

Exam SOA-C02 Cram Questions | Valid SOA-C02 Test Cram

The graphic features the 'ACHIEVE' logo on the top left and 'ACS' on the top right. In the center, there is a silhouette of a head with a question mark inside, next to the text 'QUIZ QUESTION DAY THE OF DAY'. Below this, a speech bubble contains the question: '500ml 0.05 M Na₂CO₃ দ্রবণে কত গ্রাম Na₂CO₃ থাকে?'. Underneath the speech bubble, a button-like shape contains the text: 'সঠিক উত্তর খাতায় করে কमेंটে ছবি দাও।'. At the bottom, it says 'ACHIEVE HSC-26 FRB Offline Model Test batch running...' and includes a QR code labeled 'Routine'.

Pass Guaranteed 2026 Perfect Amazon Exam SOA-C02 Cram Questions

Many candidates do not have actual combat experience, for the qualification examination is the first time to attend, they always feel aimless and worried about the SOA-C02 exam very much. But we can help all of these candidates on SOA-C02 study questions. Numerous grateful feedbacks from our loyal customers proved that we are the most popular vendor in this field to offer our SOA-C02 preparation questions. You can totally rely on us.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q181-Q186):

NEW QUESTION # 181

An application uses an Amazon Aurora MySQL DB cluster that includes one Aurora Replica. The application's read performance degrades when there are more than 200 user connections. The number of user connections is approximately 180 on a consistent

basis. Occasionally, the number of user connections increases rapidly to more than 200.

A SysOps administrator must implement a solution that will scale the application automatically as user demand increases or decreases.

Which solution will meet these requirements?

- **A. Create an auto scaling policy that has a target value of 195 for the DatabaseConnections metric.**
- B. Modify the DB cluster by increasing the Aurora Replica instance size.
- C. Migrate to a new Aurora DB cluster that has multiple writer instances. Modify the application's database connection string.
- D. Modify the DB cluster by changing to serverless mode whenever the number of user connections exceeds 200.

Answer: A

NEW QUESTION # 182

A company needs to view a list of security groups that are open to the internet on port 3389.

What should a SysOps administrator do to meet this requirement?

- A. Configure Amazon GuardDuty to scan security groups and report unrestricted access on port 3389.
- **B. Use AWS Trusted Advisor to find security groups that allow unrestricted access on port 3389.**
- C. Use AWS Identity and Access Management Access Analyzer to find any instances that have unrestricted access on port 3389.
- D. Configure a service control policy (SCP) to identify security groups that allow unrestricted access on port 3389

Answer: B

Explanation:

To find security groups that are open to the internet on port 3389, using AWS Trusted Advisor is the most straightforward solution.

* AWS Trusted Advisor:

* AWS Trusted Advisor provides real-time guidance to help you provision your resources following AWS best practices.

* It includes a security check that identifies security groups with unrestricted access.

* Steps to Use Trusted Advisor:

* Open the AWS Trusted Advisor console.

* In the "Security" category, look for the check that identifies security groups with unrestricted access.

* Review the report to find security groups that allow unrestricted access on port 3389 (RDP).

NEW QUESTION # 183

A SysOps administrator creates an Amazon Elastic Kubernetes Service (Amazon EKS) cluster that uses AWS Fargate. The cluster is deployed successfully. The SysOps administrator needs to manage the cluster by using the kubectl command line tool. Which of the following must be configured on the SysOps administrator's machine so that kubectl can communicate with the cluster API server?

- **A. The kubeconfig file**
- B. The eks-connector.yaml file
- C. The kube-proxy Amazon EKS add-on
- D. The Fargate profile

Answer: A

Explanation:

<https://aws.amazon.com/premiumsupport/knowledge-center/eks-api-server-endpoint-failed/>

NEW QUESTION # 184

A recent organizational audit uncovered an existing Amazon RDS database that is not currently configured for high availability. Given the critical nature of this database, it must be configured for high availability as soon as possible.

How can this requirement be met?

- A. Switch to an active/passive database pair using the create-db-instance-read-replica with the --availability-zone flag.

- B. Specify high availability when creating a new RDS instance, and live-migrate the data.
- C. Use the modify-db-instance command with the --na flag.
- D. Modify the RDS instance using the console to include the Multi-AZ option.

Answer: D

NEW QUESTION # 185

The security team is concerned because the number of AWS Identity and Access Management (IAM) policies being used in the environment is increasing. The team tasked a SysOps administrator to report on the current number of IAM policies in use and the total available IAM policies.

Which AWS service should the administrator use to check how current IAM policy usage compares to current service limits?

- A. AWS Trusted Advisor
- B. AWS Config
- C. Amazon Inspector
- D. AWS Organizations

Answer: A

Explanation:

Step-by-Step Explanation:

* Understand the Problem:

* The security team is concerned about the increasing number of IAM policies.

* The task is to report on the current number of IAM policies and compare them to the service limits.

* Analyze the Requirements:

* The solution should help in checking the usage of IAM policies against the service limits.

* Evaluate the Options:

* Option A: AWS Trusted Advisor

* AWS Trusted Advisor provides real-time guidance to help you provision your resources following AWS best practices.

* It includes a service limits check that alerts you when you are approaching the limits of your AWS service usage, including IAM policies.

* Option B: Amazon Inspector

* Amazon Inspector is an automated security assessment service that helps improve the security and compliance of applications deployed on AWS. It does not report on IAM policy usage.

* Option C: AWS Config

* AWS Config is a service that enables you to assess, audit, and evaluate the configurations of your AWS resources. While useful for compliance, it does not provide a comparison against service limits.

* Option D: AWS Organizations

* AWS Organizations helps you centrally manage and govern your environment as you grow and scale your AWS resources. It does not provide insights into IAM policy limits.

* Select the Best Solution:

* Option A: AWS Trusted Advisor is the correct answer because it includes a service limits check that can report on the current number of IAM policies in use and compare them to the service limits.

References:

* AWS Trusted Advisor Documentation

* IAM Service Limits

AWS Trusted Advisor is the appropriate tool for monitoring IAM policy usage and comparing it against service limits, providing the necessary insights to manage and optimize IAM policies effectively.

NEW QUESTION # 186

.....

In order to meet the time requirement of our customers, our experts carefully designed our SOA-C02 test torrent to help customers pass the exam in a lot less time. If you purchase our SOA-C02 guide torrent, we can make sure that you just need to spend twenty to thirty hours on preparing for your exam before you take the exam, it will be very easy for you to save your time and energy. So do not hesitate and buy our SOA-C02 study torrent, we believe it will give you a surprise, and it will not be a dream for you to pass your AWS Certified SysOps Administrator - Associate (SOA-C02) exam and get your certification in the shortest time.
