It is known to us that the 21st century is an information era of rapid development. Now the people who have the opportunity to gain the newest information, who can top win profit maximization. In a similar way, people who want to pass LEED-Green-Associate exam also need to have a good command of the newest information about the coming exam. However, it is not easy for a lot of people to learn more about the information about the study materials. Luckily, the LEED-Green-Associate Study Materials from our company will help all people to have a good command of the newest information.

## USGBC LEED Green Associate Exam Sample Questions (Q65-Q70):

### NEW QUESTION # 65

Which of the following facilitates the recharging of aquifers?

- A. Impervious paving
- B. Asphalt road
- C. Concrete parking lot
- D. **Pervious paving**

**Answer: D**

Explanation:

Pervious paving, also known as permeable paving, allows water to pass through it, facilitating the recharging of aquifers. This type of paving reduces runoff by allowing water to soak into the ground, which can help replenish groundwater supplies and reduce the impact on nearby water bodies. Reference: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

### NEW QUESTION # 66

Who completes and signs the credit templates for a project pursuing LEED certification?

- A. The Commissioning (Cx) agent
- B. **The specified team member**
- C. The local authorities having jurisdiction
- D. The certified LEED Reviewer

**Answer: B**

Explanation:

The credit templates are the online forms that document the achievement of the LEED credits for a project pursuing LEED certification. The credit templates are completed and signed by the specified team member who is responsible for the credit, such as the architect, engineer, contractor, or owner. The teammember must provide the required information, calculations, narratives, and supporting documentation for each credit<sup>13</sup>. References: LEED v4 Green Associate Candidate Handbook<sup>1</sup>, LEED v4 BD+C Reference Guide<sup>3</sup>

### NEW QUESTION # 67

Light colored paving and cool roofs are terms referring to materials with

- A. lower emissivity and lower albedo
- B. lower emissivity and higher albedo
- C. **higher emissivity and higher albedo**
- D. higher emissivity and lower albedo

**Answer: C**

Explanation:

Explanation

Light-colored paving and cool roofs refer to materials with higher emissivity and higher albedo. Emissivity is the ability of a material to emit heat that it absorbs, while albedo is a measure of how much light that hits a surface is reflected without being absorbed. Materials with high emissivity can help reduce heat islands by releasing more of the heat they absorb, while those with high albedo can reflect more sunlight and thus stay cooler. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

### NEW QUESTION # 68

Which of the following third-party verification strategy contributes to environmentally preferable products?

- A. ASHRAE 90.1
- B. Green Buying Council
- C. **Forest Stewardship Council**

- D. California's Title 24

**Answer: C**

Explanation:

The Forest Stewardship Council (FSC) is a third-party verification organization that certifies forest products that are sourced from responsibly managed forests that meet environmental, social, and economic standards<sup>12</sup>. FSC-certified wood products are considered environmentally preferable products under the LEED v4 Materials and Resources category, as they reduce the negative impacts of deforestation, habitat loss, and biodiversity loss<sup>34</sup>.

What is FSC? | FSC International<sup>1</sup>

**NEW QUESTION # 69**

Which of the following strategies is considered an approach to land management that mimics natural systems and manages rainwater as close to the source as possible?

- A. Xeriscaping
- B. Evapotranspiration
- **C. Low-Impact Development**
- D. Passive Design

**Answer: C**

Explanation:

Explanation

Low-Impact Development (LID) is an approach to land development that uses various land planning and design practices and technologies to simultaneously conserve and protect natural resource systems and reduce infrastructure costs. LID still allows land to be developed, but in a cost-effective manner that helps mitigate potential environmental impacts. This approach aims to manage rainwater as close to its source as possible, mimicking a site's pre-development hydrology through the use of numerous site design strategies. References:
