Free PDF Quiz 350-701 - Reliable Implementing and Operating Cisco Security Core Technologies Valid Test Test

This kind of prep method is effective when preparing for the Cisco 350-701 certification exam since the cert demands polished skills and an inside-out understanding of the syllabus. These skills can be achieved when you go through intensive Cisco 350-701 Exam Training and attempt actual Cisco 350-701.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q403-Q408):

NEW QUESTION # 403

An engineer is adding a Cisco router to an existing environment. NTP authentication is configured on all devices in the environment with the command `ntp authentication-key 1 md5 Cisc427128380`. There are two routers on the network that are configured as NTP servers for redundancy, 192.168.1.110 and 192.168.1.111.

192.168.1.110 is configured as the authoritative time source. What command must be configured on the new router to use 192.168.1.110 as its primary time source without the new router attempting to offer time to existing devices?

- A. `ntp peer 192.168.1.110 prefer key 1`
- B. `ntp server 192.168.1.110 primary key 1`
- C. `ntp server 192.168.1.110 key 1 prefer`
- D. `ntp peer 192.168.1.110 key 1 primary`

Answer: C

Explanation:

The correct command to configure the new router to use 192.168.1.110 as its primary time source without the new router attempting to offer time to existing devices is `ntp server 192.168.1.110 key 1 prefer`. This command specifies that the new router will act as an NTP client and synchronize its time with the NTP server at 192.168.1.110, using the authentication key 1 and giving preference to this server over other possible servers. The `prefer` keyword indicates that this server is preferred over other servers with the same stratum number. The `ntp server` command is different from the `ntp peer` command, which configures the new router to act as an NTP peer and exchange time information with another NTP device. A peer relationship is bidirectional and symmetric, meaning that both devices can provide and receive time information from each other. A client-server relationship is unidirectional and asymmetric, meaning that the client only receives time information from the server and does not provide any time information to the server. Therefore, the `ntp peer` command is not suitable for the scenario, as it would make the new router attempt to offer time to existing devices, which is not desired. The `primary` keyword is not a valid option for either the `ntp server` or the `ntp peer` command, and it would cause a syntax error. References :=

NEW QUESTION # 404

A Cisco Firepower administrator needs to configure a rule to allow a new application that has never been seen on the network. Which two actions should be selected to allow the traffic to pass without inspection? (Choose two)

- A. reset
- B. monitor
- C. permit
- D. trust
- E. allow

Answer: B,D

Explanation:

Explanation

Explanation

Each rule also has an action, which determines whether you monitor, trust, block, or allow matching traffic.

Note: With action "trust", Firepower does not do any more inspection on the traffic. There will be no intrusion protection and also no file-policy on this traffic.

NEW QUESTION # 405

Which two capabilities does TAXII support? (Choose two.)

- A. pull messaging
- B. mitigating
- C. correlation
- D. binding
- E. exchange

Answer: A,D

NEW QUESTION # 406

Which statement about IOS zone-based firewalls is true?

- A. An interface can be assigned to multiple zones.
- B. Only one interface can be assigned to a zone.
- C. An interface can be assigned only to one zone.
- D. An unassigned interface can communicate with assigned interfaces

Answer: C

NEW QUESTION # 407

A network administrator configures Dynamic ARP Inspection on a switch. After Dynamic ARP Inspection is applied, all users on that switch are unable to communicate with any destination. The network administrator checks the Interface status of all interfaces, and there is no err-disabled interface. What is causing this problem?

- A. DHCP snooping has not been enabled on all VLANs
- B. The ip arp inspection limit command is applied on all interfaces and is blocking the traffic of all users
- C. Dynamic ARP inspection has not been enabled on all VLANs
- D. The no ip arp inspection trust command is applied on all user host interfaces

Answer: D
