Lastly, the Discovery Implementation section focuses on the implementation of discovery, including best practices, change management, and the rollout of discovery to the organization.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q46-Q51):

NEW QUESTION # 46

Which choices best describe what is necessary to create a custom horizontal pattern to discover an operating system that is not discovered by the base installation patterns? (Choose two.)

- A. Select a CI Type
- B. Select Application Pattern Type
- C. Select Infrastructure Pattern Type
- D. Define Process Strategy

Answer: B,C

Explanation:

According to the ServiceNow website¹, the key capabilities of a ServiceNow ITOM Enterprise solution are:

- * Manage hybrid clouds: Gain visibility and control across your hybrid cloud environment with a single system of action for IT.
- * Proactively eliminate service outages: Identify issues and anomalies before they cause service outages with AIOps and machine learning.
- * Automate IT service operations: Automate common service requests, processes, and tasks with digital workflows and virtual agents.
- * Optimize IT service delivery: Align your IT resources and investments with business priorities and optimize service delivery performance.

NEW QUESTION # 47

Can we have different capabilities configured for MidServers in a load balanced Cluster.

Response:

- A. No
- B. Yes

Answer: A

NEW QUESTION # 48

In a discovery pattern, which types are available with CI Attributes in the Pattern Designer? (Choose two.)

- A. Related CI types
- B. Main pattern CI type
- C. All CI types
- D. Global CI types

Answer: A,B

Explanation:

In a discovery pattern, CI Attributes are the fields that store the information about the configuration items (CIs) that are discovered by the pattern. The Pattern Designer is a graphical interface that allows users to create and edit patterns using drag-and-drop operations. In the Pattern Designer, there are two types of CI Attributes that are available: Main pattern CI type and Related CI types. The Main pattern CI type is the CI type that the pattern is designed to discover, such as Windows Server, Linux Server, or Database. The Related CI types are the CI types that are related to the main CI type, such as IP Address, Network Adapter, or Software Installation. Users can select the CI Attributes from these types to populate the CMDB tables with the data collected by the pattern¹²³.

NEW QUESTION # 49

In order to use Debug from the Pattern Designer, you must have what?

- A. a discoverable CI
- B. Service Mapping installed
- C. a proxy server
- D. the admin role

Answer: D

Explanation:

Debug mode is a feature of the Pattern Designer that allows you to test and troubleshoot your patterns in real time. To activate Debug mode, you need to have the admin role or a role that includes the pattern_designer_debug permission. Debug mode is not available for users who only have the pattern_designer_read permission¹.

NEW QUESTION # 50

Operation	Merge Table		
* First Table	\$name_details		
* Second Table	\$more_process_info		
* Target Table	\$cmdb_ci_web_server		
Merge Criteria	Condition		
Meet	Any	Following condition	
	\$process.executablePath	Contains	"mongoose"
Unmatched Values	Remove		

Based on this image, which of the following statements are true? (Choose three.)

- A. For this operation to run, there must be some data in the process.executablePath variable.
- B. Attributes from two tables populate a table with the same name as a ServiceNow CMDB table.
- C. This operation is more than likely a part of a step on a pattern set to Application Pattern Type.
- D. If a value is unmatched, it is still merged into the Target Table.
- E. This is a horizontal pattern of type "infrastructure."

Answer: A,B,C

Explanation:

* A is true because the target table \$cmdb_ci_web_server is a ServiceNow CMDB table that stores information about web servers.

* B is true because the merge table operation is typically used for application patterns, which are horizontal patterns that discover applications and their dependencies. The condition on the process.

executablePath variable suggests that the operation is looking for a specific application (mongoose) running on the web servers.

* D is true because the merge table operation requires at least one matching field value between the two source tables. In this case, the process.executablePath variable is the matching field, and it must contain "mongoose" for the operation to run.
