問題 #25

Which of the following are dimensions of the clean core concept?
(3 correct answers)

- A. Applications
- B. Operations
- C. Integrations
- D. Processes
- E. Configurations

答案：C,D,E

解題說明：

The clean core concept is fundamental to SAP's cloud strategy and governs how organizations should structure their ERP systems to remain flexible, upgradeable, and stable. One key dimension is Configurations

, which must follow SAP-recommended patterns and avoid unnecessary customizations that compromise upgradeability. Configurations define how the system behaves, and keeping them standardized ensures that the core can remain clean. A second dimension is Integrations. Clean core principles emphasize using SAP-approved integration patterns, APIs, and event-driven models rather than modifying the underlying system. By handling extensions and integrations through platforms like SAP Business Technology Platform, organizations avoid invasive changes that would otherwise jeopardize upgrades or system stability. A third dimension is Processes, referring to the ability to adopt SAP's standard end-to-end processes wherever possible. Aligning with SAP best practices minimizes the need for enhancements in the core system and ensures compatibility with future innovations. Applications and operations are not part of the formal clean core dimensions; rather, they are broader parts of the overall IT landscape. The clean core dimensions focus specifically on system configuration, integration behavior, and business process alignment—ensuring that SAP systems remain cloud-ready and agile.

問題 #26

Which method is primarily used to assess process performance and identify improvement opportunities in SAP Signavio?

- A. Tag-Based Filtering
- B. Interface Mapping
- C. Lifecycle Modeling
- **D. KPI and Scoring**

答案： D

問題 #27

Which approach combines the Greenfield and Brownfield strategies?

- A. Side-by-Side Migration
- B. Cloud-Native Apps
- **C. Selective Data Transition**
- D. Hybrid Cloud

答案： C

解題說明：

Selective Data Transition (SDT) is a specialized approach that blends elements of both Greenfield (new implementation) and Brownfield (system conversion) strategies. This hybrid methodology allows organizations to selectively migrate configuration settings, historical data, and business processes from their existing systems into a new SAP S/4HANA environment. Unlike a pure Greenfield approach, which requires starting completely fresh, SDT preserves valuable components of the legacy system. At the same time, it avoids the full conversion requirements of a Brownfield approach, offering greater flexibility for reengineering processes and adopting SAP best practices.

SDT is especially useful for companies with multiple ERP systems or those undergoing large-scale consolidation. It enables harmonization of processes, data cleansing activities, and the adoption of standardized templates while still leveraging existing investment where beneficial.

The other options do not combine the two approaches. Cloud-native apps refer to development style; side-by-side migration describes extension patterns; hybrid cloud refers to infrastructure strategy. Selective Data Transition is the only transformation methodology that formally merges the strengths of both Greenfield and Brownfield.

問題 #28

What is the function of WalkMe in the toolchain?

- **A. Providing user guidance and enablement**
- B. Supporting interface testing
- C. Supporting test automation
- D. Automating data backup

答案： A

解題說明：

WalkMe is an end-user enablement tool integrated into SAP transformation programs to ensure smooth adoption and reduce user learning challenges. It provides interactive guidance, on-screen instructions, and automated walkthroughs directly within the SAP

application interface. This allows users to follow step-by-step workflows while performing tasks in real time, significantly improving their ability to adapt to new processes and system changes introduced during transformation.

During deployments, WalkMe accelerates onboarding by reducing training time and minimizing errors. It also supports change management by ensuring that process updates or new functionalities are clearly communicated. Instead of relying on static documentation, users receive dynamic, context-aware guidance.

WalkMe does not perform test automation (A) or interface testing (B), which are functions handled by other tools such as Tricentis. It also does not manage data backups (C). Its purpose within the RISE with SAP and Activate methodologies is to provide in-application guidance, digital adoption support, and user empowerment, ensuring that business users can navigate redesigned processes confidently and efficiently.

問題 #29

What benefit does SAP LeanIX Insights provide to stakeholders?

- A. Cost allocation mapping
- B. Lifecycle tag duration tracking
- C. Enhanced survey management
- D. Visibility into current and target architecture alignment

答案: D

解題說明:

SAP LeanIX Insights summarizes architectural information to help stakeholders compare the current IT landscape with the planned future architecture. This includes visualizing application portfolios, evaluating capability support, and identifying technical or functional gaps. Insights offer clarity on the transformation roadmap, ensuring that business capabilities and IT strategy remain aligned. While LeanIX supports other reporting functions, its primary value in transformation programs is enabling clear visibility between "as-is" and "to-be" architecture.
