Exam 1Z0-1151-25 Questions Pdf & 1Z0-1151-25 Latest Exam Pattern

DOWNLOAD the newest Easy4Engine 1Z0-1151-25 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1f_Pfc23y8fXROfRLvXqRi7WMZQ6_Hyjm

Whatever 1Z0-1151-25 Exam, you are taking; the study guides of Easy4Engine are there to help you get through the exam without any hassle. The questions and answers are absolutely exam oriented, focusing only the most essential part of your exam syllabus. Thus they save your time and energy going waste in thumbing through the unnecessary details.

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, so about how to get the test Oracle certification didn't own a set of methods, and cost a lot of time to do something that has no value. With our 1Z0-1151-25 exam Practice, you will feel much relax for the advantages of high-efficiency and accurate positioning on the content and formats according to the candidates' interests and hobbies. Numerous grateful feedbacks form our loyal customers proved that we are the most popular vendor in this field to offer our 1Z0-1151-25 Preparation questions.

>> Exam 1Z0-1151-25 Questions Pdf <<

1Z0-1151-25 Latest Exam Pattern, Standard 1Z0-1151-25 Answers

The study system of our company will provide all customers with the best study materials. If you buy the 1Z0-1151-25 latest questions of our company, you will have the right to enjoy all the 1Z0-1151-25 certification training materials from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the 1Z0-1151-25 Training Materials, we can guarantee that our company can provide the newest information about the 1Z0-1151-25 exam for all people.

Oracle Cloud Infrastructure 2025 Multicloud Architect Professional Sample Questions (Q23-Q28):

NEW QUESTION # 23
What is the purpose of a Network Security Group (NSG) in OCI?

- A. To provide a virtual firewall at the VNIC level, allowing for granular security policies based on source and destination NSGs.
- B. To define routing policies for subnets within a VCN.
- C. To provide DNS resolution services for instances within a VCN.
- D. To act as a central point for managing internet access for all subnets in a VCN.

Answer: A

Explanation:
Here's a breakdown of Network Security Groups (NSGs) in OCI:
Virtual Firewall at the VNIC Level: NSGs act as virtual firewalls that control traffic at the Virtual Network Interface Card (VNIC) level. This means you can apply security rules to individual instances or groups of instances by associating them with NSGs.
Granular Security Policies: NSGs allow you to define granular security policies based on:
Source and Destination IP addresses or CIDR blocks: You can specify which IP addresses or CIDR blocks are allowed to send or receive traffic.
Source and Destination Ports: You can specify which TCP or UDP ports are allowed.
Protocols: You can specify which protocols (e.g., TCP, UDP, ICMP) are allowed.
Source and Destination NSGs: This is a key feature. You can create rules that allow traffic between specific NSGs, creating micro-segmentation within your VCN.
Why other options are incorrect:
A). To define routing policies for subnets within a VCN: Routing policies are defined by Route Tables, not NSGs.
B). To act as a central point for managing internet access for all subnets in a VCN: Internet access is managed by an Internet Gateway and associated Route Tables, not NSGs. While NSGs can control traffic entering and leaving a subnet via the Internet Gateway, that is not their primary function.
D). To provide DNS resolution services for instances within a VCN: DNS resolution is provided by a DNS Resolver within the VCN, not NSGs.

NEW QUESTION # 24
Which of the following is NOT a benefit of using Oracle Interconnect for Azure compared to an IPsec VPN solution for connecting OCI and Azure?

- A. Higher bandwidth and lower latency.
- B. Dynamic routing with BGP.
- C. Inherent encryption of all traffic traversing the connection.
- D. Simplified network management.

Answer: C

Explanation:
While Oracle Interconnect for Azure provides a private, dedicated connection, it does not inherently encrypt the traffic. The connection itself is secure in the sense that it's not traversing the public internet, but data encryption needs to be implemented at higher layers (e.g., using TLS/SSL at the application level, or using IPsec VPNs over the Interconnect if needed).
Here's why the other options are benefits:
a) Higher bandwidth and lower latency: FastConnect and ExpressRoute provide significantly higher bandwidth and lower latency compared to IPsec VPNs, which are limited by internet bandwidth and introduce more overhead.
b) Dynamic routing with BGP: Oracle Interconnect for Azure uses BGP (Border Gateway Protocol) for dynamic routing between the two cloud environments.
c) Simplified network management: With a dedicated connection and BGP, network management is generally simpler compared to managing multiple IPsec VPN tunnels, especially as network requirements scale.

NEW QUESTION # 25
What steps must be completed during the onboarding process for Oracle Database@Google Cloud?

- A. My Oracle Support registration and RBAC assignment
- B. Account linking and identity federation
- C. Purchase and configuration
- D. Google Cloud project creation and OCI account subscription

Answer: C

Explanation:

The onboarding process for Oracle Database@Google Cloud primarily involves purchasing the service (via Google Cloud Marketplace) and configuring the resources (e.g., Exadata Infrastructure in GCP). Options B, C, and D include preparatory or optional steps, but the core onboarding focuses on purchase and initial setup, as per Oracle's documentation. This streamlined process reflects the service's integration into GCP workflows.

NEW QUESTION # 26

What is the role of ExpressRoute in the context of Oracle Interconnect for Azure?

- A. ExpressRoute is used to encrypt the traffic between OCI and Azure.
- B. ExpressRoute provides a backup connection in case the primary Interconnect link fails
- C. ExpressRoute is used to manage the routing tables within the OCI VCN for traffic destined to Azure.
- D. ExpressRoute is Microsoft Azure's dedicated private connection service, providing the physical connection point for the Interconnect.

Answer: D

Explanation:
Here's a breakdown:
ExpressRoute is Microsoft's service that lets you create private connections between Azure datacenters and infrastructure on your premises or in a colocation environment. In the context of Oracle Interconnect for Azure, ExpressRoute provides the Azure-side of the dedicated connection between the two clouds.
Why other options are incorrect:
A). ExpressRoute is used to encrypt the traffic between OCI and Azure. While ExpressRoute provides a private connection, it doesn't inherently encrypt the traffic. Encryption can be implemented at higher layers (e.g., using VPNs or application-level encryption) if needed.
C). ExpressRoute is used to manage the routing tables within the OCI VCN for traffic destined to Azure. Routing within the OCI VCN is managed by OCI's networking components, primarily the Dynamic Routing Gateway (DRG). ExpressRoute handles routing on the Azure side.
D). ExpressRoute provides a backup connection in case the primary Interconnect link fails. While redundancy can be designed into the Interconnect architecture, ExpressRoute itself is the primary connection method on the Azure side, not a backup

NEW QUESTION # 27

What is the role of the "Availability Domain" concept in the context of Oracle Database@Azure provisioning?

- A. It is not relevant as the Exadata system is deployed in a single Azure data center.
- B. It determines the physical location of the Exadata hardware within the Azure data center.
- C. It maps directly to Azure Availability Zones.
- D. It plays the same role as in a standard OCI region, providing fault tolerance within the Exadata deployment.

Answer: D

Explanation:
Even though the Exadata infrastructure is interconnected with Azure, the Exadata hardware itself resides within an OCI region. Therefore, the concept of Availability Domains (ADs) is still relevant. Within that OCI region, the Exadata infrastructure can be distributed across different ADs to provide high availability and fault tolerance.

NEW QUESTION # 28
