Mule-Dev-301 Latest Exam Pattern - Interactive Mule-Dev-301 Practice Exam

Our Salesforce Certified MuleSoft Developer II study question has high quality. So there is all effective and central practice for you to prepare for your test. With our professional ability, we can accord to the necessary testing points to edit Mule-Dev-301 exam questions. It points to the exam heart to solve your difficulty. So high quality materials can help you to pass your exam effectively, make you feel easy, to achieve your goal. With the Mule-Dev-301 Test Guide use feedback, it has 98%-100% pass rate. That's the truth from our customers. And it is easy to use for you only with 20 hours' to 30 hours' practice. After using the Mule-Dev-301 test guide, you will have the almost 100% assurance to take part in an examination. With high quality materials and practices, you will get easier to pass the exam.

Salesforce Certified MuleSoft Developer II Sample Questions (Q59-Q64):

NEW QUESTION # 59
When a client and server are exchanging messages during the mTLS handshake, what is being agreed on during the cipher suite exchange?

- A. The TLS version
- B. A protocol
- C. An encryption algorithm
- D. The Public key format

Answer: C

Explanation:
A cipher suite is a set of cryptographic algorithms that are used to secure the communication between a client and a server. A cipher

suite consists of four components: a key exchange algorithm, an authentication algorithm, an encryption algorithm, and a message authentication code (MAC) algorithm. During the cipher suite exchange, the client and the server agree on which encryption algorithm to use for encrypting and decrypting the data. Reference: https://docs.mulesoft.com/mule-runtime/4.3/tls-configuration#cipher-suites

NEW QUESTION # 60
A Mule application for processing orders must log the order ID for every log message output.
What is a best practice to enrich every log message with the order ID?

- A. Use flow variables within every logger processor to log the order ID
- B. Use the Tracing module to set logging variables with a Mapped Diagnostic Context
- C. Create a custom XML SDK component to wrap the logger processor and automatically add the order ID within the connector
- D. Set a flow variable and edit the log4/2.xml file to output the variable as part of the message pattern

Answer: B

Explanation:
To enrich every log message with the order ID, the developer should use the Tracing module to set logging variables with a Mapped Diagnostic Context (MDC). The Tracing module allows adding custom key-value pairs to log messages using MDC variables. The developer can use Set Logging Variables operation to set the order ID as an MDC variable and then use it in any logger processor within the same thread or event. Reference: https://docs.mulesoft.com/tracing-module/1.0/tracing-module-reference#set-logging-variables

NEW QUESTION # 61
An organization uses CloudHub to deploy all of its applications.
How can a common-global-handler flow be configured so that it can be reused across all of the organization's deployed applications?

- A. Create a Mule plugin project
  Create a common-global-error-handler flow inside the plugin project.
  Use this plugin as a dependency in all Mute applications.
  Import that configuration file in Mute applications.
- B. Create a Mule Plugin project
- C. Create a common-global-error-handler flow in all Mule Applications Refer to it flow-ref wherever needed.

Answer: B

Explanation:
Create a common-global-error-handler flow inside the plugin project.
Use this plugin as a dependency in all Mule applications
D.
Create a Mule daman project.
Create a common-global-error-handler flow inside the domain project.
Use this domain project as a dependency.
Explanation:
To configure a common-global-handler flow that can be reused across all of the organization's deployed applications, the developer should create a Mule Plugin project, create a common-global-error-handler flow inside the plugin project, and use this plugin as a dependency in all Mule applications. This way, the developer can import the common-global-error-handler flow in any application that needs it and avoid duplicating the error handling logic. Reference: https://docs.mulesoft.com/mule-runtime/4.3/error-handling#global-error-handler

NEW QUESTION # 62
Refer to the exhibit.
What is the result of the Mule Maven Plugin configuration of the value of property its,keystorePassoword in CloudHub 2.0?

- A. The Mule server encrypts the value

- B. Runtime Manager masks the value
- C. Anypoint Studio secures the value
- D. CloudHub encrypts the value

Answer: B

Explanation:
The result of the Mule Maven Plugin configuration of the value of property its,keystorePassword in CloudHub 2.0 is that Runtime Manager masks the value. This means that Runtime Manager hides or obscures the value from anyone who views it in Runtime Manager or Anypoint Platform. Reference: https://docs.mulesoft.com/runtime-manager/runtime-manager-agent-for-mule4#properties-tab

NEW QUESTION # 63
A company deploys 10 public APIs to CloudHub. Each API has its individual health endpoint defined. The platform operation team wants to configure API Functional Monitoring to monitor the health of the APIs periodically while minimizing operational overhead and cost.
How should API Functional Monitoring be configured?

- A. From 10 public locations with each API in its own schedule
- B. From one public location with all 10 APIs in a single schedule
- C. From one private location with all 10 APIs in a single schedule
- D. From one public location with each API in its own schedule

Answer: B

Explanation:
To configure API Functional Monitoring to monitor the health of 10 public APIs periodically while minimizing operational overhead and cost, the developer should use one public location with all 10 APIs in a single schedule. A public location is a worker that runs in a CloudHub shared environment, which is cheaper and easier to maintain than a private location. A single schedule allows running all 10 APIs tests at the same time and frequency, which reduces complexity and resource consumption. Reference: https://docs.mulesoft.com/functional-monitoring/fm-create-monitor#create-a-monitor

NEW QUESTION # 64
......

There is no need to worry about virus on buying electronic products. For TorrentVCE have created an absolutely safe environment and our exam question are free of virus attack. We make endless efforts to assess and evaluate our Mule-Dev-301 exam question' reliability for a long time and put forward a guaranteed purchasing scheme. If there is any doubt about it, professional personnel will handle this at first time, and you can also have their remotely online guidance to install and use our Mule-Dev-301 Test Torrent.
