### PMI Cognitive Project Management in AI CPMAI v7 - Training & Certification Exam Sample Questions (Q85-Q90):

#### NEW QUESTION # 85

During which phase of an AI project should you consider Trustworthy AI considerations?

- A. Phase VI: Model Operationalization
- B. Every Phase of the AI project**
- C. Phase I: Business Understanding
- D. Phase II: Data Understanding

**Answer: B**

Explanation:

CPMAI's Domain VI: Trustworthy AI is designed to span the entire project lifecycle, embedding ethics, transparency, fairness, privacy, and security checks into every phase-from Business Understanding through Operationalization-so that trustworthy practices are not an afterthought but a continuous, integrated activity .

#### NEW QUESTION # 86

You're running an image recognition project and realize that you do not have enough data of a certain type of vehicle. What is the best course of action to get the additional labeled data you need?

- A. Perform Data Sampling
- B. Perform Data Anonymization
- C. Purchase the data from a third party
- D. Perform Data Transformation & Multiplication**

**Answer: D**

Explanation:

In CPMAI v7's Phase III: Data Preparation, teams are instructed to construct the final modeling dataset through a variety of enhancement activities-including data augmentation, which specifically covers transforming existing records or generating entirely new records to increase volume and variety. This "augmentation" is described as "constructive data preparation operations such as the production of derived attributes or entire new

records, or transformed values for existing attributes".

Moreover, under the Training & Test Data Requirements task, the Workbook explicitly asks project teams to determine "What transformation or multiplication activities can be done to increase training data volume while maintaining quality". Performing data transformation (e.g., image rotations, color jitter, cropping) and multiplication (synthetic record generation) directly addresses the lack of labeled samples without incurring the cost or delay of third-party purchases, making option B the correct approach.

#### NEW QUESTION # 87

As an organization building an AI solution for your current customers based in NYC, but with possible plans for future expansion, how should you handle worldwide AI laws and regulations?

- A. Make sure to follow relevant data, privacy, and other important laws as it pertains to NYC
- B. Make sure to follow relevant data, privacy, and other important laws as it pertains to the United States
- C. You're too small of an organization to be worried about laws at the moment
- **D. Make sure to follow relevant data, privacy, and other important laws both in the US and where you're likely to expand to in the coming year**

**Answer: D**

Explanation:

CPMAI's Trustworthy AI - Navigating AI Regulations and Frameworks tasks require continuously monitoring "AI-relevant data privacy laws and regulations" both where you operate today and where you plan to expand. Furthermore, the Workbook's Task: Required Compliance with Regulations and Laws instructs teams to identify all laws and regulations that might apply based on location, industry, and other factors, ensuring legal and liability risks are addressed before operationalization.

#### NEW QUESTION # 88

Clean, well-labeled datasets used for machine learning are partitioned into three subsets: Training sets, Validation sets, and Test sets. As your team is doing this, what's the best way to split up this data?

- **A. Split by random subsampling**
- B. Use the same data for all sets
- C. Split by alphabetical order
- D. Split by patterned subsampling

**Answer: A**

Explanation:

CPMAI's glossary defines data splitting as "dividing a data set into subsets (e.g., training, validation, test) for model development and evaluation," typically achieved via random subsampling to ensure each subset is representative of the underlying distribution and to prevent sampling bias.

#### NEW QUESTION # 89

Your team has been asked to summarize and highlight patterns in historical purchasing data, identifying prior performance metrics and patterns. What type of analytics is most appropriate to apply for this need?

- A. Predictive Analytics
- **B. Descriptive Analytics**
- C. Diagnostic Analytics
- D. Projective Analytics

**Answer: B**

Explanation:

Descriptive analytics focuses on summarizing and reporting on past data—exactly what's needed to highlight historical purchasing patterns and performance metrics. The CPMAI Glossary defines analytics as "the use of statistical and computational methods to extract meaningful insights from data (related: predictive, descriptive, ...)" where descriptive analytics provides the retrospective view.
