DOWNLOAD the newest Prep4King Plat-Con-201 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1EQG6J4WCJgkYHEpOEShLiUTzO8Ms3aUE>

As you can see from the demos that on our website that our Plat-Con-201 practice engine have been carefully written, each topic is the essence of the content. Only should you spend about 20 - 30 hours to study Plat-Con-201 preparation materials carefully can you take the exam. The rest of time you can go to solve all kinds of things in life, ensuring that you don't delay both study and work. Our Plat-Con-201 Exam Brindumps will save your time, money and efforts to success.

We have dedicated staff to update all the content of Plat-Con-201 exam questions every day. So you don't need to worry about that you buy the materials so early that you can't learn the last updated content. And even if you failed to pass the exam for the first time, as long as you decide to continue to use Salesforce Certified Omnistudio Consultant torrent prep, we will also provide you with the benefits of free updates within one year and a half discount more than one year. Plat-Con-201 Test Guide use a very easy-to-understand language. So even if you are a newcomer, you don't need to worry that you can't understand the contents. Industry experts hired by Plat-Con-201 exam questions also explain all of the difficult professional vocabulary through examples, forms, etc. You can completely study alone without the help of others.

## Exam Plat-Con-201 Dumps, Latest Plat-Con-201 Test Preparation

The valid updated, and real Salesforce Plat-Con-201 PDF questions and both practice test software are ready to download. Just take the best decision of your professional career and get registered in the Salesforce Plat-Con-201 Certification Exam and start this

## Salesforce Certified Omnistudio Consultant Sample Questions (Q38-Q43):

### NEW QUESTION # 38

A customer needs to create an OmniScript to capture payment information. In the first step of the process, the user selects a payment type such as credit card, debit card, or direct bank account payment. Each payment type should display with a different icon. The process should check to see if the customer has any saved payment information of that type, and if there is, no further action is required. If there is no saved payment information then the user should be allowed to enter the information, and the process should save it.

Which three OmniScript elements should be used to meet these requirements?

Choose 3 answers

- A. DataRaptor Extract Action
- **B. Radio**
- **C. Select**
- D. DataRaptor Transform Action
- **E. DataRaptor Post Action**

**Answer: B,C,E**

Explanation:

The three OmniScript elements that should be used to meet these requirements are: Select, DataRaptor Extract Action, and DataRaptor Post Action. A Select element can display a dropdown list of options for the user to choose from, such as payment type. A DataRaptor Extract Action can retrieve data from a Salesforce object, such as saved payment information, and store it in an Interface object or a JSON object. A DataRaptor Post Action can write data to a Salesforce object, such as new payment information, and perform insert or update operations.

### NEW QUESTION # 39

A company has an OmniScript that allows agents to schedule service calls. The first step displays the account name, primary contact name, and telephone number to the user for confirmation. On the second step, it displays available appointment slots, which are retrieved from an external service in XML and then transformed into JSON. The following actions are currently used in the OmniScript:

- \* DataRaptor Extract Action
- \* HTTP Action
- \* DataRaptor Transform Action

Following best practices, what can the consultant recommend to reduce processing time?

- **A. Combine these actions into an Integration Procedure**
- B. Add reusable OmniScripts for each step
- C. Change DataRaptors to extract single objects
- D. Add conditional views to the OmniScript

**Answer: A**

Explanation:

The consultant should recommend adding a Set Errors element to meet this requirement. A Set Errors element can display an error message and prevent the OmniScript from proceeding if certain conditions are not met. The consultant can use a Set Errors element to check if the email address field is empty when the agent selects the checkbox to email the receipt. If it is empty, the Set Errors element can show an error message and direct the user to return to the first step and enter the customer's email address.

### NEW QUESTION # 40

Topic: Salesforce API

You want to display Chatter feeds, users, groups, and followers, especially in mobile applications.

Also, you want to provide programmatic access to files, recommendations, topics, notifications, and Data.com purchasing. Which of the following options should you use to do this?

