Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18
During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.
Which characteristics of a design-first approach will help make this API successful?

- A. Publishing the fully implemented API to Exchange so all developers can reuse the API
- B. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- C. Adding global policies to the API so all developers automatically secure the implementation before coding anything
- D. Developing a specification so consumers can test before the implementation is built

Answer: D

Explanation:

A design-first approach emphasizes creating the API specification before implementation, ensuring better alignment with consumer needs and reducing the risk of project failure. Here's a detailed explanation:
* API Specification:
* Definition: An API specification is a detailed, formal description of the API's endpoints, request
/response formats, and protocols.
* Consumer Testing: Allows API consumers (developers) to understand, test, and provide feedback on the API design before actual development begins.
* Advantages:
* Early Feedback: Consumers can test the API design using mock services or tools like API Designer and provide feedback, ensuring the API meets their requirements.
* Reduced Rework: Identifies potential issues and design flaws early, reducing costly changes during the implementation phase.
* Documentation: Provides comprehensive documentation that aids in the development and future maintenance of the API.

NEW QUESTION # 20

An organization's IT learn follows an API-led connectivity approach and must use Anypomt Platform to implement a System API that securely accesses customer data The organization uses Salesforce as the system of record for all customer data and its most important objective is to reduce the overall development time to release the System API The team's integration architect has identified four different approaches to access the customer data from within the implementation of the System API by using different Anypoint Connectors that all meet the technical requirements of the project Which approach should the team choose to meet the organization's objective to reduce the time to develop and release the System API?

- A. Use the Anypoint Connector for Salesforce to connect to the Salesforce APIs to directly access the customer data
- B. Use the Anypoint Connector for FTP to download a file containing a recent near-real time extract of the customer data
- C. Use the Anypoint Connector for HTTP to connect to the Salesforce APIs to directly access the customer data
- D. Use the Anypoint Connector for Database to connect to a MySQL database to access a copy of the customer data

Answer: A

Explanation:

In an API-led connectivity approach, using the most efficient method to access system data can significantly reduce development time. Here's why using the Anypoint Connector for Salesforce is the best approach:
* Direct Access:
* Salesforce APIs: The Anypoint Connector for Salesforce provides direct access to Salesforce APIs, allowing the System API to retrieve customer data efficiently and securely.
* No Middleware: Directly accessing Salesforce eliminates the need for intermediary steps, reducing complexity and potential points of failure.
* Reduced Development Time:
* Out-of-the-Box Functionality: The connector offers pre-built operations and functionalities tailored for Salesforce, speeding up development.
* Configuration Over Coding: Using the connector involves minimal configuration compared to coding custom integration logic, leading to faster implementation.
* Security:
* Built-in Security: The connector handles authentication and authorization, ensuring secure data access in line with Salesforce security protocols.
* Alternative Approaches:
* HTTP Connector: While functional, it requires more custom handling for Salesforce API interactions and error management.
* Database Connector: Accessing a database copy of Salesforce data may involve data synchronization challenges and does not provide real-time data.
* FTP Connector: Using FTP for data extracts is less efficient and introduces delays in accessing up-to-date information.

NEW QUESTION # 21

What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted AnypointPlatform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

- A. Reduced IT operations effort
- B. Increased application throughput
- C. Reduced application latency
- D. Reduced time-to-market for the first application
- E. increased application isolation

Answer: A,D

Explanation:

Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:
* Reduced Time-to-Market for the First Application:
* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.
* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.
* Reduced IT Operations Effort:
* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.
* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.

NEW QUESTION # 22

An organization needs to procure an enterprise software system to increase cross-selling opportunities and better track prospect data.
Which category of enterprise software has these core capabilities, when used for its typical and intended purpose?

- A. IT Service Management (ITSM)
- B. Business-to-Business (B2B)
- C. Supply Chain Management (SCM)
- D. Customer Relationship Management (CRM)

Answer: D

Explanation:
Customer Relationship Management (CRM) systems are designed to manage an organization's interactions with current and potential customers. Here's a detailed explanation:
* Core Capabilities:
* Cross-Selling Opportunities: CRM systems track customer interactions, preferences, and purchasing history, helping businesses identify opportunities for cross-selling and upselling.
* Prospect Data Management: CRM systems manage prospect information, track leads, and nurture relationships through the sales funnel.
* Typical Use:
* Sales Management: Helps sales teams manage and analyze customer interactions and data throughout the customer lifecycle.
* Marketing Automation: Assists in automating marketing campaigns, segmenting customer lists, and tracking campaign effectiveness.
* Customer Service: Provides tools for managing customer support cases, improving customer satisfaction, and retaining customers.
