Salesforce PDI Exam consists of 60 multiple-choice questions, and candidates are given 105 minutes to complete the exam. PDI exam covers a range of topics, including data modeling, Apex programming, Visualforce development, and integration with external systems. Passing the exam requires a score of 65% or higher.

Salesforce is one of the leading cloud-based customer relationship management (CRM) systems in the world. Salesforce provides a robust platform for businesses to manage their customer data, sales processes, marketing campaigns, and customer service operations. With a large and active community of developers, Salesforce is constantly evolving and improving its platform to meet the needs of businesses of all sizes and industries. One of the key roles in the Salesforce ecosystem is the Platform Developer I (PDI).

Salesforce Platform Developer I (PDI) Sample Questions (Q177-Q182):

NEW QUESTION # 177

Which three Salesforce resources can be accessed from a Lightning web component?

Choose 3 answers

- A. Static resources
- B. Third-party web components
- C. All external libraries
- D. SVG resources
- E. Content asset files

Answer: A,D,E

Explanation:

Lightning Web Components (LWC) can access various Salesforce resources.

Option B: SVG resources

Accessible.

LWCs can include SVG files to define custom icons for the component.

The SVG file is placed in the component bundle with the name `componentName.svg`.

LWCs can access content asset files using the `@salesforce/contentAssetUrl` import.

This allows components to reference content assets stored in Salesforce.

Example:

```
import myContentAsset from '@salesforce/contentAssetUrl/My_Asset';
```

LWCs can access static resources using the `@salesforce/resourceUrl` import.

Static resources can include JavaScript libraries, images, stylesheets, etc.

Example:

```
import myResource from '@salesforce/resourceUrl/My_Resource';
```

LWCs can use external JavaScript libraries, but there are restrictions.

The library must be included as a static resource and must be compatible with Locker Service.

Not all external libraries can be used due to security restrictions.

LWCs cannot import or use third-party web components due to Locker Service and namespace restrictions.

Components must be within the same namespace to be used.

Conclusion:

The three Salesforce resources that can be accessed from a Lightning web component are:

Option B: SVG resources

Option D: Content asset files

Option E: Static resources

Reference:

Adding an SVG Resource to a Component

Option D: Content asset files

Accessible.

Import Content Assets

Option E: Static resources

Accessible.

Import Static Resources

Options Not Applicable:

Option A: All external libraries

Not All Accessible.
Third-Party Libraries
Option C: Third-party web components
Not Accessible.

NEW QUESTION # 178

Universal Containers wants to automatically assign new cases to the appropriate support representative based on the case origin. They have created a custom field on the Case object to store the support representative name. What is the best solution to assign the case to the appropriate support representative?

- A. Use a validation rule on the Case object.
- B. Use a trigger on the Case object.
- C. Use a formula field on the Case object.
- **D. Use an Assignment Flow element.**

Answer: D

Explanation:

A Flow with an Assignment element is the best declarative solution to assign cases based on criteria such as Case Origin. It can automatically evaluate the value of the Case Origin and assign the support representative.

Why not other options?

A: Using a trigger is a programmatic approach and less ideal when declarative tools can solve the problem.

B: A formula field cannot assign values; it only calculates and displays results.

C: Validation rules are used to enforce constraints, not for assigning values.

Salesforce Flows Overview

NEW QUESTION # 179

On which object can an administrator create a roll-up summary field?

- **A. Any object that is on the master side of a master-detail relationship.**
- B. Any object that is on the detail side of a master-detail relationship.
- C. Any object that is on the parent side of a lookup relationship.
- D. Any object that is on the child side of a lookup relationship.

Answer: A

NEW QUESTION # 180

Which exception type cannot be caught?

- A. custom exception
- B. NoAccessException
- C. CelloutException
- **D. LinkException**

Answer: D

NEW QUESTION # 181

An Apex transaction inserts 100 Account records and 2,000 Contact records before encountering a DML exception when attempting to insert 500 Opportunity records. The Account records are inserted by calling the `database.insert()` method with the `allOrNone` argument set to `false`. The Contact and Opportunity records are inserted using the standalone insert statement. How many total records will be committed to the database in this transaction?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A
