

# Gives 100% Guarantee Of Success Via Microsoft DP-420 Exam Questions

**Certification Provider:** Microsoft  
**Exam Code:** DP-420  
**Exam Name:** Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB  
**Total Questions:** 248 Questions and Answers  
**Updated on:** Jan 20, 2022  
**Product Format:** PDF & Test Engine Software Version  
**Support:** 24x7 Customer Support on Live Chat and Email  
**Valid For:** Worldwide - In All Countries  
**Discount:** Available for Bulk Purchases and Extra Licenses  
**Payment Options:** Paypal, Credit Card, Debit Card  
**Delivery:** PDF/Test Engine are Instantly Available for Download  
**Guarantee:** 100% Exam Passing Assurance with Money back Guarantee.  
**Updates:** 90 Days Free Updates Service

As is known to us, the quality is an essential standard for a lot of people consuming movements, and the high quality of the DP-420 study materials is always reflected in the efficiency. We are glad to tell you that the DP-420 study materials from our company have a high quality and efficiency. If you decide to choose our study materials as your first study tool, it will be very possible for you to pass the DP-420 Exam successfully, and then you will get the related certification in a short time.

You can find features of this Microsoft DP-420 prep material below. All smart devices are suitable to use Microsoft DP-420 pdf dumps of VCEPrep. Therefore, you can open this Microsoft DP-420 real dumps document and study for the Microsoft DP-420 test at any time from your comfort zone. These DP-420 Dumps are updated, and VCEPrep regularly amends the content as per new changes in the DP-420 real certification test.

## **DP-420 Exam Bootcamp: Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB & DP-420 Original Questions & DP-420 Exam Prep**

Beyond knowing the answer, and actually understanding the DP-420 test questions puts you one step ahead of the test. Completely understanding a concept and reasoning behind how something works, makes your task second nature. Your DP-420 quiz will melt in your hands if you know the logic behind the concepts. Any legitimate DP-420 prep materials should enforce this style of learning - but you will be hard pressed to find more than a DP-420 practice test anywhere other than VCEPrep.

## **Microsoft Designing and Implementing Cloud-Native Applications Using Microsoft Azure Cosmos DB Sample Questions (Q117-Q122):**

### **NEW QUESTION # 117**

You are building an application that will store data in an Azure Cosmos DB for NoSQL account. The account uses the session default consistency level. The account is used by five other applications. The account has a single read-write region and 10 additional read regions.

Approximately 20 percent of the items stored in the account are updated hourly.

Several users will access the new application from multiple devices.

You need to ensure that the users see the same item values consistently when they browse from the different devices. The solution must not affect the other applications.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Provide a stored session token when performing read requests.

- B. Set the default consistency level to eventual.
- C. Associate a session token to the device.
- D. Use implicit session management when performing read requests.
- E. **Associate a session token to the user account.**

**Answer: A,E**

### NEW QUESTION # 118

You have an Azure Cosmos DB Core (SQL) API account.

You run the following query against a container in the account.

SELECT

```
IS_NUMBER("1234") AS A,
IS_NUMBER(1234) AS B,
IS_NUMBER({prop: 1234}) AS C
```

What is the output of the query?

- A. [{"A": true, "B": false, "C": true}]
- B. **[{"A": false, "B": true, "C": false}]**
- C. [{"A": true, "B": true, "C": false}]
- D. [{"A": true, "B": true, "C": true}]

**Answer: B**

Explanation:

IS\_NUMBER returns a Boolean value indicating if the type of the specified expression is a number.  
"1234" is a string, not a number.

### NEW QUESTION # 119

You need to provide a solution for the Azure Functions notifications following updates to con-product. The solution must meet the business requirements and the product catalog requirements.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. **Configure the trigger for each function to use the same leaseCollectionName.**
- B. **Configure the trigger for each function to use a different leaseCollectionPrefix**
- C. Configure the trigger for each function to use the same leaseCollectionPrefix
- D. Configure the trigger for each function to use a different leaseCollectionName

**Answer: A,B**

Explanation:

Explanation

leaseCollectionPrefix: when set, the value is added as a prefix to the leases created in the Lease collection for this Function. Using a prefix allows two separate Azure Functions to share the same Lease collection by using different prefixes.

