## JN0-105 Top Dumps | JN0-105 Valid Study Materials

TestValid is a reputable and highly regarded platform that provides comprehensive preparation resources for the Junos, Associate (JNCIA-Junos) (JN0-105). For years, TestValid has been offering real, valid, and updated JN0-105 Exam Questions, resulting in numerous successful candidates who now work for renowned global brands.

## Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
-------	---------

Topic 1	<ul style="list-style-type: none"> <li>• Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li> </ul>

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q47-Q52):

### NEW QUESTION # 47

What is the primary system log file that is present in the default configuration of a Junos device?

- A. messages
- B. vrrp
- C. jsrpd
- D. kmd

**Answer: A**

Explanation:

In the default configuration of a Junos device, the primary system log file is "messages" (B). This log file contains a wide range of system messages, including operational status changes, system errors, and other critical information, making it a key resource for troubleshooting and monitoring the system's health.

### NEW QUESTION # 48

What is the protocol data unit (PDU) of the Data Link Layer?

- A. byte
- B. segment
- C. frame
- D. bit

**Answer: C**

Explanation:

In the OSI model, the Data Link Layer is responsible for node-to-node delivery of data. It frames the packets received from the Network Layer and prepares them for physical transmission. The Protocol Data Unit (PDU) for the Data Link Layer is called a "frame." Frames encapsulate the network layer packets, adding a header and a trailer that include the hardware addresses of the source and destination, among other things, facilitating the data link layer services like frame synchronization, flow control, and error checking.

### NEW QUESTION # 49

What are two types of transit traffic that traverse the forwarding plane of a Layer 3 router? (Choose two.)

- A. unicast traffic
- B. multicast traffic
- C. exception traffic
- D. broadcast traffic

**Answer: A,B**

Explanation:

Transit traffic that traverses the forwarding plane of a Layer 3 router includes both unicast and multicast traffic types. Unicast traffic is directed from a single source to a single destination, while multicast traffic is sent from one source to multiple destinations that are

part of a multicast group. These types of traffic are efficiently routed through the network by leveraging the router's forwarding plane capabilities. Exception traffic, which requires special handling by the control plane, and broadcast traffic, which is typically limited to a single broadcast domain and not usually forwarded by Layer 3 routers, are not considered standard types of transit traffic for the forwarding plane of a router.

#### NEW QUESTION # 50

Which statement is correct when multiple users are configuring a Junos device using the configure private command?

- A. Each user shares the same candidate configuration.
- B. A commit will not succeed until there is only a single user in configuration mode.
- C. A commit by any user will commit changes made by all active users.
- **D. Each user gets their own candidate configuration.**

**Answer: D**

Explanation:

When multiple users are configuring a Junos device using the "configure private" command, each user gets their own candidate configuration (C). This allows for isolated configuration sessions, where changes made by one user do not impact or interfere with the changes made by another user in their private session.

#### NEW QUESTION # 51

Which type of device uses the destination IP address to forward packets?

- **A. Layer 3 router**
- B. Layer 2 switch
- C. repeater
- D. hub

**Answer: A**

Explanation:

A Layer 3 router uses the destination IP address to forward packets. The correct answer is A. Routers operate at Layer 3 of the OSI model and make forwarding decisions based on IP addresses. They are responsible for routing packets across different networks by examining the destination IP address contained in the packet's header.

#### NEW QUESTION # 52

.....

We aim to provide the best service for our customers, and we demand of ourselves and our after sale service staffs to the highest ethical standard, and our JN0-105 study guide and compiling processes will be of the highest quality. We play an active role in making every country and community in which we selling our JN0-105 Practice Test a better place to live and work. That is to say, if you have any problem after JN0-105 exam materials purchasing, you can contact our after sale service staffs anywhere at any time on our JN0-105 study guide. And our staffs are only waiting for you online.
