CertJukenを手に入れるのは、ScrumのSSM認定試験に合格する鍵を手に入れるのに等しいです。CertJukenのScrumのSSM試験トレーニング資料は高度に認証されたIT領域の専門家の経験と創造を含んでいるものです。その権威性は言うまでもありません。あなたはうちのScrumのSSM問題集を購入する前に、CertJukenは無料でサンプルを提供することができます。

Scrum SSM (6.0) - SAFe® Scrum Master 認定 SSM 試験問題 (Q31-Q36):

質問 # 31

A team's Product Owner (PO) takes an unexpected leave of absence for the last week of the Iteration. Three of the team's stories have been completed and are waiting to be accepted. The Scrum Master asks the Product Manager (PM) to attend the Iteration Review and accept the stories. The PM responds that he is not familiar enough with the intent to feel comfortable accepting these responsibilities. He suggests keeping the Iteration open for an additional week and waiting for the PO to come back. What should the team's Scrum Master do?

- A. The Scrum Master should accept the stories after the team demonstrates the stories
- **B. Work with the Release Train Engineer to find a solution**
- C. Strongly urge the PM to attend the Demo and accept the stories
- D. Ask another PO in the Agile Release Train to accept the stories

正解: B

質問 # 32

What is one recommended practice for Scrum Masters/Team Coaches when coaching teams on presenting a draft plan at PI Planning?

- A. Secure support from other teams on how work will be shared and completed
- **B. Align on how the team will answer questions about their proposed objectives**
- C. Identify as many risks and dependencies as possible for the management review
- D. Ensure the team has Stories written for the first two Iterations of the increment

正解: B

解説:

One recommended practice for Scrum Masters/Team Coaches when coaching teams on presenting a draft plan at PI Planning is to align on how the team will answer questions about their proposed objectives. This practice helps the team to prepare for the feedback and input they will receive from the business owners, product management, and other teams and stakeholders during the draft plan review. The team should agree on who will present the objectives, how they will explain the business value and technical feasibility, and how they will handle any objections or concerns. The team should also rehearse their presentation and anticipate potential questions and scenarios. By aligning on how to answer questions, the team can increase their confidence and clarity, and demonstrate their commitment and alignment to the vision and goals of the ART.

質問 # 33

Three members of Team C created a new workflow to speed up the testing process. They spent an entire Iteration designing the process but discovered, just before implementation, that the system could not support the workflow. The rest of the team was excited to hear what was learned from the failed experiment. Which of the following characteristics of a high-performing Agile Team is Team C demonstrating?

- A. Mutual trust that allows for both healthy conflict and reliance on others
- B. Accountability to each other and the organization for reliably completing quality work
- C. Enjoying the work and working together
- **D. A safe environment for taking risks without fear of embarrassment or criticism**

正解: D

解説:

A safe environment for taking risks without fear of embarrassment or criticism is one of the characteristics of a high-performing Agile Team. A high-performing Agile Team is a cross-functional group of people that have everything, and everyone, necessary to produce a working, tested increment of product¹ They are empowered, collaborative, aligned, and committed to delivering value to the customers and the organization² One of the factors that enable a high-performing Agile Team is a safe environment where team members can experiment, learn, and grow without fear of failure, blame, or judgment³ A safe environment fosters a culture of innovation, creativity, and continuous improvement, as well as a sense of psychological safety, trust, and belonging among team members⁴ Team C is demonstrating this characteristic by creating a new workflow to speed up the testing process, even though it did not work out as expected. The rest of the team was excited to hear what was learned from the failed experiment, rather than being disappointed or critical. This shows that the team values learning over perfection, and supports each other in taking risks and trying new things.

質問 # 34

Team A works collaboratively on new functionality for a customer application. The acceptance criteria have each been minimally met.

Team A decides to release the functionality with a method for collecting direct customer feedback. Which of the following high-performing team characteristics is Team A demonstrating?

- **A. Using regular feedback loops built into the learning cycle**
- B. Taking appropriate risks without fear of failure
- C. Balancing abilities on the team with the challenge of the work

- D. Focusing on success over trying to avoid failures

正解: A

解説:

One of the high-performing team characteristics that Team A is demonstrating is using regular feedback loops built into the learning cycle. A high-performing Agile Team is a cross-functional group of people that have everything, and everyone, necessary to produce a working, tested increment of product¹. They are empowered, collaborative, aligned, and committed to delivering value to the customers and the organization¹. One of the factors that enable a high-performing Agile Team is using regular feedback loops to learn and improve. Feedback loops are mechanisms that provide the team with information about the outcomes and impacts of their actions, as well as the needs and expectations of their customers and stakeholders^{2,3}. Feedback loops help the team to validate their assumptions, measure their progress, and adjust their plans accordingly^{2,3}. Feedback loops also help the team to foster a culture of experimentation, innovation, and continuous improvement, as well as to increase customer satisfaction and loyalty^{2,3}. Team A is using regular feedback loops by releasing the functionality with a method for collecting direct customer feedback. This allows them to learn from the actual users of their product, and to incorporate their feedback into the next iteration of development. This way, they can deliver value faster and more effectively, as well as to enhance the quality and usability of their product⁴.
