(Q31-Q36):

NEW QUESTION # 31

A cloud administrator has been receiving reports of slow response times from users accessing their organization's web application, which is protected by FortiWeb Cloud.

Which two steps can be taken to potentially alleviate the problem? (Choose two.)

- A. Deploying FortiWeb Cloud in the same region where the web application is hosted.
- B. Changing the DNS records to point to the web application.
- C. Adding additional passthrough load balancers.
- D. Enabling the content delivery network (CDN).

Answer: A,D

Explanation:
Deploying FortiWeb Cloud closer to the web application reduces latency and improves response times.
Enabling CDN caches content closer to users, reducing load times and speeding up content delivery.

NEW QUESTION # 32

Refer to the exhibit.
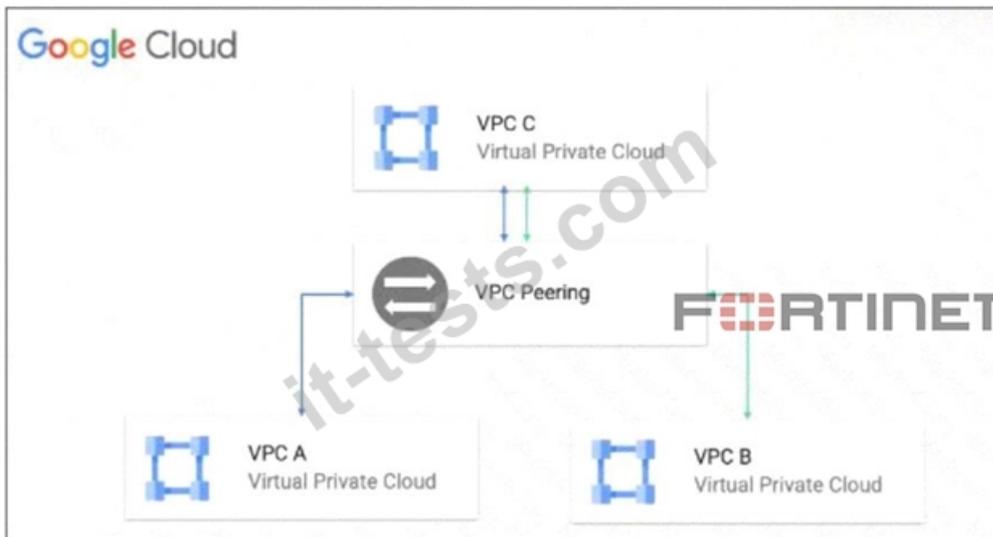

Which action must the administrator take to route traffic from VPC B to VPC A?

- A. The administrative must configure a custom route in VPC B and point the gateway to VPC A.

- C. The administrator must create a new VPC peering connection between VPC A and VPC B.
- D. The administrator must deploy a FortiGate VM with at least three network interfaces.

Answer: D

Explanation:
Because VPC peering is non-transitive, traffic cannot route from VPC B to VPC A via VPC C. To enable routing between VPC A and VPC B through VPC C, a FortiGate VM with multiple network interfaces can act as a firewall/router to manage traffic between the three VPCs.

NEW QUESTION # 33

Your organization is running an application in their shared services virtual public cloud (VPC) and must control network access natively in the cloud.

- B. Create a firewall rule that allows access to the application instance only.

- C. Create another VPC in front of the shared services VPC and deploy FortiGate.
