

PL-600 Exam Brain Dumps | Exam PL-600 Testking

P.S. Free 2026 Microsoft PL-600 dumps are available on Google Drive shared by ValidDumps: <https://drive.google.com/open?id=1oftwwN1IFS8KUPo6W7pauzAJ0oMGil8D>

In order to meet the demands of all the customers, we can promise that we will provide all customers with three different versions of the PL-600 study materials. In addition, we can make sure that we are going to offer high quality practice study materials with reasonable prices but various benefits for all customers. It is our sincere hope to help you Pass PL-600 Exam by the help of our PL-600 study materials.

Microsoft PL-600 Certification Exam is designed for professionals who have a deep understanding of the Microsoft Power Platform and its capabilities. PL-600 exam validates the skills and knowledge required to design, build, and implement solutions that leverage the Power Platform to meet business requirements. Microsoft Power Platform Solution Architect certification exam measures the candidate's ability to create and configure Power Apps, Power Automate, Power BI, and Power Virtual Agents, as well as the ability to integrate these solutions with other Microsoft technologies.

Updated Microsoft PL-600 exam practice material in 3 different formats

If you prefer to practice your PL-600 training materials on paper, then our PL-600 exam dumps will be your best choice. PL-600 PDF version is printable, and you can print them into hard one, and you can take them with you, and you can also study them anywhere and any place. Besides, PL-600 test materials are compiled by professional expert, therefore the quality can be guaranteed. You can obtain the download link and password for PL-600 exam materials within ten minutes, and if you don't receive, you can contact us, and we will solve this problem for you.

Microsoft Power Platform Solution Architect Sample Questions (Q157-Q162):

NEW QUESTION # 157

You need to recommend methods to resolve the organization's issues.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Issue	Resolution method
Users cannot see Power BI reports.	▼ Add users to Microsoft 365. Assign Power BI licenses to users. Configure an on-premises data gateway.
Historical data does not appear in reports.	▼ Configure Azure Data Lake. Configure a custom connector. Configure an on-premises data gateway.

Answer:

Explanation:

Issue	Resolution method
Users cannot see Power BI reports.	▼ Add users to Microsoft 365. Assign Power BI licenses to users. Configure an on-premises data gateway.
Historical data does not appear in reports.	▼ Configure Azure Data Lake. Configure a custom connector. Configure an on-premises data gateway.

Explanation

Graphical user interface, text, application, chat or text message Description automatically generated

Issue	Resolution method
Users cannot see Power BI reports.	▼ Add users to Microsoft 365. Assign Power BI licenses to users. Configure an on-premises data gateway.
Historical data does not appear in reports.	▼ Configure Azure Data Lake. Configure a custom connector. Configure an on-premises data gateway.

Box 1: Add users to Microsoft 365.

Scenario: Users cannot view Power BI reports within the Power Platform apps.

Issue: The people you share with may see a locked tile in a dashboard, or a "Permission required" message when they try to view a

report.

Solution: You need to grant them permission to the underlying dataset.

Go to the All or the Datasets + dataflows tab in your content list.

Select More options (...) next to a dataset, then select Manage permissions.

Select Add user.

Enter the full email addresses for individuals, distribution groups, or security groups.

Select Grant access.

Box 2: Configure an on-premises data gateway.

Scenario: The company plans to reference historical data in the [on-premises] existing system. The records held in these systems will not be migrated to the new solution except for medication information.

The on-premises data gateway acts as a bridge to provide quick and secure data transfer between on-premises data (data that isn't in the cloud) and several Microsoft cloud services. These cloud services include Power BI, PowerApps, Power Automate, Azure Analysis Services, and Azure Logic Apps. By using a gateway, organizations can keep databases and other data sources on their on-premises networks, yet securely use that on-premises data in cloud services.

Topic 3, Fabrikam, inc.

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Fabrikam, Inc. manufactures industrial metal cutting machines. The company installs and services the machines for customers. Fabrikam has manufacturing plants in Canada, France, and China. The company also has regional service organizations that are responsible for installation and maintenance of the machines.

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes. The company has been experiencing quality issues associated with its manufacturing operations and installations.

The company wants to implement a way to capture quality inspection results for each machine produced.

Current inspection checklists are stored in the Files section of a Teams channel for inspectors. Inspectors commonly print the incorrect inspection checklist.

The company has specific inspection stations for certain inspection steps. Each station has the gauges and equipment required for related inspection steps. There is often a backlog at specific inspection stations. This results in delays in shipping machines to customers.

Accounting system

The current system does not handle shop floor or manufacturing planning functionality.

Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

Other systems

The company has an enterprise Microsoft 365 subscription. The company uses Microsoft 365 only for sending and receiving email.

The company uses photos of employees to generate employee badges.

Photos are uploaded into Microsoft 365 user profiles.

The company recently started using Dynamics 365 Field Service to manage and maintain the machines that it installs for its customers. The app has not been customized.

The company has added roles, skills, and certification proficiencies to Dynamics 365 Field Service resources to support both

customer onsite inspections and final manufacturing inspections.

Requirements

Quality inspection app

Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

Inspection orders

Inspection orders must:

Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.

Include information about the person who performed each inspection step and any comments made by the inspector.

Be automatically marked as failed if one inspection step rating is marked as failed.

Be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Inspectors must fill in findings comments and upload at least one photo for any inspection step that is marked as failed.

