

of advantages about the online version of the DA0-001 Study Materials from our company. For instance, the online version can support any electronic equipment and it is not limited to all electronic equipment.

The CompTIA Data+ Certification Exam certification is recognized by organizations around the world, which means that certified professionals are well-positioned to advance their careers and pursue new opportunities. CompTIA Data+ Certification Exam certification also provides employers with a way to assess the skills and knowledge of job candidates, which can help them make more informed hiring decisions.

CompTIA Data+ Certification Exam Sample Questions (Q91-Q96):

NEW QUESTION # 91

Given the table below:

		Conclusion from statistical analysis	
		Accept null	Reject null
True state of nature	Null hypothesis is true	1	2
	Null hypothesis is false	3	4

Which of the following boxes indicates that a Type II error has occurred?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

A Type II error is a false negative conclusion, which means failing to reject a null hypothesis that is actually false. In the table, box 3 indicates that a Type II error has occurred, because it shows that the null hypothesis is accepted when it is false in reality. This means that the statistical test failed to detect a significant difference or relationship that actually exists. NEW QUESTION # 92

An analysts building a monthly report for production and wants to ensure the audience is aware of its once-a-month cadence. Which of the following is the MOST important to convey that information?

- A. A report summary
- B. Frequently asked questions
- **C. The date of the dashboard build**
- D. The data refresh date

Answer: C

Explanation:

Explanation

This is because the date of the dashboard build is the most important component to convey that information, which is the once-a-month cadence of the monthly report for production. The date of the dashboard build can convey that information by indicating when the dashboard was created or updated, as well as showing the frequency or interval of the dashboard creation or update. For example, the date of the dashboard build can convey that information by displaying a date format that includes the month and year, such as January 2020, February 2020, etc., or by displaying a text format that includes the word "monthly", such as Monthly Report for Production - January 2020, Monthly Report for Production - February 2020, etc. The other components are not the most important components to convey that information. Here is why:

The data refresh date is a component that indicates when the data on the dashboard was refreshed or retrieved from the source or system, such as a database, a cloud service, or a web application. The data refresh date does not convey that information, but rather conveys how current or up-to-date the data on the dashboard is.

A report summary is a component that provides an overview or a highlight of the main findings or insights from the dashboard, such as key metrics, indicators, or trends. A report summary does not convey that information, but rather conveys what the dashboard is about or what it shows.

Frequently asked questions is a component that provides answers or explanations to common or expected questions from the

audience or users of the dashboard, such as how to use or interpret the dashboard, what are the assumptions or limitations of the dashboard, etc. Frequently asked questions does not convey that information, but rather conveys how to understand or interact with the dashboard.

NEW QUESTION # 93

A data analyst is creating a dashboard and trying to identify the type of information that should be included. Which of the following should the analyst consider first?

- A. Data refresh rate
- **B. Data sources and attributes**
- C. Access permissions
- D. Consumer types

Answer: B

Explanation:

The answer is D. Data sources and attributes.

Short explanation: The data analyst should consider the data sources and attributes first when creating a dashboard, because they determine what kind of information can be included and how it can be displayed. The data sources and attributes define the origin, quality, format, and structure of the data that will be used for the dashboard. They also affect the data refresh rate, the consumer types, and the access permissions of the dashboard12 A) Data refresh rate is not the first thing to consider, because it depends on the data sources and attributes. The data refresh rate is how often the data in the dashboard is updated or refreshed to reflect the latest changes. The data refresh rate can vary depending on the type, frequency, and availability of the data sources1 B) Consumer types are not the first thing to consider, because they depend on the data sources and attributes. The consumer types are the intended audiences or users of the dashboard, who may have different needs, preferences, and expectations for the dashboard. The consumer types can influence the design, layout, and functionality of the dashboard. However, the consumer types cannot be determined without knowing what kind of data is available and relevant for them1 C) Access permissions are not the first thing to consider, because they depend on the data sources and attributes. The access permissions are the rules or policies that govern who can view, edit, or share the dashboard. The access permissions can protect the confidentiality, integrity, and availability of the data in the dashboard. However, the access permissions cannot be set without knowing what kind of data is involved and who needs to access it1

NEW QUESTION # 94

What's the minimum passing score on the Data+ exam?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

NEW QUESTION # 95

Given the following grocery store orders:

Order_ID	Order_total
85495	\$132.49
28597	\$108.99
57490	\$96.19
35806	\$74.49
18014	\$178.59
39725	\$41.99
20935	\$136.99
25402	\$31.29
85023	\$24.49
27933	\$76.99

If a query is made to the table with the following logic:

Order_Total > 132 OR (Order_Total >= 25 AND Order_Total < 74)

Which of the following is the number of orders that will be returned by the query?

- A. Five
- B. Four
- C. Six
- D. Seven

Answer: C

Explanation:

Based on the query logic provided: Order_Total > 132 OR (Order_Total >= 25 AND Order_Total < 74), we can manually determine which order totals fit this criteria. By examining the image, these are the Order_Total values that match:

- * 132.49 (greater than 132)
- * 108.99 (greater than or equal to 25 and less than 74)
- * 96.19 (greater than or equal to 25 and less than 74)
- * 74.49 (greater than or equal to 25 and less than 74)
- * 41.99 (greater than or equal to 25 and less than 74)
- * 31.29 (greater than or equal to 25 and less than 74)

Thus, six orders satisfy the given conditions.
