

Warning events created in the Setup log on Server1 are visible in View1. Yes No

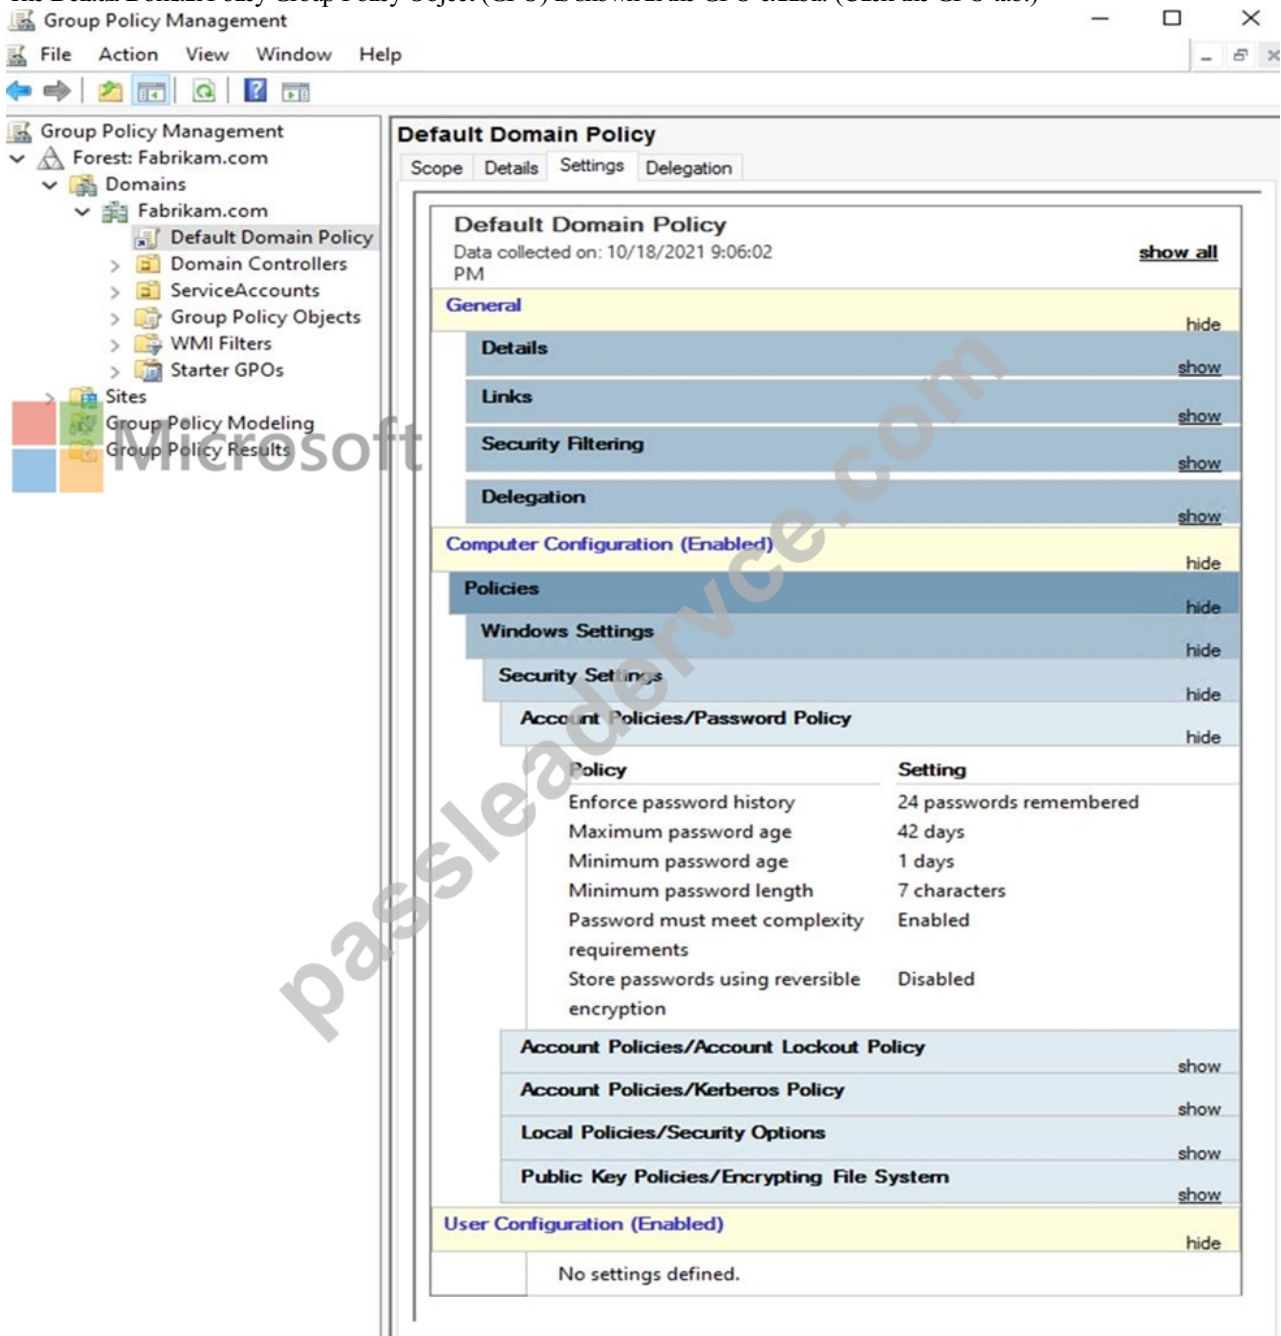

Information events created in the Application log on Server2 are forwarded to Server1. Yes No
