2026 Juniper Marvelous JN0-232: Security, Associate (JNCIA-SEC) Valid Dumps Questions

You don't have to spend all your energy to the exam because our JN0-232 learning questions are very efficient. Only should you spend a little time practicing them can you pass the exam successfully. In addition, the passing rate of our JN0-232 Study Materials is very high, and we are very confident to ensure your success. And we can claim that our JN0-232 exam braindumps will help you pass the exam if you study with our JN0-232 practice engine.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q65-Q70):

NEW QUESTION # 65

Your company is acquiring a smaller company that uses the same private address range that your company currently uses in its North America division. You have a limited number of public IP addresses to use for the acquisition. You want to allow the new acquisition's users to connect to the existing services in North America.

Which two features would you enable on your SRX Series Firewall to accomplish this task? (Choose two.)

- A. IDP

- B. PAT
- C. BGP
- D. NAT

Answer: B,D

Explanation:

When two networks use the same private IP address ranges, conflicts occur. The solution is to use address translation techniques on the SRX:

* NAT (Network Address Translation): Translates private IP addresses to another IP range, enabling connectivity between overlapping private networks.

* PAT (Port Address Translation): Extends NAT by allowing multiple private IPs to share one or a few public IPs using different port numbers. This is especially useful when there is a limited pool of public IP addresses.

Other options:

* IDP (Option A): Intrusion Detection and Prevention, unrelated to address overlap.

* BGP (Option C): A routing protocol, but it does not solve overlapping IP addressing problems.

Correct Features: NAT and PAT

Reference: Juniper Networks - NAT and Address Overlap Solutions, Junos OS Security Fundamentals.

NEW QUESTION # 66

Which two settings does the host-inbound-trafficzone configuration parameter control?

(Choose two.)

- A. transit traffic
- B. protocols on the zone's logical interfaces
- C. exception traffic
- D. protocols on the zone's physical interfaces

Answer: B,D

Explanation:

The host-inbound-traffic parameter defines which protocols and services are allowed to reach the SRX device itself on both physical and logical interfaces belonging to a zone. This controls management and control-plane traffic (e.g., SSH, ping, SNMP) directed to the firewall, not transit traffic passing through it.

NEW QUESTION # 67

When does screening occur in the flow module?

- A. during policy lookup
- B. before session lookup
- C. during route lookup
- D. after session lookup

Answer: B

Explanation:

Screening in the flow module occurs before session lookup, allowing the device to drop unwanted or malicious traffic early in the processing path before any session is created.

NEW QUESTION # 68

You must ensure that sessions can only be established from the external device.

Referring to the exhibit, which type of NAT is being performed?

□

- A. static NAT and source NAT
- B. static PAT only
- C. destination NAT only
- D. source NAT only

Answer: C

Explanation:

Destination NAT allows inbound session initiation from the external network by translating the public (untrust) address to a private internal (trust) address, ensuring that sessions can only be established from the external device.

NEW QUESTION # 69

You want to confirm that your SRX Series Firewall is connected to the SBL server. Which operational mode command would you use in this scenario?

- A. show security utm anti-virus status
- B. show security web filtering status
- C. show security utm content-filtering statistics
- D. show security utm anti-spam status

Answer: B

Explanation:

The SBL (SurfControl Web Filtering) server integration is part of UTM web filtering on SRX. To confirm that the firewall is properly connected and communicating with the SBL server, the command used is:

```
show security web filtering status
```

This command displays connectivity information with the SBL server, license status, and filtering operations.

Other options:

- * Anti-virus (Option A) checks antivirus engine status.
- * Content-filtering statistics (Option C) shows local content filtering counters.
- * Anti-spam status (Option D) checks spam engine connectivity.

Correct Command: show security web filtering status

Reference: Juniper Networks - UTM Web Filtering Operational Commands, Junos OS Security Fundamentals.

NEW QUESTION # 70

.....

All the Itexamguide Juniper JN0-232 practice questions are real and based on actual Security, Associate (JNCIA-SEC) (JN0-232) exam topics. The web-based Security, Associate (JNCIA-SEC) (JN0-232) practice test is compatible with all operating systems like Mac, IOS, Android, and Windows. Because of its browser-based Security, Associate (JNCIA-SEC) (JN0-232) practice exam, it requires no installation to proceed further. Similarly, Chrome, IE, Firefox, Opera, Safari, and all the major browsers support the Security, Associate (JNCIA-SEC) (JN0-232) practice test.
