Dumps 305-300 Torrent, 305-300 Reliable Test Testking

Life is short for each of us, and time is precious to us. Therefore, modern society is more and more pursuing efficient life, and our 305-300 Study Materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests, including the qualification examinations we now face. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained?

Lpi 305-300: LPIC-3 Exam 305: Virtualization and Containerization is a certification exam that tests the skills and knowledge of IT professionals in virtualization and containerization technologies. 305-300 Exam is designed for professionals who want to demonstrate their expertise in the implementation and management of virtualization and containerization solutions.

Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q94-Q99):

NEW QUESTION # 94

What is the purpose of the command `vagrant init`?

- A. It installs Vagrant on a Linux host.
- B. It executes a provisioning tool in a running box.
- C. It starts a Vagrant box.
- **D. It creates a Vagrant configuration file.**
- E. It downloads a Vagrant box.

Answer: D

NEW QUESTION # 95

Which of the following statements in a Dockerfile leads to a container which outputs hello world? (Choose two.)

- A. ENTRYPOINT "echo Hello World"
- B. ENTRYPOINT ["echo hello world"]
- C. ENTRYPOINT ["echo", "hello", "world"]
- D. ENTRYPOINT echo Hello World
- E. ENTRYPOINT "echo", "Hello", "World"

Answer: B,C

Explanation:

The ENTRYPOINT instruction in a Dockerfile specifies the default command to run when a container is started from the image. The ENTRYPOINT instruction can be written in two forms: exec form and shell form. The exec form uses a JSON array to specify the command and its arguments, such as ["executable",

"param1", "param2"]. The shell form uses a single string to specify the command and its arguments, such as

"executable param1 param2". The shell form is converted to the exec form by adding /bin/sh -c to the beginning of the command.

Therefore, the following statements in a Dockerfile are equivalent and will lead to a container that outputs hello world:

ENTRYPOINT ["echo hello world"] ENTRYPOINT ["/bin/sh", "-c", "echo hello world"] ENTRYPOINT

"echo hello world" ENTRYPOINT ["echo", "hello", "world"] ENTRYPOINT ["/bin/sh", "-c", "echo",

"hello", "world"] ENTRYPOINT "echo hello world"

The other statements in the question are invalid or incorrect. The statement A. ENTRYPOINT "echo Hello World" is invalid because it uses double quotes to enclose the entire command, which is not allowed in the shell form. The statement D.

ENTRYPOINT echo Hello World is incorrect because it does not use quotes to enclose the command, which is required in the shell form. The statement E. ENTRYPOINT "echo", "Hello",

"World" is invalid because it uses double quotes to separate the command and its arguments, which is not allowed in the exec form.

NEW QUESTION # 96

Which statement is true regarding the Linux kernel module that must be loaded in order to use QEMU with hardware virtualization extensions?

- A. It must be loaded into the kernel of the first virtual machine as it interacts with the QEMU bare metal hypervisor and is required to trigger the start of additional virtual machines
- B. It must be loaded into the kernel of each virtual machine to provide Para virtualization which is required by QEMU.
- C. It must be loaded into the kernel of each virtual machine that will access files and directories from the host system's file system.
- D. It must be loaded into the Kernel of the host system in order to use the visualization extensions of the host system's CPU
- E. It must be loaded into the kernel of the host system only if the console of a virtual machine will be connected to a physical console of the host system

Answer: D

NEW QUESTION # 97

Which of the following restrictions is true when using KVM with User Networking?

- A. Virtual machines cannot use ICMP
- B. Virtual machines can communicate with the host system and with other virtual machines using User Networking
- C. Virtual machines are restricted to only use IPv6 and not IPv4
- D. Virtual machines can only communicate with other virtual machines but not with the host system

Answer: A

Explanation:

KVM User Networking (SLIRP) provides basic network connectivity without requiring root privileges or bridge configuration. According to QEMU/KVM documentation, one key limitation is that ICMP (ping) is not supported. User Networking allows outbound TCP/UDP connections but restricts inbound connections and ICMP traffic. Therefore, C is the correct answer.

NEW QUESTION # 98

FILL BLANK

What is the default path to the Docker daemon configuration file on Linux? (Specify the full name of the file, including path.)

Answer:

Explanation:

/etc/docker/daemon.json
