## Original Integration-Architect Questions | Integration-Architect Test Pdf

PassLeaderVCE is professional platform to establish for compiling Integration-Architect exam materials for candidates, and we aim to help you to pass the examination as well as getting the related certification in a more efficient and easier way. Owing to the superior quality and reasonable price of our Integration-Architect Exam Materials, our Integration-Architect exam torrents are not only superior in price than other makers in the international field, but also are distinctly superior in many respects.

To become a Salesforce Certified Integration Architect, you must pass the Integration-Architect exam. Integration-Architect exam measures your ability to design and implement complex integration solutions using various tools and technologies. Integration-Architect exam consists of multiple-choice questions, and you must score at least 65% to pass the exam. Integration-Architect Exam is designed to test your knowledge and skills in various areas, including integration architecture, data integration, security, and performance.

## Salesforce Certified Integration Architect Sample Questions (Q67-Q72):

### NEW QUESTION # 67

KiA B2C Enterprise Customer has the following use case that involves processing payment from an external payment gateway service in Salesforce.

1. Customer requests Customer Service Representative (CSR) for a Service upgrade.
2. Customer provides credit card details to CSR for payment.
3. CSR submits payment information in Salesforce, and processed in a
4. CSR receives confirmation of payment.
5. CSR upgrades service for customer and confirms Customer.

external payment gateway.

This use case requires the CSR to obtain confirmation of payment before upgrading the service.

The integration with Payment gateway needs to be reliable and monitored for audit purposes.

The payment gateway service is an external RESTful service that the B2C Enterprise Customer has subscribed for.

What should an Integration Architect recommend for this integration?

- A. Platform events allow integration to payment gateway through the exchange of real-time event data, platform events are scalable and secure.
- B. Use External Services feature to integrate gateway to Salesforce ensuring real-time updates the CSR and support post payment processes.
- C. Build a custom Apex Callout to external Payment gateway service and provide success message to the CSR, the details of callouts and responses are logged for audit purposes.
- **D. Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes.**

**Answer: D**

Explanation:

Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes. This solution meets the requirements of integrating with an external RESTful service, ensuring real-time updates to the CSR, and supporting post payment processes. ESB stands for Enterprise Service Bus, which is a software architecture model that allows communication between different applications via a common bus. ESB can handle the callout to the payment gateway service, and provide error handling, logging, routing, transformation, and orchestration capabilities. ESB can also integrate with other systems or services that are involved in the post payment processes, such as billing, invoicing, or reporting.

### NEW QUESTION # 68

Northern Trail Outfitters has a requirement to encrypt few of widely used standard fields. They also want to be able to use these fields in workflow rules.

Which security solution should an Integration Architect recommend to fulfill the business use case?

- **A. Platform Shield Encryption**
- B. Data Masking
- C. CryptographyClass
- D. Classic Encryption

**Answer: A**

Explanation:

Option D is correct because Platform Shield Encryption allows you to encrypt standard fields and use them in workflow rules.

Platform Shield Encryption uses AES 256-bit encryption to protect sensitive data at rest, while preserving platform functionality<sup>12</sup>

Option A is incorrect because Cryptography Class is a set of Apex methods for creating digests, message authentication codes, signatures, and encryption. It does not provide a way to encrypt standard fields or use them in workflow rules<sup>3</sup>

Option B is incorrect because Data Masking is a feature that replaces sensitive data in sandboxes with dummy data. It does not encrypt data in production or allow the use of encrypted data in workflow rules<sup>45</sup>

Option C is incorrect because Classic Encryption is a feature that encrypts custom fields with 128-bit AES encryption. It does not support standard fields or workflow rules<sup>67</sup>

Encryption and Shield Platform Encryption? 7: Salesforce Classic vs. Salesforce Shield Platform Encryption: Which One Do You

Need?

### NEW QUESTION # 69

Northern Trail Outfitters has recently experienced intermittent network outages in its call center. When network service resumes, Sales representatives have inadvertently created duplicate orders in the manufacturing system because the order was placed but the return acknowledgement was lost during the outage.

Which solution should an architect recommend to avoid duplicate order booking?

- A. Have scheduled Apex resubmit orders that do not have a successful response.
- **B. Use Outbound Messaging to ensure manufacturing acknowledges receipt of order.**
- C. Use scheduled apex to query manufacturing system for potential duplicate or missing orders.
- D. Implement idempotent design and have Sales Representatives retry order(s) in question.

**Answer: B**

#### NEW QUESTION # 70

Universal Containers is a global financial company that sells financial products and services.

There is a daily scheduled Batch Apex job that generates invoice from a given set of orders.

UC requested building a resilient integration for this batch apex job in case the invoice generation fails.

What should an integration architect recommend to fulfill the requirement?

- **A. Build Batch Retry & Error Handling using BatchApexErrorEvent.**
- B. Build Batch Retry & Error Handling in the middleware.
- C. Build Batch Retry & Error Handling in the Batch Apex Job itself.
- D. Batch Retry & Error Handling report to monitor the error handling.

**Answer: A**

#### NEW QUESTION # 71

An architect decided to use Platform Events for integrating Salesforce with an external system for a company.

Which three things should an architect consider when proposing this type of integration mechanism?

Choose 3 answers

- **A. To publish an event, the integration user in salesforce needs create permission on the event entity.**
- B. Salesforce needs to be able to store information about the external system in order to know which event to send out.
- C. External system needs to have the same uptime in order to be able to keep up with Salesforce Platform Events.
- **D. Error handling must be performed by the remote service because the event is effectively handed off to the remote system for further processing.**
- **E. To subscribe to an event, the integration user in salesforce needs read access to the event entity.**

**Answer: A,D,E**
