Juniper Junos, Associate (JNCIA-Junos) 認定 JN0-105 試験問題 (Q33-Q38):

質問 # 33

You need to recover the root password on a Junos router without losing the current configuration settings. Which three statements describe what you should perform in this scenario? (Choose three.)

- A. Load the factory-default configuration.
- B. Upgrade the Junos OS to the latest version.
- C. Use a console connection to reboot the device.
- D. Enter and commit the new root password.
- E. Hit the space bar and enter recovery when prompted.

正解: C、D、E

解説:

To recover the root password on a Junos router without losing the configuration, you should (A) enter and commit the new root password once you have gained access to the system, (D) hit the space bar to interrupt the boot process and enter recovery mode when prompted during the boot process, and (E) use a console connection to reboot the device and access the bootloader prompt. These steps allow you to reset the root password while preserving the existing configuration.

質問 # 34

Which command modifier would you use to see all possible completions for a specific command?

- A. |
- B. detail
- C. ?
- D. extensive

正解: C

解説:

In Junos OS, the ? command modifier is used to display all possible completions for a specific command. This helps users understand the available options and syntax for a command they are trying to use.

Reference: Juniper Networks CLI Documentation

"Use the ? command modifier to display all possible completions for a specific command."

質問 # 35

Click the Exhibit button.

Referring the exhibit, what does the highlighted number indicate?

- A. route preference is 5
- B. cost is 5
- C. metric is 5
- D. hop count is 5

正解: A

解説:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

質問 # 36

Which command displays all IPv6 routes in the default routing instance?

- A. show route table inet.1
- B. show route table inet.0
- C. show route table inet6.0
- D. show route table inet6.1

正解: C

解説:

The show route table inet6.0 command displays all IPv6 routes in the default routing instance. In Junos OS, the routing table for IPv6 addresses is referred to as inet6.0, whereas inet.0 is used for IPv4 unicast routes. The other options do not correspond to the correct IPv6 routing table.

Reference:

Juniper official documentation: Junos OS Routing Tables Overview.

質問 # 37

Which statement is correct concerning exception traffic processing?

- A. Exception traffic is always dropped during congestion.
- B. Exception traffic is never forwarded.
- C. Exception traffic is rate-limited to protect the RE.
- D. Exception traffic is discarded by the PFE.

正解: C

解説:

Exception traffic refers to packets that the Packet Forwarding Engine (PFE) cannot process normally and must be forwarded to the Routing Engine (RE) for further processing. This includes packets destined for the router itself or packets needing special handling that the PFE cannot provide. To protect the RE from being overwhelmed by such traffic, which could potentially impact the router's control plane functions, exception traffic is rate-limited. This means that there's a threshold to how much exception traffic can be sent to the RE, ensuring that the router's critical management and control functions remain stable and responsive even during high traffic volumes or attacks.

質問 # 38
