If you really lack experience, you do not know which one to choose. You can consult our professional staff.

Microsoft MB-500 exam is an essential certification for developers who work with Dynamics 365 Finance and Operations applications. MB-500 exam measures the candidate's skills in developing customizations and extensions for Dynamics 365 Finance and Operations applications. It also tests the candidate's knowledge of various development tools and methodologies used in Dynamics 365 Finance and Operations environments. Passing the MB-500 Exam demonstrates the candidate's ability to develop high-quality applications that meet the business requirements of their clients.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q43-Q48):

NEW QUESTION # 43

You are a Dynamics 365 Finance and Operations developer.

You have a report in an existing model that connects with the following objects:

in-memory table

data provider class

controller class

contract class

The report is locked for modifications.

You need to create an extension of the in-memory table in a model and you add the new field to the extension.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Create a duplicate from the report in the model and add the new field on the report design.	
Create an extension of the existing report controller class in the model. Update the class logic to point to the new report.	
Create a duplicate from the existing data provider class in the model. Update the class to fill the value of the newly added field.	
Create a duplicate from the existing report controller class in the model. Update the class logic to point to the new report.	
Create an extension of the existing data provider class in the model. Update the class to fill the value of the newly added field.	

Answer:

Explanation:

Actions	Answer Area
Create a duplicate from the report in the model and add the new field on the report design.	Create a duplicate from the report in the model and add the new field on the report design.
Create an extension of the existing report controller class in the model. Update the class logic to point to the new report.	Create a duplicate from the existing data provider class in the model. Update the class to fill the value of the newly added field.
Create a duplicate from the existing data provider class in the model. Update the class to fill the value of the newly added field.	Create an extension of the existing report controller class in the model. Update the class logic to point to the new report.
Create a duplicate from the existing report controller class in the model. Update the class logic to point to the new report.	
Create an extension of the existing data provider class in the model. Update the class to fill the value of the newly added field.	

Explanation

NEW QUESTION # 44

You are a Dynamics 365 Finance developer. You have the following Extended Data Types (EDTs):

Name	Comments
AccountBase	Root EDT
AccountID	Derives from AccountBase

You plan to modify the properties of the EDTs by using an extension. You need to determine which operations can be performed. Which operation is possible?

- A. Create a derived EDT for AccountBase and increase the field size.
- **B. Create an extension for AccountBase and modify the Form Help property.**
- C. Create a derived EDT for AccountID and increase the field size.
- D. Create an extension for AccountID and decrease the field size.

Answer: B

NEW QUESTION # 45

A company uses Dynamics 365 Finance. You are customizing elements for the extended data types (EDTs) shown in the following table.

EDT name	Comment
CalendarID	root EDT
CalendarName	root EDT
BasicCalendarID	derives from CalendarID

You have a table named WorkCalendar. The table has a column named BasicCalendarID that uses the BasicCalendarID EDT. You need to increase the length of the column by using an extension.

Solution: Create an extension for CalendarName.

Does the solution meet the goal?

- A. Yes

- B. No

Answer: B

NEW QUESTION # 46

You develop apps for Dynamics 365 Supply Chain Management.
You need to track changes only for sales header information by using data entities.
Which change tracking option should you use?

- A. Disable change tracking
- B. Enable custom query
- C. Enable entire entity
- D. Enable primary table

Answer: B

NEW QUESTION # 47

You need to apply a form pattern to the Vendor exclusion list. Which pattern should you use?

- A. List Page
- B. Workspace
- C. Simple List
- D. List View

Answer: C

Explanation:

Explanation

A list page presents a set of data on a user interface that is optimized so that you can browse records, find the right record, and then take an action upon that record. The list page lets the user search, filter, and sort the data. FactBoxes on the right side of the grid show related data for the active record. Actions that are relevant to the record are located on the ActionPane at the top of the page.

Scenario: You must develop a new solution to maintain a Vendor exclusion list for each customer and item combination. The solution must meet the following requirements:

- * Isolate all new vendor exclusion codes as a new assembly by creating a table named VendExclusions.
- * Create an index for the table named PrimaryIdx that uses the following fields: CustAccount, ItemId, VendAccount.
- * Ensure that users can open the Vendor Exclusion list report from the customer master form. The list must display the customer account, Item ID, and Vendor account fields.