- A. Streaming API
- **B. Chatter REST API**

- C. Tooling API
- D. Chatter SOAP API
- E. REST API

**Answer: B**

Explanation:

The requirement involves displaying Chatter-related data (feeds, users, groups, followers) in mobile applications and providing programmatic access to additional features like files, recommendations, topics, notifications, and Data.com purchasing. The Chatter REST API is the most suitable Salesforce API for this purpose, making D the correct answer.

Here's why D. Chatter REST API is the correct answer:

\* Chatter REST API Overview: The Chatter REST API is a specialized subset of the Salesforce REST API, optimized for social collaboration features. It provides access to Chatter-specific functionality (e.

g., feeds, posts, comments, groups, users, followers) and extends to related features like files (Chatter Files), recommendations, topics, notifications, and even Data.com purchasing integrations.

\* Meeting the Requirements:

\* Chatter Feeds, Users, Groups, Followers: The Chatter REST API offers endpoints like /chatter

/feeds, /chatter/users, /chatter/groups, and /chatter/users/{id}/followers to retrieve and display this data in a mobile app.

\* Files: Use /chatter/files or /connect/files endpoints to access and manage Chatter Files.

\* Recommendations: Access Chatter recommendations via /connect/recommendations.

\* Topics: Manage topics with /connect/topics.

\* Notifications: Handle notifications via /connect/notifications.

\* Data.com Purchasing: The API supports Data.com-related calls (e.g., purchasing contact data) through specific endpoints like /connect/datacom.

\* Mobile Optimization: The REST-based architecture of the Chatter REST API is lightweight, uses JSON (or XML), and is ideal for mobile applications due to its stateless, HTTP-based design, aligning with the requirement's emphasis on mobile use.

\* Programmatic Access: It provides full CRUD (create, read, update, delete) capabilities for Chatter data and related features, meeting the need for programmatic control.

Now, let's examine why the other options are incorrect:

\* A. Streaming API: The Streaming API is for real-time push notifications (e.g., subscribing to record updates via PushTopics or Platform Events). It's not designed for retrieving Chatter feeds, files, or Data.com data, nor is it suited for general mobile display purposes—it's event-driven, not data-access- focused.

\* B. REST API: The broader Salesforce REST API (e.g., /services/data/vXX.X/) can access some Chatter data (e.g., via sObjects like FeedItem), files, and notifications, but it's not specialized for Chatter or Data.com purchasing. The Chatter REST API is a tailored extension of this, offering more specific endpoints and better usability for Chatter-related tasks, making it the better fit.

\* C. Tooling API: The Tooling API is for managing metadata and developer tools (e.g., Apex classes, triggers), not for accessing Chatter data, files, or Data.com features. It's irrelevant to this requirement.

\* E. Chatter SOAP API: There's no "Chatter SOAP API" in Salesforce—SOAP API exists for general sObject operations, but Chatter-specific features are handled via REST (Chatter REST API). SOAP is less mobile-friendly due to its XML-heavy, stateful nature, making this option incorrect and outdated.

References:

\* Salesforce Chatter REST API Developer Guide: Overview - Lists supported features like feeds, files, topics, and Data.com integration.

\* Salesforce REST API Developer Guide: Chatter Resources - Details Chatter-specific endpoints in the REST framework.

## NEW QUESTION # 41

Which OmniStudio tool is optimized for performance and minimizes configuration time?

- A. DataRaptor Extract
- B. Integration Procedure
- C. DataRaptor Turbo Extract
- D. Calculation Procedure

**Answer: C**

Explanation:

The OmniStudio tool that is optimized for performance and minimizes configuration time is DataRaptor Turbo Extract. A DataRaptor Turbo Extract is a tool that can retrieve data from one or more Salesforce objects using a graphical interface, without writing any SOQL queries. A DataRaptor Turbo Extract can also use filters, joins, and formulas to manipulate the data. A DataRaptor Turbo Extract is faster and more efficient than a DataRaptor Extract, and can handle large amounts of data without hitting governor limits.