Scenario: Use Azure Functions to send notifications about product updates to different recipients.

Trigger the execution of two Azure functions following every update to any document in the con-product container.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-functions/functions-bindings-cosmosdb-v2-trigger>

### NEW QUESTION # 120

You have an Azure Cosmos DB for NoSQL account named account that has the disablekeyBasedletadatwriteAccess property enabled.

You are developing an app named App1 that will be used by a user named DevUser1 to create containers in account1. DevUser1 has a non-privileged user account in the Azure AD tenant.

You need to ensure that DevUser1 can use App1 to create containers in account1.

What should you do? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

□

**Answer:**

Explanation:

**NEW QUESTION # 121**

You need to identify which connectivity mode to use when implementing App2. The solution must support the planned changes and meet the business requirements.

Which connectivity mode should you identify?

- A. Direct mode over HTTPS
- **B. Direct mode over TCP**
- C. Gateway mode (using HTTPS)

**Answer: B**

Explanation:

Scenario: Develop an app named App2 that will run from the retail stores and query the data in account2.

App2 must be limited to a single DNS endpoint when accessing account2.

By using Azure Private Link, you can connect to an Azure Cosmos account via a private endpoint. The private endpoint is a set of private IP addresses in a subnet within your virtual network.

When you're using Private Link with an Azure Cosmos account through a direct mode connection, you can use only the TCP protocol. The HTTP protocol is not currently supported.

Reference:

<https://docs.microsoft.com/en-us/azure/cosmos-db/how-to-configure-private-endpoints>

Topic 1, Litware, inc

Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Litware, Inc. is a United States-based grocery retailer. Litware has a main office and a primary datacenter in Seattle. The company has 50 retail stores across the United States and an emerging online presence. Each store connects directly to the internet.

Existing environment. Cloud and Data Service Environments.

Litware has an Azure subscription that contains the resources shown in the following table.

Each container in productdb is configured for manual throughput.

The con-product container stores the company's product catalog data. Each document in con-product includes a con-productvendor value. Most queries targeting the data in con-product are in the following format.

SELECT \* FROM con-product p WHERE p.con-productVendor - 'name'

Most queries targeting the data in the con-productVendor container are in the following format SELECT \* FROM con-productVendor pv ORDER BY pv.creditRating, pv.yearFounded Existing environment. Current Problems.

Litware identifies the following issues:

Updates to product categories in the con-productVendor container do not propagate automatically to documents in the con-product container.

Application updates in con-product frequently cause HTTP status code 429 "Too many requests". You discover that the 429 status code relates to excessive request unit (RU) consumption during the updates.

Requirements. Planned Changes

Litware plans to implement a new Azure Cosmos DB Core (SQL) API account named account2 that will contain a database named iotdb. The iotdb database will contain two containers named con-iot1 and con-iot2.

Litware plans to make the following changes:

Store the telemetry data in account2.

Configure account1 to support multiple read-write regions.

Implement referential integrity for the con-product container.

Use Azure Functions to send notifications about product updates to different recipients.

Develop an app named App1 that will run from all locations and query the data in account1.

Develop an app named App2 that will run from the retail stores and query the data in account2. App2 must be limited to a single DNS endpoint when accessing account2.

Requirements. Business Requirements

Litware identifies the following business requirements:

Whenever there are multiple solutions for a requirement, select the solution that provides the best performance, as long as there are no additional costs associated.

Ensure that Azure Cosmos DB costs for IoT-related processing are predictable.

Minimize the number of firewall changes in the retail stores.

Requirements. Product Catalog Requirements

Litware identifies the following requirements for the product catalog:

Implement a custom conflict resolution policy for the product catalog data.

Minimize the frequency of errors during updates of the con-product container.

Once multi-region writes are configured, maximize the performance of App1 queries against the data in account1.

Trigger the execution of two Azure functions following every update to any document in the con-product container.

## NEW QUESTION # 122

.....

To assimilate those useful knowledge better, many customers eager to have some kinds of DP-420 practice materials worth practicing. All content is clear and easily understood in our DP-420 practice materials. They are accessible with reasonable prices and various versions for your option. All content are in compliance with regulations of the DP-420 Exam. As long as you are determined to succeed, our DP-420 study guide will be your best reliance.
