

Free PDF C_IBP_2502 - Marvelous Latest SAP Certified Associate - SAP IBP for Supply Chain Practice Questions

P.S. Free & New C_IBP_2502 dumps are available on Google Drive shared by VCE4Plus: https://drive.google.com/open?id=18EGcg5SM1u8FEcqkahzgw36AWBcMu_o8

This is a mutually beneficial learning platform, that's why our C_IBP_2502 study materials put the goals that each user has to achieve on top of us, our loyal hope that users will be able to get the test C_IBP_2502 certification, make them successful, and avoid any type of unnecessary loss and effortless harvesting that belongs to their success. Respect the user's choice, will not impose the user must purchase the C_IBP_2502 Study Materials. We can meet all the requirements of the user as much as possible, to help users better pass the qualifying exams.

SAP C_IBP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Topic 2	<ul style="list-style-type: none">• Solution Architecture & Data Integration: This exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 3	<ul style="list-style-type: none">• General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.

Topic 4	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.
Topic 5	<ul style="list-style-type: none"> • Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.
Topic 6	<ul style="list-style-type: none"> • Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 7	<ul style="list-style-type: none"> • Analytics and Reporting: This section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.
Topic 8	<ul style="list-style-type: none"> • Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.

C_IBP_2502 Exam Cost & Passing C_IBP_2502 Score Feedback

In order to help customers solve problems, our company always insist on putting them first and providing valued service. We deeply believe that our C_IBP_2502 question torrent will help you pass the exam and get your certification successfully in a short time. Maybe you cannot wait to understand our C_IBP_2502 Guide questions; we can promise that our products have a higher quality when compared with other study materials. At the moment you can free download the demo of our C_IBP_2502 guide torrents, and I can make a bet that you will be fond of our C_IBP_2502 exam questions if you understand it.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q56-Q61):

NEW QUESTION # 56

Which Supply Planning processes are part of the tactical planning level within a planning hierarchy? Note: There are 2 correct answers to this question.

- **A. Balancing Supply and Demand**
- B. Stock Replenishment
- C. Order Prioritization
- **D. Inventory Build and Reduction**

Answer: A,D

Explanation:

In SAP IBP, the planning hierarchy includes strategic (long-term), tactical (medium-term), and operational (short-term) levels. Tactical planning (e.g., monthly horizon) focuses on mid-term supply chain decisions.

* Option A: Order Prioritization This is incorrect. Order prioritization is an operational-level process, typically in SAP IBP for Response and Supply, dealing with short-term order allocation, not tactical planning.

* Option B: Stock Replenishment This is incorrect. Stock replenishment is operational, focusing on short-term actions (e.g., daily/weekly restocking), not tactical mid-term planning.

* Option C: Inventory Build and Reduction This is correct. Tactical planning involves decisions like building inventory ahead of demand peaks or reducing excess stock over months, aligning with SAP IBP's Inventory Optimization and S&OP processes at this level.

* Option D: Balancing Supply and Demand This is correct. Balancing supply and demand over a medium-term horizon (e.g., via S&OP or supply heuristics) is a core tactical process in SAP IBP, ensuring resource alignment, per official planning hierarchy definitions.

Thus, C and D are tactical supply planning processes, per SAP IBP's planning framework.

NEW QUESTION # 57

Which planning operators can be executed in a time-series-based planning area? Note: There are 2 correct answers to this question.

- A. Shelf Life Heuristics
- B. Deployment Optimizer
- C. Constrained Forecast Run
- D. Finite Heuristics

Answer: C,D

Explanation:

Time-series-based planning areas in SAP IBP support operators for demand, supply, and inventory planning, distinct from order-based operators.

* Option A: Constrained Forecast Run This is correct. The Constrained Forecast Run adjusts demand forecasts based on supply constraints, a time-series operator in SAP IBP for S&OP, per official documentation.

* Option B: Shelf Life Heuristics This is incorrect. Shelf Life Heuristics is specific to SAP IBP for Response and Supply (order-based), not time-series planning.

* Option C: Finite Heuristics This is correct. Finite Heuristics plans supply respecting capacity constraints in a time-series context, a standard operator, per SAP IBP's supply planning guides.

* Option D: Deployment Optimizer This is incorrect. The Deployment Optimizer is an order-based operator in SAP IBP for Response and Supply, not time-series-based.

Thus, A and C are valid time-series operators, per SAP IBP's official capabilities.

NEW QUESTION # 58

What does ABC/XYZ segmentation allow you to do? Note: There are 2 correct answers to this question.

- A. Substitute missing values in case of sporadic demands
- B. Choose time-independent key figures as segmentation measures
- C. Use forecasting algorithms that are specific to seasonal demands of SKUs in the segment "B"
- D. Identify inventory items that require closer attention

Answer: B,D

Explanation:

ABC/XYZ segmentation in SAP IBP is a demand planning tool to classify products based on value (ABC, e.g., revenue contribution) and demand variability (XYZ, e.g., forecast accuracy). It's used to prioritize planning efforts and optimize inventory.