## NEW QUESTION # 42

A consultant is tasked with migrating Calculation Matrices and Procedures as Decision Matrices and Expression Sets respectively. What is a key consideration when migrating Calculation Matrices and Procedures?

- A. Looping procedures cannot be migrated as expression sets.
- B. Matrices can be migrated without considerations.
- C. Procedures can be migrated without considerations.
- D. Matrices can be migrated with minimal considerations.

**Answer: A**

Explanation:

The task involves migrating legacy Calculation Matrices to Decision Matrices and Calculation Procedures to Expression Sets in OmniStudio. A key consideration arises from the differences in functionality between these tools, particularly with looping logic, making D the correct answer.

Here's why D. Looping procedures cannot be migrated as Expression Sets is the correct answer:

\* Migration Context:

\* Calculation Matrices # Decision Matrices: Calculation Matrices (from older Vlocity tools) are lookup tables that map inputs to outputs. They migrate to Decision Matrices in OmniStudio, which serve the same purpose (e.g., returning a discount based on inputs) and are generally straightforward to convert, as both are data-driven tables stored as Salesforce metadata.

\* Calculation Procedures # Expression Sets: Calculation Procedures are sequential, logic-driven processes that can include formulas, conditions, and loops. They migrate to Expression Sets in OmniStudio, which are collections of reusable expressions (formulas or conditions) executed in a specific order.

\* Key Consideration - Looping:

\* Calculation Procedures: These legacy procedures support looping logic, such as iterating over a list of items (e.g., processing multiple line items in a quote to calculate totals).

\* Expression Sets: Expression Sets in OmniStudio are designed for linear, non-iterative calculations. They execute a series of expressions (e.g., Total = Price \* Quantity) but do not natively support looping constructs like "for each" or "while" loops. Looping requires an Integration Procedure or custom Apex in OmniStudio, not Expression Sets.

\* Impact: If a Calculation Procedure includes looping (e.g., summing values across a JSON array), it cannot be directly migrated to an Expression Set without rearchitecting the logic. The consultant must consider alternative tools (e.g., an Integration Procedure with a Loop Block) to handle such cases.

\* Why It's Key: Failing to account for looping can break the migrated process, as Expression Sets lack this capability. Identifying and addressing looping logic upfront is critical to ensure functional equivalence post-migration.

Now, let's examine why the other options are incorrect:

\* A. Procedures can be migrated without considerations: This is false. Calculation Procedures often include complex logic (e.g., loops, branching), and Expression Sets have limitations (e.g., no looping), requiring careful analysis and potential redesign during migration.

\* B. Matrices can be migrated with minimal considerations: While migrating Calculation Matrices to Decision Matrices is relatively straightforward (both are lookup tables), "minimal considerations" understates potential issues like data mapping or deprecated features, though looping isn't a factor here.

This isn't the key consideration compared to D.

\* C. Matrices can be migrated without considerations: This is incorrect. Even for matrices, considerations like field mappings, data type compatibility, or version differences exist, though they're less complex than procedure migrations.

References:

\* Salesforce OmniStudio Documentation: Migration Guide - Discusses migrating Calculation Matrices and Procedures, noting limitations like looping in Expression Sets.

\* Salesforce OmniStudio Developer Guide: Expression Sets - Confirms Expression Sets lack looping, unlike Integration Procedures.

## NEW QUESTION # 43

.....

Under the hatchet of fast-paced development, we must always be cognizant of social long term goals and the direction of the development of science and technology. Adapt to the network society, otherwise, we will take the risk of being obsoleted. Our Plat-Con-201 Test Torrent keep a look out for new ways to help you approach challenges and succeed in passing the Salesforce Certified Omnistudio Consultant exam. An ancient Chinese proverb states that "The journey of a thousand miles starts with a single step". To be recognized as the leading international exam bank in the world through our excellent performance, our Salesforce Certified Omnistudio Consultant qualification test are being concentrated on for a long time and have accumulated mass resources
