### Fortinet NSE 7 - OT Security 7.2 Sample Questions (Q73-Q78):

#### NEW QUESTION # 73

As an OT network administrator you are required to generate reports that primarily use the same type of data sent to FortiSIEM. These reports are based on the preloaded analytic searches. Which two actions can you take on FortiSIEM to enhance running reports for future use? (Choose two.)

- A. Automate running these reports upon receiving new logs
- B. Create custom reports to process additional analytic searches
- C. Export the preloaded analytics searches to an external syslog server
- D. Save the analytic searches and turn them into report definitions

Answer: B,D

#### NEW QUESTION # 74

A FortiGate device is newly deployed as the edge gateway of an OT network security fabric. The downstream FortiGate devices are also newly deployed as Security Fabric leafs to protect the control area zone.

With no additional essential networking devices, and to implement micro-segmentation on this OT network, what configuration must the OT network architect apply to control intra-VLAN traffic?

- A. Set up VPN tunnels between downstream and edge FortiGate devices.
- **B. Create a software switch on each downstream FortiGate device.**
- C. Enable transparent mode on the edge FortiGate device.
- D. Enable security profiles on all interfaces connected in the control area zone.

**Answer: B**

Explanation:

A software switch groups multiple interfaces at Layer 2.

However, for micro-segmentation, you usually separate interfaces per subnet/device group and apply inter-interface policies on the FortiGate.

By doing this, the FortiGate can control intra-VLAN (or intra-subnet) traffic without additional networking hardware.

#### NEW QUESTION # 75

Which statement is correct about processing matched rogue devices by FortiNAC?

- A. FortiNAC cannot revalidate matched devices.
- B. FortiNAC disables matching rule of previously-profiled rogue devices.
- C. FortiNAC matches the rogue device with only one device profiling rule.
- **D. FortiNAC remembers the matching rule of the rogue device.**

**Answer: D**

Explanation:

When FortiNAC matches a rogue device to a profiling rule, it remembers that matching rule.

FortiNAC revalidates the device against that rule each time it connects or at user-defined intervals.

If the device no longer matches the rule on revalidation, FortiNAC can automatically disable the device as a safeguard.

FortiNAC does not disable matching rules for previously profiled rogue devices, nor does it match a rogue device with only one profiling rule exclusively. Profiling rules can be multiple, but the device is associated with the rule it first matched.

#### NEW QUESTION # 76

Refer to the exhibit. Given the configurations on the FortiGate, which statement is true?

```
config system interface
  edit VLAN101_dmz
    set forward-domain 101
  next
  edit VLAN101_internal
    set forward-domain 101
end
```

- A. FortiGate is configured with forward-domains to forward only domain controller traffic.
- B. FortiGate is configured with forward-domains to filter and drop non-domain controller traffic.
- C. FortiGate is configured with forward-domains to forward only company domain website traffic.
- **D. FortiGate is configured with forward-domains to reduce unnecessary traffic.**

Answer: D

### NEW QUESTION # 77
