最新的 AWS Certified Developer AWS-Developer 免費考試真題 (Q337-Q342):

問題 #337

An application is being developed to audit several AWS accounts. The application will run in Account A and must access AWS services in Accounts B and C.

What is the MOST secure way to allow the application to call AWS services in each audited account?

- A. Deploy an application in each audited account with its own role. Have Account A authenticate with the application
- B. Use S3 cross-region replication to communicate among accounts, with Amazon S3 event notifications to trigger Lambda functions
- C. Configure cross-account roles in each audited account. Write code in Account A that assumes those roles
- **D. Create an IAM user with an access key in each audited account. Write code in Account A that uses those access keys**

答案: D

問題 #338

AWS Elastic Load Balancer supports SSL termination.

- A. False
- B. True. For specific availability zones only.
- **C. True. For all regions**
- D. True. For specific regions only

答案: C

解題說明:

You can configure your load balancer in ELB (Elastic Load Balancing) to use a SSL certificate in order to improve your system security. The load balancer uses the certificate to terminate and then decrypt requests before sending them to the back-end instances. Elastic Load Balancing uses AWS Identity and Access Management (IAM) to upload your certificate to your load balancer.

問題 #339

A company launched an online portal to announce a new product that the company will release in 6 months.

The portal requests that users enter an email address to receive communications about the product. The company needs to create a REST API that will store the email addresses in Amazon DynamoDB.

A developer has created an AWS Lambda function that can store the email addresses. The developer will deploy the Lambda function by using the AWS Serverless Application Model (AWS SAM). The developer must provide access to the Lambda function over HTTP.

Which solutions will meet these requirements with the LEAST additional configuration? (Select TWO.)

- A. Expose the Lambda function by using a Network Load Balancer.
- **B. Expose the Lambda function by using Amazon API Gateway.**
- C. Expose the Lambda function by using AWS Global Accelerator
- D. Expose the Lambda function by using a Gateway Load Balancer.
- **E. Expose the Lambda function by using function URLs.**

答案: B,E

問題 #340

You attempt to store an object in the US-STANDARD region in Amazon S3, and receive a confirmation that it has been successfully stored. You then immediately make another API call and attempt to read this object. S3 tells you that the object does not exist. What could explain this behavior?

- A. You exceeded the bucket object limit, and once this limit is raised the object will be visible.
- B. Objects in Amazon S3 do not become visible until they are replicated to a second region.
- **C. US-STANDARD uses eventual consistency and it can take time for an object to be readable in a bucket**
- D. US-STANDARD imposes a 1 second delay before new objects are readable.

答案: C

問題 #341

An e-commerce site allows returning users to log in to display customized web pages. The workflow is shown in the image below:

An application is running on EC2 instances. Amazon RDS is used for the database that stores user accounts and preferences. The website freezes or is slow to load while waiting for the login step to complete. The remaining components of the site are well-optimized.

Which of the following techniques will resolve this issue? (Select Two.)

- A. Use Amazon Application Load Balancer to load balance the traffic to the website.
- B. Implement the user login page as an asynchronous Lambda function.
- C. Use Amazon ElastiCache for MemCached to cache user data.
- D. Batch login requests from hundreds of users together as a single read request to the database.
- E. Call the database asynchronously so the code can continue executing.

答案：C,E
