## Latest XSIAM-Analyst Latest Torrent Offers Candidates First-Grade Actual Palo Alto Networks Palo Alto Networks XSIAM Analyst Exam Products

Preparation from reliable material is essential to get success in the real Palo Alto Networks XSIAM Analyst (XSIAM-Analyst) exam. One of the most crucial aspects of test preparation is relying on Palo Alto Networks XSIAM Analyst (XSIAM-Analyst) exam dumps. The authenticity of Palo Alto Networks XSIAM Analyst (XSIAM-Analyst) exam questions material plays a huge role in achieving a passing score. In the case of choosing, Palo Alto Networks XSIAM Analyst (XSIAM-Analyst) exam dumps outdated material, and one fails and loses resources. Prep4King is committed to providing real XSIAM-Analyst Questions, ensuring that applicants get success in a short time.

### Palo Alto Networks XSIAM Analyst Sample Questions (Q128-Q133):

#### NEW QUESTION # 128

An alert triggered by the XDR Agent includes registry changes, suspicious child processes, and script execution. What source types and logic apply here?

(Choose two)

Response:

- A. BIOC behavioral logic
- B. IOC match logic
- C. Endpoint telemetry collection

- D. Correlation rule chaining

**Answer: A,C**

#### NEW QUESTION # 129

Match each XDM type with the type of data it organizes:

XDM Type

- A) xdm.network\_traffic
- B) xdm.endpoint\_alert
- C) xdm.process
- D) xdm.file\_event

Data Organized

- 1. Communication details between hosts
- 2. Alert data from XDR agent or third-party systems
- 3. Executed process and command-line activity
- 4. File read/write, access, and creation actions

Response:

- A. A-4, B-2, C-3, D-1
- **B. A-1, B-2, C-3, D-4**
- C. A-1, B-3, C-2, D-4
- D. A-1, B-4, C-3, D-2

**Answer: B**

#### NEW QUESTION # 130

While investigating an incident on the Incident Overview page, an analyst notices that the playbook encountered an error. Upon playbook work plan review, it is determined that the error was caused by a timeout. However, the analyst does not have the necessary permissions to fix or create a new playbook.

Given the critical nature of the incident, what can the analyst do to ensure the playbook continues executing the remaining steps?

- A. Contact TAC to resolve the task error, as the playbook cannot proceed without it
- B. Clone the playbook, remove the faulty step and run the new playbook to bypass the error
- **C. Pause the step with the error, thus automatically triggering the execution of the remaining steps.**
- D. Navigate to the step where the error occurred and run the task again

**Answer: C**

Explanation:

The correct answer is D - Pause the step with the error, thus automatically triggering the execution of the remaining steps.

When a playbook encounters an error and the analyst does not have permissions to modify or recreate the playbook, the recommended action is to pause the step with the error. This will skip the problematic step and allow the remaining steps of the playbook to execute, ensuring the investigation or response continues.

"Pausing a failed step in the playbook work plan allows the remaining steps to continue executing, useful when immediate playbook edits are not possible due to permission restrictions." Document Reference: XSIAM Analyst ILT Lab Guide.pdf Page: Page 39 (Automation section)

#### NEW QUESTION # 131

You're reviewing suspicious IPs imported from VirusTotal. Which two XSIAM actions are valid next steps?

Response:

- **A. Create a block rule**
- B. Update browser cache
- **C. Enrich incidents with the indicator**
- D. Use syslog to flush logs

**Answer: A,C**

### NEW QUESTION # 132

A threat hunter discovers a true negative event from a zero-day exploit that is using privilege escalation to launch "Malware.pdf.exe". Which XQL query will always show the correct user context used to launch "Malware.pdf.exe"?

- A. `config case_sensitive = false | datamodel dataset = xdrdata | filter xdm.source.process.name = "Malware.pdf.exe" | fields xdm.target.user.username`
- B. `config case_sensitive = false | dataset = xdr_data | filter event_type = ENUM.PROCESS | filter action_process_image_name = "Malware.pdf.exe" | fields causality_actor_effective_username`
- C. `config case_sensitive = false | dataset = xdr_data | filter event_type = ENUM.PROCESS | filter action_process_image_name = "Malware.pdf.exe" | fields action_process_username`
- D. `config case_sensitive = false | dataset = xdr_data | filter event_type = ENUM.PROCESS | filter action_process_image_name = "Malware.pdf.exe" | fields actor_process_username`

**Answer: B**

Explanation:

The correct answer is A- the query using the field `causality_actor_effective_username`.

When analyzing events where privilege escalation is used, it is essential to identify the original effective user that initiated the causality chain, not merely the process's own running user (as provided by other fields). The

`fieldcausality_actor_effective_username` specifically provides the effective username context of the actor behind the entire chain of actions that resulted in launching the suspicious executable.

Explanation of fields from Official Document:

\* `causality_actor_effective_username`: This field indicates the original effective user who started the entire causality chain.

\* `actor_process_username` and `action_process_username`: These fields indicate the immediate process username, not necessarily reflecting the correct original context when privilege escalation occurs.

Therefore, to always identify the correct user context in privilege escalation scenarios, option A is the verified correct answer.

### NEW QUESTION # 133

.....

If you are troubled with XSIAM-Analyst exam, you can consider down our free demo. You will find that our latest XSIAM-Analyst exam torrent are perfect paragon in this industry full of elucidating content for exam candidates of various degree to use. Our results of latest XSIAM-Analyst Exam Torrent are startlingly amazing, which is more than 98 percent of exam candidates achieved their goal successfully. That also proved that XSIAM-Analyst Test Dumps ensures the accuracy of all kinds of learning materials is extremely high.
