MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q19-Q24):

NEW QUESTION # 19
Damages must be accounted for

- A. before a delivery vehicle is released
- B. after the driver has left the facility
- C. after adding to inventory
- D. before final inspection

Answer: A

Explanation:
CLT receiving controls call for identifying and documenting damages at the dock, before accepting the load and releasing the carrier. This ensures that responsibility is clear, carrier paperwork reflects exceptions, and claims can be initiated with proper evidence (photos, notes, seal status). Posting damaged items to inventory first compromises accuracy and complicates claims; waiting until after driver departure removes a key witness and may violate carrier requirements for noting exceptions at delivery. The correct sequence is: verify against documents, inspect for condition/quantity, record exceptions, and only then proceed to acceptance/vehicle release. This process protects financial recovery and maintains clean inventory records.

NEW QUESTION # 20

A characteristic typical of an effective inventory management system is

- A. maintaining an inventory level that fills storage space to capacity
- B. a sufficient quantity of goods is kept on hand and reordering is performed when necessary
- C. holding only enough inventory to fill half of the demand
- D. an excessively small inventory level to minimize costs

Answer: B

Explanation:
Effective systems balance service level and cost. They maintain enough stock to meet demand through lead time (with safety stock where appropriate) and trigger timely reorders using methods like reorder points, EOQ, or min/max. Extremes-chronic under-stocking (stockouts) or over-stocking (excess carrying cost, obsolescence)-are specifically cautioned against in CLT guidance.

NEW QUESTION # 21

Which agency is responsible for import/export regulation enforcement?

- A. U.S. Department of Transportation (USDOT)
- B. Globally Harmonized System (GHS)
- C. S. Customs and Border Protection (CBP) enforces all import and export regulations within U.S. ports of entry. CLT 4.0 emphasizes that CBP ensures compliance with customs laws, tariff assessments, trade embargoes, and security programs. While USDOT oversees transport safety and CTPAT is a voluntary security initiative under CBP, the CBP itself holds enforcement authority. It inspects cargo, verifies documentation, collects duties, and ensures compliance with U.S. trade laws and international agreements. For logistics technicians, understanding CBP procedures-including entry filings, tariff classifications, and inspection processes-is critical to maintaining the legal movement of goods across borders. CBP's oversight protects domestic markets and supports national security by preventing smuggling, counterfeit goods, and noncompliant imports.
- D. Customs Trade Partnership Against Terrorism (CTPAT)
- E. U.S. Customs and Border Protection (USCBP)

Answer: E

NEW QUESTION # 22

Documentation is an important part of shipping operations. Which of the following documents includes the pick ticket so items can be checked off as they are packaged?

- A. Bill of Lading
- B. Dispatch List
- C. Shipping Manifest
- D. Shipping Order

Answer: D

Explanation:
The Shipping Order consolidates customer order details, picking lists, and packaging instructions to verify that all items are included in a shipment. According to CLT 4.0, this document supports the packaging stage by allowing workers to cross-check items against

the pick ticket, ensuring order completeness and accuracy. It is often generated by the Warehouse Management System (WMS) and accompanies the shipment until final documentation (manifest and bill of lading) is produced. Using the shipping order improves packing accuracy, prevents shortages, and maintains customer satisfaction. While manifests and bills of lading summarize loads for transportation, the shipping order is used internally for packaging and verification before final loading.

NEW QUESTION # 23

Which of the following is the common name for wood containers used to provide a structure that enables material handlers to grasp and move items while providing a degree of protection at the same time?

- A. crates
- B. wire mesh containers
- C. drums
- D. pallets

Answer: D

Explanation:
The pallet is the most widely used base platform in logistics, described in the CLT "Product Storage" module as a load-handling unit that provides both structure and protection for materials during handling, storage, and transport. Typically made of wood (though plastic and metal versions exist), pallets allow forklifts and pallet jacks to easily lift and move unitized loads. Their standardized dimensions (such as the 48x40-inch GMA pallet) ensure compatibility with racking systems and automated equipment. Unlike crates, pallets are open-structured, facilitating efficient storage and airflow. The CLT curriculum emphasizes the use of pallets to improve safety, reduce handling time, and protect goods from damage through secure strapping or stretch-wrapping. Proper palletization reduces manual lifting, streamlines workflow, and maintains load stability-critical for warehouse efficiency and safety compliance.
