## 350-901 최신버전dumps: Developing Applications using Cisco Core Platforms and APIs (DEVCOR) & 350-901 응시덤프자료

Pass4Test의 Cisco 350-901덤프로Cisco 350-901시험준비를 하면 시험패스는 간단한 일이라는걸 알게 될것입니다. Cisco 350-901덤프는 최근Cisco 350-901시험의 기출문제모음으로 되어있기에 적응율이 높습니다.시험에서 떨어지면 덤프비용 전액 환불해드리기에 우려없이 덤프를 주문하셔도 됩니다.

# 최신 Cisco Certified DevNet Professional 350-901 무료샘플문제 (Q402-Q407):

## 질문 # 402

Refer to the exhibit.

Drag and drop the steps from the left into the correct order of operation on the right for a successful OAuth2 three-legged authorization code grant flow.

Client initiates the flow.	step 1
The authorization server authenticates the client, validates details sent, and responds with an access token.	step 2
The authorization server redirects the user-agent back to the client using the redirection URI provided.	step 3
The authorization server authenticates the resource owner.	step 4
The client requests an access token from the authorization server's token endpoint.	step 5

정답:

설명:

Client initiates the flow.	Client initiates the flow.
The authorization server authenticates the client, validates details sent, and responds with an access token.	The authorization server redirects the user-agent back to the client using the redirection URI provided.
The authorization server redirects the user-agent back to the client using the redirection URI provided.	The authorization server authenticates the resource owner.
The authorization server authenticates the resource owner.	The client requests an access token from the authorization server's token endpoint.
The client requests an access token from the authorization server's token endpoint.	The authorization server authenticates the client, validates details sent, and responds with an access token.

Client initiates the flow.
The authorization server redirects the user-agent back to the client using the redirection URI provided.
The authorization server authenticates the resource owner.
The client requests an access token from the authorization server's token endpoint.
The authorization server authenticates the client, validates details sent, and responds with an access token.

**질문 # 403**

What is a characteristic of a monolithic architecture?

- A. New capabilities are deployed by restarting a component of the application.
- **B. A service failure can bring down the whole application.**
- C. The components are platform-agnostic.
- D. It is an application with multiple independent parts.

**정답: B**

**설명:**

A monolithic app can be platform-agnostic but it's not mandatory. But if the app is monolithic, a service failure (such as storage or network) will bring down the whole app/service. This is unlike the distributed application architecture where failure of one microcomponent can be detected and fixed dynamically.

**질문 # 404**

A heterogeneous network of vendors and device types needs automating for better efficiency and to enable future automated testing. The network consists of switches, routers, firewalls and load balancers from different vendors, however they all support the NETCONF/RESTCONF configuration standards and the YAML models with every feature the business requires. The business is looking for a buy versus build solution because they cannot dedicate engineering resources, and they need configuration diff and rollback functionality from day 1.

Which configuration management for automation tooling is needed for this solution?

- **A. Ansible and NSO**
- B. Terraform
- C. NSO
- D. Ansible and Terraform
- E. Ansible

**정답: A**

**설명:**

[https://www.cisco.com/c/dam/m/en\\_us/network-intelligence/service-provider/digital-transformation/knowledge-network-webinars/pdfs/1012-0aa-ckn.pdf](https://www.cisco.com/c/dam/m/en_us/network-intelligence/service-provider/digital-transformation/knowledge-network-webinars/pdfs/1012-0aa-ckn.pdf)

**질문 # 405**

An engineer is developing a web-based application that will be used as a central repository for the HR department. The application needs to authenticate user access and encrypt communication. Drag and drop the steps from the left into the order on the right to install an application-specific SSL certificate.

The diagram shows a drag-and-drop interface for installing an SSL certificate. On the left, there are four light blue boxes containing the following steps in order from top to bottom:

- Configure the application to use HTTPS.
- Create a certificate signing request.
- Acquire the SSL certificate.
- Install the SSL certificate.

On the right, there are four yellow boxes labeled 'step 1', 'step 2', 'step 3', and 'step 4' from top to bottom. A Cisco logo is visible in the background.

**정답:**

**설명:**

질문 # 406  
DRAG DROP

```
#!/usr/bin/python3
import requests, sys

head = { 'Content-Type': '<item 1>',
        'Authorization': 'Bearer NWU4NjQ0ODJkZTI1M. .4-ad72cae0e10f' }

res = requests.post(url = 'https://api.ciscopark.com/v1/<item 2>',
                    headers = head, json = { '<item 3>': sys.argv[1] })
spaceId = res.json()['id']

members = [ 'johndoe@example.com', 'janedoe@example.com' ]
for member in members:
    res = requests.post(url='https://api.ciscopark.com/v1/<item 4>',
                        headers = head,
                        json = { 'roomId': spaceId, '<item 5>': member})
```

Refer to the exhibit above and click on the resource tabs in the top left corner to view resources to help with this question.