* Option A: Substitute missing values in case of sporadic demands This is incorrect. ABC/XYZ segmentation classifies products but doesn't inherently substitute missing values. Sporadic demand handling is managed by demand sensing or specific forecast models, not segmentation itself.

* Option B: Choose time-independent key figures as segmentation measures This is correct. In SAP IBP, segmentation measures (e.g., sales value for ABC, coefficient of variation for XYZ) can be time-independent key figures (e.g., total annual revenue, average variability). These are configured in the ABC/XYZ Segmentation app, allowing static or dynamic analysis, as per SAP's demand planning documentation.

* Option C: Identify inventory items that require closer attention This is correct. ABC classifies high-value items (A) versus low-value (C), while XYZ identifies stable (X) versus erratic (Z) demand.

Combining them (e.g., AX = high-value, stable) highlights items needing focus (e.g., AZ = high-value, erratic), aiding inventory and planning prioritization—a core feature of SAP IBP segmentation.

* Option D: Use forecasting algorithms that are specific to seasonal demands of SKUs in the segment "B" This is incorrect. ABC/XYZ segmentation doesn't directly dictate forecasting algorithms or tie them to specific segments like "B" (moderate value). Forecast models (e.g., seasonal ARIMA) are configured separately in demand planning, not as a segmentation output.

Thus, B and C reflect SAP IBP's ABC/XYZ segmentation capabilities per official documentation.

NEW QUESTION # 59

Manage Analytics Stories introduces advanced visualization features within SAP Integrated Business Planning for Supply Chain. What are some of the main capabilities of the stories? Note: There are 3 correct answers to this question.

- A. Specific chart and table filters can be applied within the story
- B. Stories must be re-created in each SAP IBP environment
- C. The story is structured around one responsive page
- D. Links to external URLs can be embedded in the story

Answer: A,B,D

Explanation:

The Manage Analytics Stories app in SAP IBP enables users to create interactive dashboards and visualizations. Its capabilities enhance decision-making by integrating data insights.

* Option A: Links to external URLs can be embedded in the story This is correct. Analytics Stories support embedding hyperlinks to external resources (e.g., documentation, websites), enhancing context, as per SAP IBP's visualization features.

* Option B: The story is structured around one responsive page This is incorrect. Stories can span multiple pages or tabs, not just one, allowing complex layouts. The responsive design adapts to devices, but it's not limited to a single page.

* Option C: Specific chart and table filters can be applied within the story This is correct. Users can apply filters to charts and tables (e.g., by Product, Time) within the story, enabling dynamic data exploration, a core capability in SAP IBP's analytics tools.

* Option D: Stories must be re-created in each SAP IBP environment This is correct. Analytics Stories are environment-specific (e.g., test vs. production) and cannot be transported directly. They must be recreated or exported/imported manually, per SAP IBP's architecture.

Thus, A, C, and D are main capabilities of Manage Analytics Stories, per SAP IBP's official documentation.

(Note: Original answer A, C, D matches corrected analysis.)

NEW QUESTION # 60

What are some of the features of the network charts in SAP Integrated Business Planning for Supply Chain?

Note: There are 2 correct answers to this question.

- A. To display the network chart, you need the Ship-From Location master data type in the planning area
- B. You can create a network chart from the dedicated app, or use the Analytics Advanced app
- C. The network charts visualize relationships between warehouse, plants, customer, and supplier, for finished goods
- D. You can create a network chart from the dedicated app, or use the Manage Analytics Stories app

Answer: B,C

Explanation:

Network charts in SAP IBP (via the Supply Chain Network app) visualize supply chain relationships, a feature of the Control Tower module.

* Option A: To display the network chart, you need the Ship-From Location master data type in the planning area This is incorrect. The Ship-From Location is a concept (e.g., in Transportation Lanes), not a specific master data type requirement. Location and Transportation Lane data suffice.

* Option B: You can create a network chart from the dedicated app, or use the Analytics Advanced app This is correct. The Supply Chain Network app (dedicated) and Analytics Advanced app both support network chart creation, per SAP IBP's visualization documentation.

* Option C: You can create a network chart from the dedicated app, or use the Manage Analytics Stories app This is incorrect. Manage Analytics Stories creates dashboards, not network charts specifically; it's less focused on network visualization.

* Option D: The network charts visualize relationships between warehouse, plants, customer, and supplier, for finished goods This is correct. Network charts depict nodes (e.g., plants, warehouses, customers, suppliers) and edges (e.g., Transportation Lanes) for finished goods, per SAP IBP's network visualization features.

Thus, B and D are accurate features, per SAP IBP's official documentation.

NEW QUESTION # 61

.....

The system of our C_IBP_2502 study materials is great. It is developed and maintained by our company's professional personnel and is dedicated to provide the first-tier service to the clients. Our system updates the C_IBP_2502 study materials periodically and frequently to provide more learning resources and responds to the clients' concerns promptly. Our system will supplement New
