Cisco DevNet Associate Exam Sample Questions (Q459-Q464):

NEW QUESTION # 459

What is the function of IP address in networking?

- **A. represents the unique ID that is assigned to one host on a network**
- B. represents a network connection on specific devices
- C. specifies the type of traffic that is allowed to roam on a network
- D. specifies resource's location and the mechanism to retrieve it

Answer: A

Explanation:

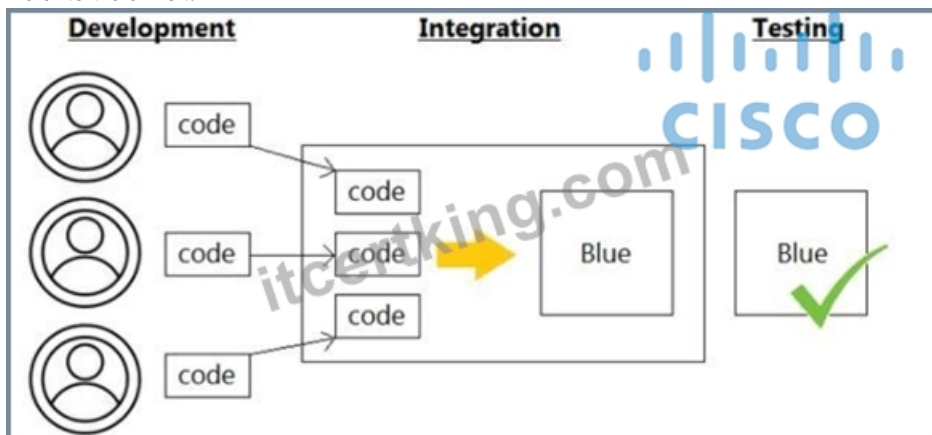

An IP (Internet Protocol) address is a unique identifier assigned to each device connected to a network that uses the IP for communication. It serves two main functions: identifying the host or network interface and providing the location of the host in the network. This unique ID allows devices to locate and communicate with each other over an IP-based network, ensuring that data sent across the network reaches the correct destination.

```
import requests
import json

controller = 'devnetapi.cisco.com/sandbox/dnacenter'
url = "https://" + controller + "/dna/system/api/v1/auth/token"
payload = { 'username': 'devnetuser', 'password': 'password' }
header = { 'Content-type': 'application/json' }

response = requests.post(url, data=json.dumps(payload), \
headers=header, verify=False)

r_json = response.json()
print(r_json)

ticket = r_json["Token"]
print(ticket)
```

NEW QUESTION # 462

A developer completed the creation of a script using Git. Before delivering it to the customer, the developer wants to be sure about all untracked files, without losing any information. Which command gathers this information?

- A. `git rm *`
- B. `git clean -n`
- C. `git clean -r`
- D. `git rm -f`

Answer: B

Explanation:

The `-n` option will perform a "dry run" of `git clean`. This will show you which files are going to be removed without actually removing them. It is a best practice to always first perform a dry run of `git clean`.