## Create a Room

Creates a room. The authenticated user is automatically added as a member of the room. See the [Memberships API](#) to learn how to add more people to the room.

To create a 1:1 room, use the [Create Messages](#) endpoint to send a message directly to another person by using the `toPersonId` or `toPersonEmail` parameters.

**POST** /v1/rooms

### Body Parameters

**title**

string **Required**

A user-friendly name for the room.

**teamId**

string

The ID for the team with which this room is associated.

## Create a Membership

Add someone to a room by Person ID or email address; optionally making them a moderator.

**POST** /v1/memberships

### Body Parameters

**roomId**

string **Required**

The room ID.

**personId**

string

The person ID.

**personEmail**

string

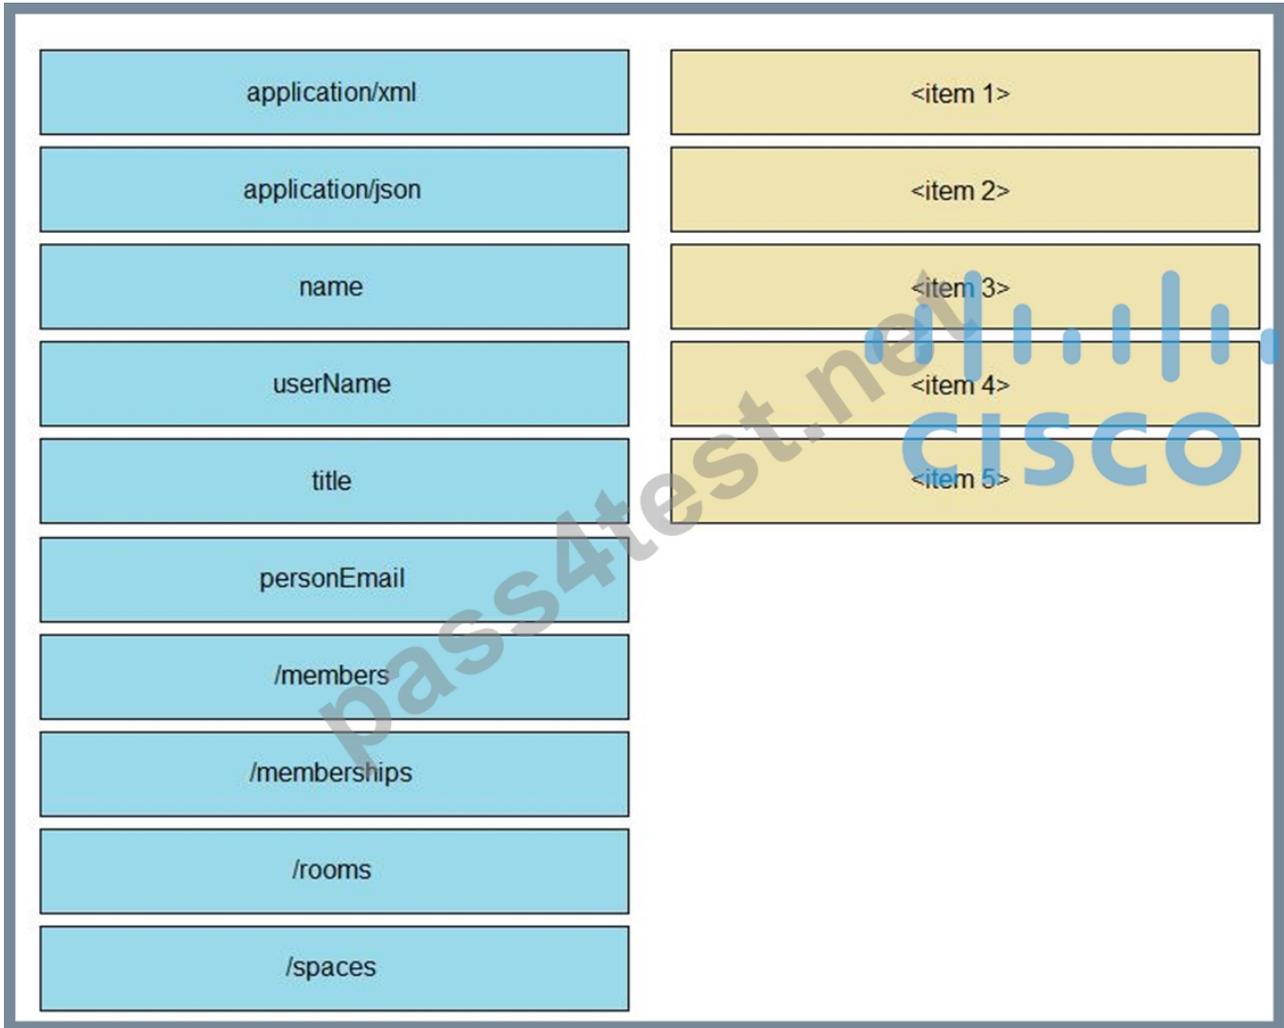

The email address of the person.

**isModerator**

boolean

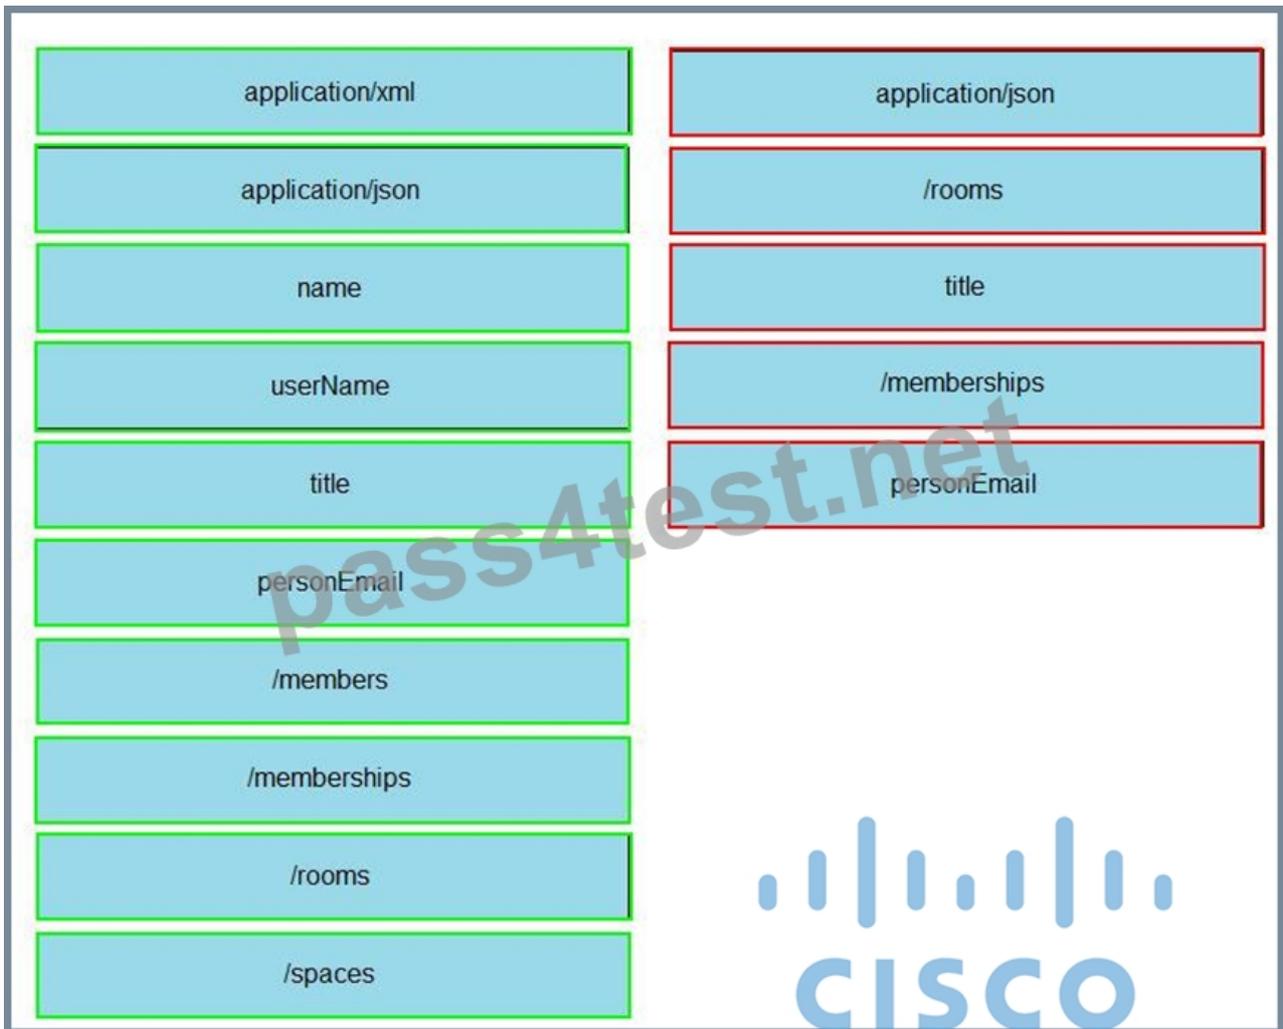

Whether or not the participant is a room moderator.

A developer is creating a Python Script that will use the Webex Teams REST API to automatically create a new collaboration space with him and his team leads on-demand via a Linux terminal command. Drag and drop the code snippets from the left onto the numbers on the right that match the missing sections in the exhibit to complete the script. Not all code snippets are used.

정답:
