## 最新的 Adobe Experience Manager AD0-E137 免費考試真題 (Q38-Q43):

### 問題 #38

Which action is typically performed by a replication agent in AEM?

- **A. Transferring content and digital assets from the author instance to the publish instance.**
- B. Synchronizing user permissions between the author and publish instances.
- C. Transferring Core components for use in AEM Sites.

答案: A

### 問題 #39

A developer created a component with the following fields:

Name	Type	Value	Purpose
pagePath	pathfield	/content/testsite/en/page1	Display page path
additionalInfo	textfield	/product/test1	Display as suffix
label	textfield	Test page1 title	Display as link title

What is the correct HTL code and resultant valid URL path generated?

A)

HTL code:

```
<a href="{properties.pagePath}.html/{properties.additionalInfo}">{properties.label}</a> Page Path:  
/content/testsite/en/page1.html/product/test1
```

B)

HTL code:

```
<a href="{properties.pagePath}/{properties.additionalInfo}.html">{properties.label}</a> Page Path:  
/content/testsite/en/page1/product/test1.html
```

C)

HTL code:

```
<a href="{properties.additionalInfo}.html/{properties.pagePath}">{properties.label}</a> Page Path:  
/product/test1.html/content/testsite/en/page1
```

- **A. Option B**
- B. Option C
- C. Option A

答案: A

### 問題 #40

A developer needs to customize the handling of assets in a complex workflow model where different paths process assets based on their metadata and trigger specific external services.

Which approach is a best practice for implementing this solution?

- **A. Write custom workflow process steps in Java to handle specific metadata conditions and integrate external services, using the Workflow API to manage dynamic branching logic.**
- B. Use out-of-the-box Adobe Experience Manager Workflow steps and configure them through the Workflow console to handle all metadata for asset processing, using conditions in the Workflow.
- C. Implement a content fragment model to pre-define asset metadata, using Workflows only for publishing the fragments after external service calls are completed.

答案: A

#### 問題 #41

A developer is tasked with designing a solution to accommodate multiple client projects within a single Adobe Experience Manager (AEM) instance, each requiring its own set of unique resources, code, and content.

Given the need for true multi-tenancy, where each tenant operates independently with zero knowledge of other tenants and no shared code, content, or common authors, which approach should the developer recommend?

- A. Encourage the use of component groups and allowedPaths properties to logically separate tenant-specific components and templates within the same AEM instance.
- B. Utilize AEM's out-of-the-box multi-tenancy capabilities to segregate tenants within the same author and publish instances, relying on access control lists (ACLs) and content path organization to ensure separation.
- C. Implement separate author and publish instances for each tenant, ensuring complete isolation of resources, code, and content, thereby achieving true multi-tenancy.

答案： C

#### 問題 #42

A developer wants to deliver personalized content on a webpage.

Which rule should be applied in the dispatcher configuration to ensure cache efficiency?

- A. Block caching for all .html pages to ensure that every page load is served directly from the AEM publish instance.
- B. Cache .html files but configure dispatcher to invalidate the cache when URL parameters (query strings) are present.
- C. Enable caching for all POST requests to improve performance on forms and other dynamic interactions that modify content.

答案： B
