## SAP Certified Associate - Security Administrator Sample Questions (Q72-

## Q77):

### NEW QUESTION # 72

Which archiving objects are relevant for archiving change documents for user master records? Note: There are 2 correct answers to this question.

- A. US\_PROF
- B. US\_USER
- C. US\_PASS
- D. US\_AUTH

**Answer: B,C**

Explanation:

In SAP systems, archiving change documents for user master records involves specific archiving objects to manage historical data efficiently. The archiving object US\_PASS is used to archive changes related to user passwords, such as password resets or updates, which are critical for tracking user account modifications.

Similarly, US\_USER is used to archive changes to user master records, including details like user IDs, names, and group assignments, ensuring a comprehensive record of user profile modifications. These objects allow administrators to store historical data securely while freeing up system resources. In contrast, US\_AUTH is related to authorization assignments, not user master record changes, and US\_PROF deals with profile assignments, which are separate from user master data. By using US\_PASS and US\_USER, SAP ensures that changes to sensitive user information are preserved for audit and compliance purposes, supporting security governance in large-scale SAP environments. This archiving process helps maintain system performance while retaining essential historical data for regulatory and forensic analysis.

### NEW QUESTION # 73

What authorization object can be used to authorize an administrator to create specific authorizations in roles?

- A. S\_USER\_TCD
- B. S\_USER\_AGR
- C. S\_USER\_VAL
- D. S\_USER\_AUT

**Answer: D**

Explanation:

The S\_USER\_AUT authorization object allows administrators to create or modify specific authorizations within roles. This ensures granular control over what authorizations an administrator can define, maintaining adherence to security policies.

Key Fields in S\_USER\_AUT:

- \* ACTVT (Activity): Determines if the administrator can create, change, or display authorizations.
- \* AUTH (Authorization): Specifies the exact authorizations that can be created or modified.
