Free PDF Quiz 2026 High-quality 156-836: Check Point Certified Maestro Expert - R81 (CCME) Test Score Report

Our 156-836 real dumps has received popular acceptance worldwide with tens of thousands of regular exam candidates who trust our proficiency. Up to now, the passing rate is 98 to 100 percent. What made our 156-836 study guide so amazing? The answer that we only supply the latest and valid 156-836 Exam Braindumps for our customers and first-class after-sales services come after the first-class 156-836 learning engine. We're also widely praised by our perfect services.

The Check Point Certified Maestro Expert (CCME) certification exam covers advanced topics related to Check Point Maestro, including its architecture, deployment, management, and troubleshooting. 156-836 Exam consists of 90 multiple-choice questions that must be completed within 120 minutes. The passing score for the exam is 70%, and it is available in multiple languages, including English, Chinese, Japanese, and Korean.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q58-Q63):

NEW QUESTION # 58

In a Maestro Dual Site environment, what is the definition of the term Active Site.

- A. The Active Site is the site where the SMO Master exists.
- B. There is no such thing as an active site. In a Dual Site environment, traffic is load balanced.
- C. The Active Site is the site that is not handling any traffic for the specific SG, but its connections are synced to its SGMs from the MHOs to be ready in the event of a failover.
- **D. The Active Site is the site currently handling the enforcement on traffic passing for a specific SG. Connections are synced within the SGMs in the Active Site.**

Answer: D

Explanation:

Explanation

In a Maestro Dual Site environment, there are two sites that can host Security Group Members (SGMs) for each Security Group (SG). The Active Site is the one that is currently processing the traffic for a specific SG, while the Standby Site is the one that is ready to take over in case of a failover. The Active Site and the Standby Site can be different for different SGs, depending on the load balancing and failover policies. The Active Site and the Standby Site are synchronized by the Maestro Orchestrators (MHOs) using the Site-Sync port and VLANs.

NEW QUESTION # 59

Where should `sx_api_ports_dump.py` command be ran?

- **A. Orchestrator**
- B. Management server
- C. Security Group
- D. SMO Appliance

Answer: A

Explanation:

The `sx_api_ports_dump.py` command should be run on the Orchestrator, which is the device that manages the communication and the configuration of the Security Groups and the SGMs. The command shows the port mapping and the traffic distribution for each Security Group, as well as the backplane bonds and the Orchestrator ports. The command does not work on the Management server, the Security Group, or the SMO Appliance, as they do not have the same role and functionality as the Orchestrator.

NEW QUESTION # 60

HealthCheck Point _____

- A. can be used to let you visualize the Firewall topology for the SG and view live statistics, which includes throughput, problem notes, and CPU utilization.
- B. is a self-updatable suite of tools for MHOs with the capability to assess the health of the system and provide a timeline of critical and informative events that might have occurred in a production system.
- C. performs a system health check and is meant to replace both a CPInfo and the health check script.
- **D. is a self-updatable suite of tools for SGMs with the capability to assess the health of the system, visualize the Firewall topology, provide a timeline of critical and informative events that might have occurred in a production system.**

Answer: D

Explanation:

HealthCheck Point (HCP) is a tool that can perform various tests and checks on the system components of the Security Group Modules (SGMs), such as hardware, software, network, clock, ARP, and more. It can also display the performance statistics of the

SGMs, such as throughput, packet rate, CPU utilization, memory usage, and more. Additionally, HCP can provide a graphical representation of the Firewall topology for the Security Group, showing the connections and statuses of the SGMs and the Orchestrators. Furthermore, HCP can generate a report of the critical and informative events that occurred on the system, such as configuration changes, errors, warnings, and alerts. HCP can help identify and troubleshoot any issues or errors that may affect the system functionality or performance.

NEW QUESTION # 61

What happens when you make changes from Clish on the SMO Master?

- **A. Changes are only applied on the SMO Master.**
- B. The changes are synchronized to the MHO as a backup.
- C. Changes are applied to all members in the SG.
- D. The changes are synchronized to the SMS/MDS as a backup.

Answer: A

Explanation:

NEW QUESTION # 62

Complete the sentence: Dual Orchestrators work as. _____

- **A. Active-Active cluster**
- B. Hot-Swap RAID
- C. Load Sharing cluster
- D. Active - Standby cluster

Answer: A

Explanation:

Dual Orchestrators work as an Active-Active cluster, which means that both Orchestrators are active and share the load of the traffic that is sent to and from the Security Group Members (SGMs). Active-Active cluster provides better performance and scalability than Active-Standby cluster, which only uses one Orchestrator at a time and keeps the other as a backup. Active-Active cluster also allows for faster failover and recovery in case of an Orchestrator failure, as the surviving Orchestrator can take over the traffic without interruption.
