問題 #153

You have an Azure subscription that contains the resources shown in the following table.

VM1 connects to VNET1.

You need to connect VM1 to VNET2.

Solution: You turn off VM1, and then you add a new network interface to VM1. Does this meet the goal?

- A. No
- B. Yes

答案: A

解題說明:

Instead you should delete VM1. You recreate VM1, and then you add the network interface for VM1.

Note: When you create an Azure virtual machine (VM), you must create a virtual network (VNet) or use an existing VNet. You can change the subnet a VM is connected to after it's created, but you cannot change the VNet.

問題 #156

You have an Azure subscription that contains the resource groups shown in the following table.

RG1 contains the resources shown in the following table.

RG2 contains the resources shown in the following table.

You need to identify which resources you can move from RG1 to RG2, and which resources you can move from RG2 to RG1.

Which resources should you identify? To answer, select the appropriate options in the answer area.

答案：

解題說明：

Explanation

Read only and Delete lock won't prevent you from moving resources in different resource groups. It will prevent you to do the operations in the resource group where the resources are there.

So the correct answer should be

RG1 --> RG2 = IP1, vnet1 and storage1

RG2 --> RG1 = IP2, vnet2 and storage2