Inspection standardization

Standardized checklists must be stored in the solution for use by inspectors. A copy must be created when a new inspection is initiated. The solution must:

Prevent an inspector from proceeding to the next step of the checklist until required information for a step is entered.

Support the addition of steps to inspections to support custom features added to a machine for a customer.

Support the direct input of measurements from testing gauges to avoid incorrect readings being entered by inspectors.

Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.

Support the ability to store photo references within each inspection step to document defects found during inspections.

Security

Users must be active employees of Fabrikam.

When a user signs into the inspection solution, the solution must display a picture of the employee who has signed in.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

You must prevent users from changing inspection order data once an inspection is marked as final.

Analytics and reporting

The solution must:

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

Provide a printed quality certificate to be included with each machine.

Issues

During initial testing of the solution, testers report that they cannot see the photos taken during a previously failed inspection.

NEW QUESTION # 158

You are designing a model-driven app for a hospital. The app will be used to track teams at the hospital including:

Team	Comments
Cleaning	There are three predetermined cleaning teams. Tasks are assigned to a team. Anyone on the team can complete an assigned task.
Emergency room	These teams are formed as needed based on patient needs and staff availability.
Billing	These teams are assigned to specific hospital departments. Team members must only see data for the hospital department to which they are assigned.

You need to recommend the team types to use.

Which team types should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Team type
Cleaning teams	▼ Access Owner
Emergency room teams	▼ Access Owner
Billing teams	▼ Access Owner

Answer:

Explanation:

Requirement	Team type
Cleaning teams	▼ Access Owner
Emergency room teams	▼ Access Owner
Billing teams	▼ Access Owner

Explanation:

Box 1: Owner team

Owner team: An owner team owns records and has security roles assigned to the team. A user's privileges can come from their individual security roles, those of the teams that they're part of or the ones they inherit. A team has full access rights on the records that the team owns. Team members are added manually to the owner team.

Box 2: Access team

Access team: An access team doesn't own records and doesn't have security roles assigned to the team. The team members have privileges defined by their individual security roles and by roles from the teams they're members of. These members share records with an access team, and the team is granted access rights to the records. Access rights include Read, Write, and Append.

Box 3: Owner team

<https://docs.microsoft.com/en-us/power-platform/admin/manage-teams>

NEW QUESTION # 159

You need to recommend methods for assigning security to each group of users.

The customer provides the following requirements:

Customers need the ability to submit a case through an online portal.

Portal must handle 75 concurrent users submitting cases.

Service data must be retained for at least six years.

You need to determine which requirements are functional or non-functional.

Which requirements are functional or non-functional? To answer, drag the appropriate types to the correct requirements. Each type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Types	Requirement	Type
☐ Functional	Customers need the ability to submit a case through an online portal.	
☐ Non-functional	Portal must handle 75 current users submitting cases.	
	Service data must be retained for at least six years.	

Answer:

Explanation:

Types	Requirement	Type
☒ Functional	Customers need the ability to submit a case through an online portal.	<input checked="" type="text"/> Functional
☒ Non-functional	Portal must handle 75 current users submitting cases.	<input checked="" type="text"/> Non-functional
	Service data must be retained for at least six years.	<input checked="" type="text"/> Non-functional

Reference:

<https://docs.microsoft.com/en-us/learn/modules/work-with-requirements/4-non-functional-requirements>

NEW QUESTION # 160

You are designing the data model for a school. The school wants to track students' enrollments in courses.

The system must meet the following requirements:

Track the courses in which each student is enrolled.

Track the students that are enrolled in each course.

Track dates when each student enrolled in each course and the person who approved the enrollment.

Allow users to create a report that details which students are enrolled in which courses.

You need to recommend a data model that will fit the school's requirements.

Which logical model should you recommend?

- A. Option D
- **B. Option A**
- C. Option C
- D. Option B

Answer: B

Explanation:

Need a relationship table.

N:N (Many-to-Many): A table relationship that depends on a special Relationship table, sometimes called an Intersect table, so that many rows of one table can be related to many rows of another table.

When viewing rows of either table in a N:N relationship you can see a list of any rows of the other table that are related to it.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-entity-relationships>

NEW QUESTION # 161

A company plans to deploy multiple Microsoft Dataverse environments. You are supporting the go-live process.

The company reports the following access issues:

- * Users can access account records but cannot read a column in the table.
- * A licensed user receives an insufficient permission error when opening leads.
- * A licensed user does not appear in the list of users available for security assignment.

You need to resolve the issues.

What should you do? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point.

Answer Area

Issue	Action
Users can access account records but cannot read a column in the table.	☐ Security role ☐ Security group ☐ Field security profile
A licensed user receives an insufficient permission error when opening leads.	☐ Security role ☐ Security group ☐ Field security profile
A licensed user does not appear in the list of users available for security assignment.	☐ Security role ☐ Security group ☐ Field security profile

Answer:

Explanation:
Answer Area

Issue	Action
Users can access account records but cannot read a column in the table.	Security role Security group Field security profile
A licensed user receives an insufficient permission error when opening leads.	Security role Security group Field security profile
A licensed user does not appear in the list of users available for security assignment.	Security role Security group Field security profile

Explanation:

Graphical user interface, text, application, email Description automatically generated

Issue  **Action**

Users can access account records but cannot read a column in the table.

▼

Security role

Security group

Field security profile

A licensed user receives an insufficient permission error when opening leads.

▼

Security role

Security group

Field security profile

A licensed user does not appear in the list of users available for security assignment.

▼

Security role

Security group

Field security profile
